Foreword xxxiii

Preface xxxvii

1 Introduction 1
Jacqueline Lenoble, Lorraine A. Remer, and Didier Tanré
1.1 What are aerosols? 1
1.2 Why are we interested in aerosols? 7
1.3 How can we observe aerosols? 9
1.4 Objective and organization of the book 10

2 Absorption and scattering by molecules and small particles 13
Jacqueline Lenoble, Michael I. Mishchenko, and Maurice Herman
2.1 Introduction 13
2.2 Atmospheric molecular absorption 14
2.3 Definitions: Extinction, scattering, absorption, and phase function 15
2.4 Polarization and scattering matrix 19
2.4.1 The Stokes parameters 19
2.4.2 Scattering matrix 23
2.5 Molecular scattering: Rayleigh theory 25
2.6 Lorentz-Mie theory 26

2.7 Nonspherical particles: Theory and measurements 29
2.7.1 Numerically-exact and approximate theoretical techniques 30
2.7.2 Measurement techniques 35
2.8 Illustrative theoretical and laboratory results 37

3 Radiative transfer in the Earth's atmosphere 53
Jacqueline Lenoble, and Maurice Herman
3.1 Introduction 53
3.2 The scalar and the vector equations of transfer 54
3.2.1 The scalar equation of radiative transfer 54
3.2.2 Formalism for a plane parallel atmosphere 56
3.2.3 The vector equation of transfer 58
3.2.4 Expansion into Fourier series of azimuth 59
3.3 Boundary conditions 63
3.4 Solution of the radiative transfer problem 70
3.4.1 Successive orders of scattering (OS) 70
3.4.2 Discrete ordinates (DISORT) 71
3.4.3 Adding–Doubling method 72
3.4.4 Monte Carlo method 73
3.4.5 Approximate methods 73
3.5 Radiative transfer codes 74
3.6 Examples of aerosol impact 75
3.6.1 Ground-based observations 77
3.6.2 Spaceborne measurements 82
3.7 Summary 86

4 Direct observation of the sun for aerosol retrieval 87
Colette Brogniez, Jacqueline Lenoble, and Glenn Shaw
4.1 Introduction 87
4.2 Ground-based sunphotometry 88
4.3 Occultation methods 94
4.4 Conclusion 99

5 Determination of aerosol optical properties from inverse methods 101
Michael D. King, and Oleg Dubovik
5.1 Introduction 101
5.2. Diffuse and direct solar radiation 102
5.2.1 Spectral aerosol optical thickness 102
5.2.2 Sky radiance as a function of scattering angle 106
5.3 Basic inversion of linear systems 112
5.3.1 Direct inversion 112
5.3.2 Least-squares solution 113
5.3.3 Uniqueness and the nature of *a priori* constraints 115
5.3.4 Measures of smoothness 116
5.3.5 Constrained linear inversion 118

5.3.6 Selection of the Lagrange multiplier 120
5.3.7 Solution covariance matrix 122
5.4 Inversion of aerosol size distribution from spectral optical thickness measurements 123
5.5 Combination of observations and multi-term LSM solution 125
5.6 Non-negativity constraints 129
5.7 Smoothness constraints in the case of retrieval of characteristics with nonuniformly spaced ordinates 131
5.8 Inversion of aerosol size distribution and single scattering albedo from spectral optical thickness and sky radiance measurements 134

6 Passive shortwave remote sensing from the ground 137
Glenn E. Shaw, Brent N. Holben, and Lorraine A. Remer
6.1 Introduction 137
6.2 Early history 138
6.3 The Smithsonian program 139
6.4 Early turbidity measurements 140
6.5 Technological advances 141
6.6 BAPMoN, the satellite era and prototypes for the modern networks 142
6.7 AERONET and other modern networks 144
6.8 Aerosol inversions 152
6.9 Examples of science from ground-based remote sensing 153
6.10 Summary 157

7 History of passive remote sensing of aerosol from space 159
Omar Torres, and Lorraine A. Remer
7.1 First observations from space 159
7.2 Measuring stratospheric aerosols using solar occultation measurements .. 160
7.3 El Chichon and Pinatubo volcanic eruptions 161
7.4 Total column aerosol retrieval from reflected visible and near IR observations 163
7.4.1 Retrieval of aerosols over the oceans using the dark target approach .. 165
7.4.2 Retrieval of aerosols over land using the dark target approach 169
7.4.3 Retrieval of aerosols over land using the adjacency effect 171
7.5 Aerosol remote sensing using near UV observations 173
7.5.1 The UV Aerosol Index 173
7.5.2 Aerosol Index properties 175
7.5.3 Benchmark aerosol events 176
7.5.4 Application to other sensors 178
7.5.5 Quantitative use of near-UV observations 179
7.6 Multiangle, polarizationn and geosynchronous capabilities 179
7.6.1 Multiangle 179
7.6.2 Polarization 181
7.6.3 Retrievals from geosynchronous satellites 182
7.7 Summary 182

8 Recent instruments and algorithms for passive shortwave remote sensing ... 185
Lorraine A. Remer, Colette Brogniez, Brian Cairns, N. Christina Hsu, Ralph Kahn, Piet Stammes, Didier Tanré, and Omar Torres
8.1 Introduction ... 185
8.2. SAGE(s)-POAM(s): Occultation instruments ... 188
8.2.1 Mission and instrument description ... 188
8.2.2 Algorithm description ... 189
8.2.3 Size distribution retrieval and derived products ... 192
8.3 MODIS/AQUA/TERRA ... 192
8.3.1 Mission and instrument description ... 192
8.3.2 Algorithm description ... 193
8.3.3 Data use considerations ... 196
8.4 MISR/TERRA ... 196
8.4.1 Mission and instrument description ... 196
8.4.2 Algorithm description ... 197
8.5 POLDER/PARASOL ... 200
8.5.1 Mission and instrument description ... 200
8.5.2 Algorithm description ... 200
8.5.3 Advanced POLDER retrieval ... 203
8.6 OMI-Aura ... 204
8.6.1 Mission and instrument descriptions ... 204
8.6.2 Algorithm description ... 204
8.7 GOME-SCIAMACHY ... 208
8.7.1 Instrument description ... 208
8.7.2 Algorithm description and limitations ... 209
8.8 APS ... 210
8.8.1 Instrument description ... 210
8.8.2 Aerosol retrieval algorithm description and limitations ... 212
8.9 Advances in remote sensing of aerosol using modern sensors ... 214
8.9.1 Aerosol retrieval over clouds ... 214
8.9.2 The MAIAC retrieval ... 217
8.9.3 Single scattering albedo using critical reflectance methods ... 218
8.9.4 Aerosol plume heights ... 219
8.9.5 Advances using combination of sensors or sensors and models ... 220
8.10 Summary ... 221

9 Longwave passive remote sensing ... 223
Clémence Pierangelo, with contributions from Alain Chédin, and Michel Legrand
9.1 Introduction ... 223
9.2 Aerosol optical properties in the longwave domain ... 225
9.2.1 On the relative impact of aerosol species in the infrared ... 225
9.2.2 Effect of refractive indices (or composition) ... 227
9.2.3 Effect of size distribution ... 231
9.2.4 Effect of particle shape ... 234
9.2.5 Summary ... 237

9.3 The radiative transfer equation in the thermal infrared range 237
9.3.1 The RTE in an aerosol-free atmosphere 240
9.3.2 The data required as input for a gaseous atmosphere 246
9.3.3 The particular case of RTE in an atmosphere containing non-scattering aerosol 247
9.3.4 The RTE with scattering processes 249
9.3.5 Solving the RTE 250
9.3.6 Aerosol effect on the longwave spectrum 251
9.4 Inversion principles 255
9.4.1 Useful spectral domain 256
9.4.2 Preliminary steps 258
9.4.3 Detecting aerosols 260
9.4.4 Direct retrieval 264
9.4.5 Physical retrieval 264
9.4.6 Look-up table retrieval 265
9.4.7 Specificities of a retrieval algorithm over land 266
9.4.8 Validating and comparing the results 268
9.5 Illustrations 271
9.5.1 Space observations 271
9.5.2 Ground-based observations 276
9.6 Prospects 280
Appendix: Conversion between wavenumber and wavelength 281

10 Active lidar remote sensing 283
M. Patrick McCormick, and Kevin R. Leavor
10.1 Introduction 283
10.2 Aerosols and elastic backscatter 287
10.3 DIAL 290
10.4 Raman 292
10.5 HSRL 299
10.6 Depolarization 302
10.7 Lidar networks 303
10.8 Spacebased lidar 306
10.9 Summary 312

11 Conclusion: Results and suggestions for future research 315
Jacqueline Lenoble, Lorraine A. Remer and Didier Tanré
11.1 Summary 315
11.2 Results 322
11.3 Algorithms vs. Products; Validation vs. intercomparison 323
11.4 Recommendations for future work 325

Combined bibliography 327
