introduction to

PSYCHOLOGY

SIXTH EDITION

HARCOURT BRACE JOVANOVIICH, INC.

New York Chicago San Francisco Atlanta

contents

part one

psychology as a scientific and humanistic endeavor

1

the nature of psychology

3

Psychological conceptions of man 5

The broad province of contemporary psychology 12

Methods of psychology 16

Measurement in psychology 20

The family of behavior sciences 24

Organization of the book 25

part two

biological and developmental processes

2

biological basis of psychology

31

Basic units of the nervous system 32

Organization of the nervous system 36

Hierarchical structure of the brain 40

Cerebral cortex 44

A divided brain 49

Autonomic nervous system 55

Endocrine system 57

Genetic influences on behavior 58

3

developmental psychology

67

Factors governing development 68

Stages in development 74

Personality development in early childhood 81

The process of identification 87

Role of the adolescent 91

Search for identity 95

Development as a lifelong process 98

part three	perception and awareness	
4	sensory processes	103
	Some general characteristics of the senses	104
	The visual sense	107
	The auditory sense	119
	Other senses	124
5	perception	129
	Object perception and perceptual constancies	130
	Organization and perception	133
	Movement perception	138
	Depth perception	140
	Visual coding and pattern recognition	141
	The role of learning in perception	145
	Attention and perception	148
	Extrasensory perception	151
6	states of consciousness	158
	Varieties of waking states	160
	Sleeping and dreaming	165
	Hypnosis as an altered state of awareness	173
	Meditation and self-induced alterations of consciousness	177
	Psychoactive drugs and their effects	180
part four	learning and thinking	
7	conditioning and learning	193
	Classical conditioning	195
	Operant conditioning	199
	The principle of reinforcement	208
	Multiple-response learning	210
	Cognitive learning	214
8	memory and forgetting	221
	Kinds of remembering	222
	Retrieval processes	227
	The nature of forgetting	230

Are memories permanent? 234
 Two-process theories of memory 236
 Improving memory 240

9 optimizing learning 247

Programmed learning and automated instruction 248
 Transfer of learning 253
 Imagery as an aid to learning 257
 Reward and punishment in the control of learning 260
 Anxiety and learning 264

10 language and thought 269

Symbols and concepts 270
 Structure of language 275
 Development of language 280
 Language and forms of thought 287
 Information-processing models of thinking 292

part five motivation and emotion

11 physiological basis of motivation 301

Development of motivational concepts 302
 Hunger 306
 Obesity 312
 Thirst 314
 Sex 320
 Other drives with physiological basis 325
 Basic motives with unspecified physiological correlates 328
 Current status of motivational concepts 330

12 human motivation and emotion 332

Theories of motivation 334
 Motivational factors in aggression 337
 Emotion 344
 Emotional expression 355
 Emotions as adaptive and disruptive 357

part six	personality and individuality	
13	personality and its assessment	363
	The shaping of personality 364	
	The trait approach 367	
	The psychoanalytic approach 374	
	The social learning approach 382	
	The humanistic approach 389	
	Overview of personality theories 394	
14	ability testing and intelligence	399
	Testing aptitudes and achievements 400	
	Tests of general intelligence 403	
	Nature of human intelligence 407	
	Age changes in intelligence 414	
	Genetic basis of intelligence 416	
	Extremes of intelligence 420	
	Present status of ability tests 423	
part seven	conflict, adjustment, and mental health	
15	conflict, anxiety, and defense	429
	Frustration 430	
	Reactions to frustration 434	
	Anxiety 440	
	Defense mechanisms 442	
	Defense mechanisms and adjustment 448	
16	psychopathology	452
	Abnormal behavior 453	
	Neuroses 457	
	Psychoses 468	
	Research on the causes of schizophrenia 477	
	Psychophysiological disorders 482	
	Personality disorders 485	
	Prevalence of mental disorders 489	

17	psychotherapy and other treatment methods	493
	Historical background 494	
	Techniques of psychotherapy 497	
	Evaluation of psychotherapies 514	
	Somatotherapy 516	
	Enhancing mental health 518	
part eight	social behavior	
18	social psychology	525
	by Daryl J. Bem, Stanford University	
	Perception of others 527	
	Attribution processes 537	
	Social influence 544	
	Compliance and attitude change 551	
19	psychology and society	562
	by Daryl J. Bem, Stanford University	
	Behavioral science and public policy 563	
	The methodological contributions of behavioral science 565	
	Societal ideology and behavioral science 577	
	appendix: statistical methods and measurement	585
	glossary	599
	reference and index to authors of works cited	619
	index	641
