

Modern Batteries

An introduction to
electrochemical power sources

Colin A. Vincent with *Franco Bonino*,
Mario Lazzari and Bruno Scrosati

A

Contents

1	Introduction	1
1.1	Electrochemical power sources	1
1.2	Nomenclature	2
1.3	The renaissance in battery development	3
1.4	A survey of common battery types and applications	4
1.5	Conclusions	14
2	Theoretical background <i>by Colin A. Vincent</i>	16
2.1	Introduction	16
2.2	The electrical double layer and the formation of electric potentials at interfaces	18
2.3	Thermodynamics of galvanic cells	21
2.4	Current flow in an electrochemical cell	33
2.5	Battery characteristics and performance criteria	51
3	Primary aqueous electrolyte cells <i>by Mario Lazzari</i>	59
3.1	Introduction	59
3.2	Leclanché cells	59
3.3	Zinc chloride cells	75
3.4	Alkaline manganese cells	76
3.5	Aluminium and magnesium-based Leclanché cells	81
3.6	Zinc–mercuric oxide, zinc–silver oxide and related systems	83
3.7	Metal–air batteries	89
3.8	Magnesium reserve batteries	93
4	Secondary aqueous electrolyte cells <i>by Franco Bonino and Colin A. Vincent</i>	95
4.1	Introduction	95
4.2	The lead–acid cell	95
4.3	Cadmium–nickel oxide cells	112
4.4	Iron–nickel oxide cells	125
4.5	Zinc–nickel oxide cells	127
4.6	Zinc–silver oxide and related cells	129
4.7	Redox cells	134

5	Ambient lithium-liquid electrolyte cells	<i>by Mario Lazzari and Colin A. Vincent</i>	136
5.1	Introduction		136
5.2	Electrolytes		137
5.3	The lithium anode in primary cells		142
5.4	Cathode materials and lithium primary cells		145
5.5	Secondary systems		162
6	High temperature cells	<i>by Bruno Scrosati and Colin A. Vincent</i>	168
6.1	Introduction		168
6.2	Negative electrodes		169
6.3	Electrolytes		173
6.4	High temperature lithium batteries		178
6.5	High temperature sodium batteries		186
6.6	Thermal batteries		200
7	Solid state cells	<i>by Bruno Scrosati</i>	204
7.1	Introduction		204
7.2	Silver-iodine batteries		209
7.3	Lithium-halogen batteries		212
7.4	Lithium-lead iodide, lead-sulphide batteries		218
7.5	Lithium alloy - titanium disulphide and related batteries		219
7.6	Hydrogen concentration cells		222
7.7	Lead-cupric fluoride thin layer batteries		223
7.8	Lithium polymer electrolyte batteries		224
8	Secondary hybrid cells	<i>by Franco Bonino and Mario Lazzari</i>	227
8.1	Introduction		227
8.2	Metal-air cells		227
8.3	Metal-halogen cells		231
8.4	Hydrogen-metal cells		237
	Appendices		
1	Operational modes and charging techniques for secondary batteries		240
2	Electrical quantities, physical constants and conversion factors		243
	Bibliography		245
	Glossary		249
