	1.6.3.1

SYSTEMS ANALYSIS AND DESIGN USING NETWORK TECHNIQUES

GARY E. WHITEHOUSE

*Department of Industrial Engineering
Lehigh University*

PRENTICE-HALL, INC., *Englewood Cliffs, New Jersey*

CONTENTS

PREFACE	xi
---------	----

1	Introduction—Systems Modeling and Analysis Using Network Techniques	2
1.1	System Modeling	3
1.2	Types of Models to be Studied	4
1.3	Advantages and Disadvantages of Network Modeling Techniques	8
	References	9
2	Fundamentals of Probability Theory	10
2.1	Events and Probability	11
2.2	Random Variables	17
2.3	Transforms	23
2.4	The Markovian Property	27
	Exercises	28
	References	29
		vii

3	Activity Networks: PERT and CPM	30
3.1	Arrow Diagrams	31
3.2	PERT: Program Evaluation and Review Technique	41
3.3	CPM: Critical Path Method	51
3.4	Project Control	63
	Exercises	64
	References	70
4	Project Management—Implementation of Activity Network Studies	72
4.1	Application of Project Management Techniques	73
4.2	Case Problem—Launching a New Product	74
4.3	Use of the Computer in Project Network Analysis	88
4.4	Other Project Management Techniques	90
	Exercises	98
	References	104
5	Maximal—Flow and Shortest-Path Analysis	106
5.1	Shortest-Path Analysis	107
5.2	Maximal Flow Methods	122
5.3	The Relationship between Linear Programming and Maximal Flow	139
5.4	Extensions and New Areas of Study	156
	Exercises	156
	References	160
6	Flowgraphs	162
6.1	Definition of Flowgraph Analysis	163
6.2	Methods of Solution of Flowgraphs	168
6.3	Path Inversion	181
6.4	Additional Topics to be Considered in Flowgraph Analysis	184
6.5	Applications of Flowgraphs for System Modeling	185
	Exercises	191
	References	195
7	Decision Trees	198
7.1	Decision Tree Analysis	199
7.2	Experimental Alternatives	202
7.3	Uncertain Payoffs and Measurements	215
7.4	Stochastic Decision Trees	220
7.5	Decision Making for Those Not Interested in Maximizing NPV	228
7.6	Applications of Decision Trees	235
	Exercises	237
	References	240
8	GERT: An Analytic Approach to the Solution of Stochastic Networks	242
8.1	Elements of the GERT Network	244
8.2	Evaluation of EXCLUSIVE-OR GERT Networks	249

8.3 Counters and Conditional Moment Generating Functions for GERT Networks	275
8.4 The Analytic Approach to the AND and INCLUSIVE-OR Node	286
8.5 Other Topic Areas	294
Exercises	296
References	300
9 GERTS III: A Simulation Approach to the Analysis of Stochastic Networks	302
9.1 GERTS III Network Characteristics	304
9.2 Program Operating Procedure	308
9.3 Input to GERT III and Limitations	309
9.4 Examples of the Use of GERTS	314
9.5 GERTS IIIQ	331
9.6 GERTS IIIC and GERTS IIIR	339
Exercises	340
References	341
10 Discipline-Oriented Applications of GERT	342
10.1 Queueing Analysis	343
10.2 Analysis of Inventory Systems	360
10.3 Analysis of Reliability Systems	378
10.4 Modeling Quality Control Sampling Plans Using GERT	391
10.5 Project Management of R and D Projects	403
10.6 GERT an Aid to Management	419
Exercises	427
References	430
11 Case Studies of GERT Applications	434
11.1 Case Study—An Analysis of a Manufacturing Process Using the GERT Approach	435
11.2 Case Study—The Analysis of T-Type Traffic Intersection Using GERT	450
11.3 Case Study—A Model of Student Progress at Virginia Polytechnical Institute	469
11.4 Case Study—The Development of Optimum Stopping Rules for Sampling Plans	483
References	487
Appendix	490
Flowgraph Computer Program	491
Index	495
