Probabilistic Analysis of Redundant Systems

Fachbereich Mathematik
Technische Hochschule Darmstadt
Bibliothek

Inv.-Nr. B 18 174

Springer-Verlag
Berlin Heidelberg New York 1980

CONTENTS

1	<u>REDUNDANT SYSTEMS</u>	1-12
1.1	Introduction	1
1.2	Repairable Systems	2
1.3	2-Unit Standby Redundant Systems	3
1.4	Parallel Redundant System	5
1.5	Multiple Unit Systems	5
1.6	Gnedenko Systems	7
1.7	Systems with Imperfect Switchover	7
1.8	Priority Redundant Systems	8
1.9	Intermittently Used Systems	9
1.10	Optimization Problems in Reliability	10
1.11	Scope of the Present Work	10
2	<u>RENEWAL THEORY AND POINT PROCESSES</u>	13-49
2.1	Introduction	13
2.2	Renewal Process	16
2.3	Stationary Point Processes	25
2.4	Special Point Processes	37
2.4a	Stationary Renewal Processes	37
2.4b	Alternating Renewal Processes	38
2.4c	Markov Renewal Processes	41
2.5	Regenerative Processes	45
2.6	Multivariate Point Processes	48
3	<u>COLD STANDBY SYSTEMS</u>	50-80
3.1	Introduction	50
3.2	Reliability Analysis	52
3.3	Availability Analysis	54
3.4	Multivariate Point Processes of the Events E_i	60
3.5	Steady State Characteristics	62
3.6	Visits to Different States and Sojourn times	69
3.7	Special Cases	72
3.7a	Lifetime Exponentially Distributed	72
3.7b	Repair Time Exponentially Distributed	76
3.8	Cold Standby System of Dissimilar Units	77
4	<u>WARM STANDBY SYSTEM</u>	81-107
4.1	Introduction	81
4.2	Reliability and Availability Analysis	82
4.3	Characterization of E_1 events	88
4.4	Steady State Characteristics	90
4.5	Dissimilar Units	92
4.6	Special Cases	98
4.7	Numerical Results	104

5	<u>WARM STANDBY SYSTEMS WITH AN IMPERFECT SWITCHOVER</u>	108-155
5.1	Introduction	108
5.2	Problem Description and Notation	109
5.3	Reliability Analysis	111
5.4	Availability Analysis	113
5.5	A System of Dissimilar Units	124
5.5a	Reliability Analysis	127
5.5b	Availability Analysis	131
5.6	System with Identical Units	135
5.6a	Reliability Analysis	137
5.6b	Availability Analysis	138
5.7	Numerical Results	140
6	<u>WARM STANDBY SYSTEMS WITH AN IMPERFECT SWITCHOVER AND A SINGLE REPAIR FACILITY</u>	156-185
6.1	Introduction	156
6.2	General Analysis	156
6.3	Reliability Analysis	158
6.4	Availability Analysis	163
6.5	The Effect of Preemptive Priorities in Service on Reliability Measures	165
6.6	System with Dissimilar Units	169
6.7	Numerical Results	172
7	<u>INTERMITTENTLY USED COLD STANDBY SYSTEMS</u>	186-218
7.1	Introduction	186
7.2	Formulation of the Problem	187
7.3	One Unit System with a Repair Facility	189
7.4	Two Unit System with Single Repair Facility	192
7.5	Numerical Results	201
7.5a	One Unit System	201
7.5b	Two Unit System	207
8	<u>INTERMITTENTLY USED TWO UNIT SYSTEMS: WARM STANDBY REDUNDANCY</u>	219-259
8.1	Introduction	219
8.2	Formulation of the Problem	219
8.2a	P.d.f. of the Time to the First D-event	225
8.2b	Mean Number of D-events	227
8.2c	Mean Square Number of D-events	229
8.2d	Duration of Disappointment	231
8.3	A System of Dissimilar Units: Standby under Perpetual Vigil	232
8.3a	P.d.f. of the Time to the First D-event	236
8.3b	Mean Number of D-events	238
8.3c	Mean Square Number of D-events	241
8.3d	Expected Duration of Disappointments	243
8.3e	Special Cases	244

8.4	Warm Standby Redundancy in which Failures are Detected only During Need Periods	246
8.4a	Behaviour of the Sub-system in Standby	248
8.4b	Stochastic Process of a-events	251
8.4c	Stochastic Process of D-events	253
8.4d	Duration of Disappointment	256
8.4e	Special Cases	258
9	<u>PRIORITY STANDBY REDUNDANT SYSTEMS</u>	260-288
9.1	Priority Systems	260
9.2	The Model	260
9.3	Analysis of the Model	262
9.4	Preemptive Repair	263
9.4a	Reliability Analysis	263
9.4b	Availability Analysis	266
9.5	Nonpreemptive Repair	272
9.5a	Reliability Analysis	272
9.5b	Availability Analysis	272
9.6	Cold Standby System	275
9.6a	Preemptive Repair	275
9.6b	Nonpreemptive Repair	276
9.7	Optimization Model	277
9.8	Numerical Results	278
10	<u>MULTICOMPONENT SYSTEMS</u>	289-341
10.1	Introduction	289
10.2	Model 1: Single Repair Facility	290
10.2a	System Description	290
10.2b	The Birth and Death Process Associated with the Spares	291
10.2c	Time to System Failure (TSF)	294
10.2d	Availability Analysis	296
10.3	Model 2: r-repair Facilities	297
10.3a	System Description	297
10.3b	The Birth and Death Process Associated with the Spares	298
10.3c	Time to System Failure	300
10.3d	Availability Analysis	300
10.4	Explicit Solution for the case $m=2$ and $r=1$	301
10.5	Explicit Solution for the Case $m=5$ and $r=3$	307
10.6	Numerical Results	313
10.7	Optimization Problems	313
10.8	n-unit System with Arbitrary Repair Rate	328
10.8a	Reliability Analysis	329
10.8b	Availability Analysis	331
10.8c	The 3-unit System	332
10.9	Gnedenko Systems	334
10.9a	Reliability Analysis	335
10.9b	Availability Analysis	336
10.9c	A More General Model	338
	References	342
