Preface v
Notation xi
Foreword xv

Chapter 1 Introduction

1.1 Composite Beams and Slabs 1
1.2 Composite Columns and Frames 5
1.3 Design Philosophy 6
1.4 Properties of Materials and Shear Connectors 9
1.5 Loading 11
1.6 Methods of Analysis and Design 13

Chapter 2. Shear Connection

2.1 Introduction 18
2.2 Simply Supported Beam of Rectangular Cross-section 19
2.2.1 No shear connection
2.2.2 Full interaction
2.3 Uplift 24
2.4 Methods of Shear Connection 25
2.4.1 Bond
2.4.2 Shear connectors
2.4.3 Corrugated metal decking

2.5 Tests on Shear Connectors 29
2.6 Partial Interaction 33
2.7 Effect of Slip on Stresses and Deflections 36

Chapter 3. Simply Supported Composite Beams and Slabs

3.1 Design Methods 40
3.2 The Design Example 41
3.3 The Floor Slab 42
3.3.1 Example. The floor slab
3.4 Flexural Strength of Composite Beams 45
3.4.1 Moment of resistance
3.4.2 Example. Flexural strength of composite beam
3.5 Number and Spacing of Shear Connectors 49
3.5.1 Example. Number and spacing of shear connectors
3.6 Transverse Reinforcement in the Slab 54
3.6.1 Design method
3.6.2 Longitudinal shear in haunched beams
3.6.3 Limits to the applicability of the design method
3.6.4 Detailing of transverse reinforcement
3.6.5 Comparison with other design methods
3.6.6 Lightweight-aggregate concrete
3.6.7 Example. Transverse reinforcement in the slab
3.6.8 Use of precast concrete slabs
3.7 Stresses and Deflections in Service 66
3.7.1 Formulae for full-interaction elastic analysis of cross-sections
3.7.2 Example. Stresses in service
3.7.3 Limiting deflections, and the use of span–depth ratios
3.7.4 Example. Deflection in service
3.8 Effects of Shrinkage of Concrete and of Temperature 76
3.9 Partial-interaction Design 76
3.9.1 Example. Partial-interaction design
3.10 Form-reinforced Composite Slabs 80
3.10.1 Properties of cold-formed steel decking
3.10.2 Design of form-reinforced slab
3.10.3 Example
3.11 Composite Beams Supporting Form-reinforced Slabs 90
3.11.1 Slab with ribs parallel to the steel beam
3.11.2 Slab with ribs at right angles to the steel beam
3.11.3 Example

3.12 Vibration of Long-span Composite Floors 96
3.12.1 Example. Vibrational behaviour of the floor structure

Chapter 4. Continuous Composite Beams

4.1 Design Methods for Beams in Buildings 101
4.2 The Design Example 103
4.3 Negative-moment Regions of Continuous Composite Beams 104
4.3.1 Negative moment of resistance
4.3.2 Use of simple plastic theory for composite beams
4.3.3 Example. Negative moment of resistance
4.3.4 Vertical shear
4.3.5 Example. Vertical shear
4.3.6 Longitudinal shear
4.3.7 Example. Shear connection and transverse reinforcement
4.4 The Applicability of Simple Plastic Theory 115
4.4.1 Moment redistribution in a fixed-ended beam
4.4.2 Local buckling in negative-moment regions
4.4.3 Strain hardening and its effects
4.4.4 Rotation capacity of positive-moment regions
4.4.5 Example. Applicability of plastic theory
4.5 Elastic Analysis for Stresses and Deflections in Service 122
4.5.1 Properties of cross-sections subjected to negative moments
4.5.2 Example. Elastic properties of the cross-section
4.5.3 Longitudinal bending moments and stresses
4.5.4 Example. Stresses due to serviceability loads
4.5.5 Deflections of continuous beams
4.5.6 Example. Deflections
4.6 Crack-width Control in Continuous Beams 134
4.6.1 Example. Crack-width control
4.6.2 Crack-width control in positive-moment regions
4.6.3 Example. Crack-width control at midspan
4.7 Slender Beams at the Ultimate Limit State 143

Chapter 5. Composite Columns and Frames

5.1 Introduction 145
5.2 Cased-strut Design to BS 449: Part 2 146
5.2.1 Example. Design by the cased-strut method

5.3 Ultimate-strength Design Method of Basu and Sommerville 151
5.3.1 Properties of the cross-section, and the interaction curve
5.3.2 Biaxial bending
5.3.3 Long-term loading
5.3.4 Simplification of the Basu and Sommerville method
5.3.5 Eccentricity of loading in 'Simple' design
5.3.6 Example. Design by Ultimate-strength methods
5.3.7 Comparison between column design methods
5.4 Concrete-filled Steel Tubes 171
5.4.1 Strength of filled tubes
5.4.2 Example. Use of filled tube for external column
5.5 Beam–column Joints and the Design of Composite Frames 177
5.5.1 Example. Fixing moments in 'simple' joints
5.6 Design of Rigid-jointed Composite Frames 182
5.6.1 Braced frames
5.6.2 Beam–column interaction
5.6.3 Critical buckling and effective length
5.6.4 Interim design method
5.6.5 Example. Design of rigid-jointed braced frame

Appendix A. Partial-interaction Theory

A.1 Theory for Simply Supported Beam 190
A.2 Example. Partial Interaction 194

Appendix B. The Effect of Local Buckling on the Collapse Load of a Fixed-ended Beam 196
