

Heft 113

On the Management and Salinity Control of Drip Irrigation

von

Dr.-Ing. Amin Iqbal

~~Technische Hochschule Darmstadt
Institut für Wasserbau und Wasserwirtschaft
Fachgebiet Wasserbau
HP 24 JAN 2003
Inv. Nr. P 18102~~

Eigenverlag des Instituts für Wasserbau an der Universität Stuttgart

Table of Contents

Vorwort	I
Acknowledgements.....	VIII
Abstract.....	IX
List of illustrations.....	XVI
List of tables.....	XX
List of symbols and abbreviations.....	XXI
1 Introduction.....	1
1.1 Drip irrigation.....	1
1.2 Statement of the problem.....	2
1.3 Scope of the study.....	6
1.4 Objectives.....	8
2 Management of Drip Irrigation.....	9
2.1 Research approach for drip irrigation management.....	9
2.2 Review of literature.....	9
2.3 Theoretical background.....	12
2.3.1 Soil water movement under drip irrigation system.....	12
2.3.2 Geometry of the wetted soil volume under drip irrigation.....	16
2.3.3 Wetting patterns of an emitter for different types of soil.....	17
2.3.4 Wetting patterns of an emitter at different discharge rates.....	18
2.3.5 Available water to the plants from the soil.....	20
2.3.6 Soil moisture extraction by the plant roots.....	21
2.3.7 Plant root system development.....	21
2.3.8 Methods for monitoring soil water status in the plant root zone	22
2.3.8.1 Plant monitoring for soil water status.....	22
2.3.8.2 Climatic monitoring of evapotranspiration.....	23
2.3.8.3 Soil based sensors for monitoring soil water status	23
2.3.9 Crop water requirements (evapotranspiration).....	24
2.3.9.1 Reference crop evapotranspiration	24
2.3.9.2 Crop coefficient	25

2.3.10	Effective rainfall.....	26
2.3.11	Factors influencing effective rainfall.....	26
2.3.11.1	Land characteristics.....	26
2.3.11.2	Soil characteristics.....	27
2.3.11.3	Soil water characteristics.....	27
2.3.11.4	Groundwater characteristics.....	27
2.3.11.5	Management practice.....	28
2.3.11.6	Crop characteristics.....	28
2.3.12	Measurement of effective rainfall.....	28
2.3.12.1	Surface run-off.....	29
2.3.12.2	Rooting depth.....	30
2.3.12.3	Deep percolation losses.....	30
2.3.12.4	Interception.....	30
2.3.13	Drip irrigation scheduling.....	30
2.4	Results and discussions.....	32
2.4.1	Development of computer models for surface drip irrigation management and scheduling.....	32
2.4.1.1	Computer models input requirements.....	33
2.4.1.2	Computer models outputs.....	34
2.4.1.3	Computer models testing and verification.....	40
2.4.2	Development of nomograms and tables for the selection of Depth-width-discharge and depth-discharge-volume combinations for the wetted soil volume under surface drip irrigation for the soils used for agricultural purposes and having hydraulic conductivities in the range of 10^{-4} – 10^{-7} m/s	43
2.4.2.1	Commentary on depth-width-discharge nomograms.....	44
2.4.2.2	Commentary on depth-discharge-volume nomograms.....	49
3	Control and Management of Salinity under Drip Irrigation	54
3.1	Research approach for control and management of salinity under drip irrigation	54

3.2	Review of literature	54
3.3	Theoretical background	58
3.3.1	Salt movement in soil with irrigation water.....	58
3.3.1.1	Downward salt movement.....	58
3.3.1.2	Upward salt movement.....	59
3.3.1.3	Gypsum precipitation.....	59
3.3.1.4	Total salt mass balance.....	59
3.3.2	Salt accumulation under surface drip irrigation	60
3.3.3	Soil and plant interaction with salinity.....	61
3.3.3.1	Seed germination and salinity.....	61
3.3.3.2	Salinity, leaf expansion and photosynthesis.....	61
3.3.4	The crop salinity production function.....	61
3.3.5	Irrigation water quality analysis.....	64
3.4	Results and discussions.....	65
3.4.1	Engineering techniques for salinity control and management under drip irrigation.....	65
3.4.1.1	Leaching requirement.....	65
3.4.1.2	Timing of irrigation.....	65
3.4.1.3	Frequency of irrigation.....	67
3.4.1.4	Emitter placement in relation to plant and salinity control.....	68
3.4.1.5	Pre-plant irrigation.....	68
3.4.1.6	Changing water supply.....	69
3.4.2	Development of computer models for salinity control and management with irrigation scheduling.....	69
3.4.2.1	Computer models input requirements.....	69
3.4.2.2	Computer models outputs.....	71
3.4.2.3	Computer models testing and verification.....	77
4	Computer Program for Surface Drip Irrigation Management and Salinity Control	81
4.1	Development of a computer program for surface drip irrigation management and salinity control	81

4.2	Research approach to develop computer program for surface drip irrigation management and salinity control DISSCP	81
4.3	Description to DISSCP.....	81
4.3.1	Introduction of DISSCP.....	81
4.3.2	Execution of DISSCP.....	82
4.3.3	Launching DISSCP.....	82
4.3.4	Create a new scheduling.....	83
4.3.5	Selection of computer model on the basis of plant type.....	83
4.3.6	Selection of computer model on the basis of salinity conditions.....	84
4.3.7	Creating a new irrigation scheduling file.....	84
4.3.8	Constant inputs.....	84
4.3.9	Daily inputs.....	88
4.3.10	Outputs.....	90
4.3.11	Database.....	90
4.3.12	Designed wetting pattern shape.....	91
4.3.13	Adjusting wetting pattern shape.....	91
4.3.14	Enter new data or view existing one.....	93
5	Photovoltaic Pumping System for Drip Irrigation.....	94
5.1	Research approach to develop the procedure for the selection, operation and best match of photovoltaic pumping system for the designed drip irrigation system	94
5.2	Review of literature.....	94
5.3	Theoretical background.....	96
5.3.1	Photovoltaic (PV) modules.....	96
5.3.1.1	Crystalline silicon PV modules.....	96
5.3.1.2	Amorphous silicon (A-Si) PV modules.....	96
5.3.1.3	Thin film PV technology.....	96
5.3.2	Array sizing	97
5.3.3	Orientation of array	99
5.3.4	Power conditioning.....	99
5.3.4.1	Voltage regulation.....	99

	5.3.4.2	Tracking mechanism.....	100
	5.3.4.3	Inverters.....	100
	5.3.4.4	Batteries.....	101
	5.3.4.5	Switches and cut-outs.....	101
5.3.5		PV pumping configurations.....	101
	5.3.5.1	Submerged motor / pump.....	103
	5.3.5.2	Surface motor / submerged pump	103
	5.3.5.3	Floating motor pump sets.....	103
	5.3.5.4	Surface suction pumpset.....	103
5.3.6		Pump technology.....	103
5.3.7		Pump performance.....	105
5.3.8		Motor technology.....	106
5.4		Results and discussions.....	107
	5.4.1	Investigation and estimation of water source and its consumption.....	107
	5.4.2	Pumped quantity of water per day and the total head required.....	107
	5.4.3	Selection of solar pumping system according to situation	107
	5.4.4	Irradiation values.....	107
	5.4.5	Selection of the optimum tilt angle.....	108
	5.4.6	Selection of array size.....	109
	5.4.7	The use of system performance curves for the selection of solar pumping system.....	110
	5.4.7.1	Examples.....	111
	5.4.8	Instantaneous output.....	112
	5.4.8.1	Example.....	113
6		Socio-Economic Aspects and Impacts of Drip Irrigation Management	114
6.1		Research approach to investigate socio-economic aspects and impacts of drip irrigation management.....	114
6.2		Socio-economic aspects and impacts.....	114
	6.2.1	Economic aspects.....	115
	6.2.1.1	Subsistence economics.....	115

6.2.1.2	Competitive economics.....	117
6.2.1.3	Economic evaluation of photovoltaic pumping system for drip irrigation.....	121
6.2.2	National objectives.....	123
6.2.3	Health aspects.....	124
6.2.4	Settlement problems.....	124
6.2.5	Increase density of population and employment.....	125
7	Summary.....	126
8	Zusammenfassung.....	129
9	References.....	144
10	Appendices.....	153
