

Improvement of Chromium Yield of Stainless Steelmaking in an EAF by Using Off-Gas Analysing System

Von der Fakultät für Georessourcen und Materialtechnik
der Rheinisch-Westfälischen Technischen Hochschule Aachen

zur Erlangung des akademischen Grades eines

Doktor der Ingenieurwissenschaften

genehmigte Dissertation

vorgelegt von **M.Sc.**

Victor Yuardi Risonarta

aus Mojokerto / Indonesien

Berichter: Univ.-Prof. Dr.-Ing. Herbert Pfeifer

 PD Dr.rer.nat Marcus Kirschen

Tag der mündlichen Prüfung: 07. Mai 2010

Table of Contents

Table of Contents	vii
Nomenclature.....	x
1 Introduction.....	1
1.1 Problem Definition	1
1.2 State of Research.....	5
1.3 Research Objectives	10
2 Thermodynamic Fundamentals of Element Oxidation	12
2.1 Thermodynamics Laws	12
2.1.1 Zeroth Law of Thermodynamics.....	12
2.1.2 First Law of Thermodynamics	12
2.1.3 Second Law of Thermodynamics	12
2.1.4 Third Law of Thermodynamics	13
2.2 Gibbs Energy	13
2.2.1 Standard Gibbs Energy	13
2.2.2 Excess Gibbs Energy.....	16
2.2.2.1 Associate Model	17
2.2.2.2 Quasi-Chemical Model	19
2.2.3 Gibbs Energy of a Multicomponent Solution	20
2.3 Oxidation and Reduction of Element in Metallurgical Slag	21
2.3.1 Silicon Oxidation	23
2.3.2 Carbon Oxidation	24
2.3.3 Chromium Oxidation	25
2.3.4 Iron Oxidation.....	27
3 Thermodynamic Simulation of Element Oxidation	28
3.1 Determination of Equilibrium Composition during Oxygen Injection.....	28
3.2 Influence of Steel and Slag Compositions on the Intensive Silicon and Carbon Oxidation	31
3.3 Competitive Carbon and Chromium Oxidation	36
3.4 Restriction of the Thermodynamic Simulation	41
3.4.1 Inhomogeneous Element and Temperature Distributions in Liquid Steel.....	42
3.4.2 Rate Determining Step.....	44
3.4.2.1 Mass Transfer.....	45

3.4.2.2 Chemical Reaction	47
4 Off-Gas Analysing System.....	49
4.1 Measurement of the Off-Gas Composition	53
4.1.1 Infrared CO and CO ₂ Measurements	53
4.1.2 Paramagnetic O ₂ Measurement	54
4.2 Temperature Measurement	56
4.3 Flow Measurement	57
5 Control of Element Oxidation by Using the Off-Gas Analysing System.....	59
5.1 Result of Off-Gas and Slag Analyses	59
5.1.1 Results of Off-Gas Analysis at Point A and Point B	60
5.1.2 Mass Balance	63
5.1.2.1 Carbon Mass Balance	63
5.1.2.2 Slag Analysis	65
5.2 Strategy to Control the Element Oxidation	68
5.2.1 Early Stage of Oxygen Injection	71
5.2.2 Middle Stage of Oxygen Injection	72
5.2.3 End Stage of Oxygen Injection	75
5.3 Slag Reduction by Ferro-Silicon	80
6 Plant Trials	86
6.1 Slag Analysis in the EAF	86
6.2 Controlling of the Oxygen Injection	87
6.3 Increase of Chromium and Iron Yields	90
7 Energy Input of EAF	97
7.1 Influence of Slag Reductants on EAF Energy Balance	97
7.1.1 Enthalpy of Slag Reduction by Ferro-Silicon	97
7.1.2 Enthalpy of Slag Reduction by Carbon	100
7.2 Chemical and Electrical Energy Inputs	103
7.3 EAF Energy Loss	106
7.3.1 Energy Loss through Off-Gas	106
7.3.2 Energy Loss through Slag	109
7.3.3 Energy Loss through Dust	110
7.4 EAF Energy Efficiency	111
8 Empirical Modelling.....	115
8.1 Modelling Objective	115

8.2	Modelling Method	118
8.3	Results of Empirical Modelling	120
9	Discussion	132
9.1	Optimisation of the Hot Injection Zone	132
9.1.1	Optimisation of Ferro-Silicon Addition	132
9.1.2	Optimisation of Oxygen Lance Operation	134
9.2	Influences of Oxygen Injection and Slag Strategy on Dephosphorization	135
9.3	Energy and Resource Efficient in the EAF	138
9.3.1	Maintaining the Initial Temperature of the Refining Period.....	138
9.3.2	Use of Lime instead of Limestone	139
10	Summary	142
11	References	146
