

THERMOCHEMICAL KINETICS

*Methods for the Estimation of Thermochemical Data
and Rate Parameters* *Second Edition*

SIDNEY W. BENSON

Professor of Chemistry
Chemistry Department
University of Southern California
Los Angeles, California

Bibliothek FB7
Physikal. Chemie / Chem. Technologie
Technische Hochschule
Darmstadt

A Wiley-Interscience Publication

JOHN WILEY & SONS, New York · London · Sydney · Toronto

Inventar Nr. 10429 / PC 2

CONTENTS

Note on Units

I Thermodynamic Equilibria and Rates of Reaction	1
1. Thermodynamics and Kinetics	1
2. Ideal Gas-phase Reactions	2
3. Detailing Balancing	3
4. Thermochemical Quantities	6
5. Standard States	8
6. Arrhenius Parameters	10
7. Modified Arrhenius Equation	12
8. Free Energy of Activation	13
9. Negative Activation Energies	15
10. Reaction-coordinate-energy Diagram	16
II Methods for the Estimation of Thermochemical Data	19
1. Some Thermodynamic Relations	19
2. The Compensation Effect	21
3. Sources of Data	23
4. Additivity Rules for Molecular Properties	24
5. Additivity of Bond Properties	24
6. Additivity of Group Properties	26
7. The <i>gauche</i> Interactions	28
8. Nongroup Interactions, Rings	31
9. Estimation of Thermochemical Data at Higher Temperatures	32
10. Some Statistical Mechanical Results	35
11. Structural Methods of Estimating C_p°	38
12. Vibrational Contributions to C_p°	42
13. Electronic Contributions to C_p°	46
14. Symmetry Numbers and Isomers	47
15. Estimations of C_{pT}° from Model Compounds	50
16. Free Radicals	53

17.	Vibrational Contributions to Entropy	56
18.	Strain Energy and Resonance Energy	60
19.	Pi-bond Energies	63
20.	Entropies of Ring Compounds	65
21.	Polycyclic Ring Estimates from Open Chains	68
22.	Groups for Radicals	72
III	Arrhenius Parameters for Gas-Phase: Unimolecular Reactions	78
1.	Elementary Processes in Gas Reactions	78
2.	Transition-state Theory of Rate of Rate Processes	79
3.	Unimolecular Reactions—Categories	84
4.	Simple Fission of Atoms from Molecules	85
5.	Potential Energy of Simple Bonds	86
6.	A Factors for Simple Fission	90
7.	Simple Fission into Two Larger Groups	96
8.	Temperature Coefficient of Rate Parameters	100
9.	<i>cis-trans</i> Isomerizations	104
10.	Complex Fissions—Cyclic Transition States	108
11.	Unimolecular Reactions—Biradical Intermediates	117
12.	Polycyclic Compounds	128
13.	Steric Inhibition of Resonance in Transition States	132
14.	Arrhenius A Factors for Ring Pyrolyses	135
15.	Reverse Diels-Alder Reactions	136
IV	Arrhenius Parameters for Bimolecular and Termolecular Reactions	141
1.	Collision Theory of Bimolecular Reactions	141
2.	Structural Analysis of Steric Factors	143
3.	Bimolecular Reactions—Categories	146
4.	Loose and Tight Transition States	147
5.	Lower Limits to Bimolecular A Factors	148
6.	Metathesis Reactions—Atoms	151
7.	Metathesis Reactions of Radicals	156
8.	Association Reactions—Recombination	160
9.	Association Reactions—Addition	167
10.	Displacement Reactions	169
11.	Energy-transfer Processes—Diagnosis	171
12.	Atom Recombination	177
13.	Energy-transfer Processes—Low-pressure Limit	181
14.	Reactions of Ions	184
15.	Activation Energy of Chemical Reactions—Bimolecular Reactions	190

16.	Activation Energies of Molecule—Molecule Reactions	195
17.	Dynamical Effects in Chemical Reactions	197
18.	Energy Transfer in Collisions	201
19.	Reaction Dynamics—Conservation Rules	204
20.	Isotope Effects	207
V	Analysis of Complex Reaction Systems	209
1.	Chain Reactions	209
2.	Some Criteria for Significance of Chains	210
3.	Rates of Chain Cycles	212
4.	Products of Competing Chains	214
5.	Some Simple Chain Categories	217
6.	Initiation Steps	221
7.	Termination Reactions	225
8.	Transfer Reactions and Sensitization	227
9.	Steady-state Hypothesis	228
10.	Pyrolysis of CH_3CHO	230
11.	“Wrong” Radicals	232
12.	Selectivity of Radicals	236
13.	Oxidation	237
14.	Inert Initiation Radicals	243
15.	Secondary Reactions	244
16.	Gas-phase Polymerization	248
17.	Homogeneous Catalysis	250
18.	Homogeneous Catalytic Recombination	255
19.	Isomerization Steps in Chains	257
20.	Hot-molecule Reaction—Chemical Activation	262
21.	Reactions of Ozone with Olefins	266
	Appendix	271
Table A.1	Group Values for ΔH_f° , S_{int}° , and C_{pT}° Hydrocarbons	272
A.2	Oxygen-containing Compounds	274
A.3	Group Contributions to C_{pT}° , S° , and ΔH_f° at 25°C and 1 atm for Nitrogen-containing Compounds	278
A.4	Halogen-containing Compounds. Group Contribution to ΔH_f° , S° , and C_{pT}° , Ideal Gas at 1. atm.	280
A.5	Sulfur-containing Compounds. Group Contributions to ΔH_f° , S° , and C_{pT}°	281
A.6	Organometallic Compounds	284
A.7	Values of C_p° for the Common Elements in their Standard States at Different Temperatures.	288
A.8	Thermochemical Data for Some Gas-phase Atomic Species	288

x Contents

A.9	Thermochemical Data for Some Gas-phase Triatomic Species	292
A.10	Thermochemical Data for Some Gas-phase Tetratomic Species	293
A.11	Thermochemical Data for Some Polyatomic Species	294
A.12	Thermochemical Data for Some Gas-phase Organic Free Radicals	299
A.13	Frequencies Assigned to Normal and Partial Bond Bending and Stretching Motions	300
A.14	Some Average Covalent Radii, Bond Lengths	302
A.15	Contributions of Harmonic Oscillator to C_p as a Function of Frequency and Temperature	303
A.16	Molar Heat Capacity C_p° as a Function of Barrier (V), Temperature, and Partition Function Q_f	303
A.17	Absolute Entropy of a Harmonic Oscillator as a Function of Frequency and Temperature	304
A.18	Approximate Moments of Inertia, Entropies, and Partition Functions Q_f at 300°K of Some Free Rotors	305
A.19	Some Characteristic Torsion Barriers, V (kcal/mole) to Free Rotation about Single Bonds	306
A.20	Decrease in Entropy of Free Rotor as Functions of Barrier Height (V), Temperature (T , °K) and Partition Function, Q_f	307
A.21	Torsion Frequencies for Methyl-substituted Ethylenes	308
A.22	Bond-dissociation Energies for Some Organic Molecules $R'-R''$	309
A.23	Table of Ionic and Atomic Polarizabilities	310
