Contents

1 Introduction 1

- 1-1. History, 1
- 1-2. Asymmetric Synthesis, 4
- 1-3. Illustrative Examples of Asymmetric Synthesis, 6
- 1-4. Methods of Producing Optically Active Compounds, 14
 - 1-4.1. *Physical Separations via Enantiomeric Crystalline Forms*, 15
 - 1-4.2. *Resolutions Based Upon Separations of Diastereomeric Forms*, 16
 - 1-4.3. *Thermodynamically Controlled Asymmetric Transformations of Stereochemically Labile Diastereomers*, 17
 - 1-4.4. *Kinetically Controlled Asymmetric Transformations*, 28

2 Reactions of Achiral Reagents with Chiral Keto Esters 50

- 2-1. Introduction, 50
- 2-2. Prelog's Generalization, 55
- 2-3. Quantitative Aspects of α -Keto Ester Asymmetric Syntheses, 64

- 2-3.1. *Effect of the Chiral Alcohol Moiety on Asymmetric Synthesis with α -Keto Esters*, 64
- 2-3.2. *Effect of Variations in the α -Keto Acid Moiety upon the Extent of Asymmetric Synthesis*, 66
- 2-3.3. *The Effect upon Stereoselectivity Resulting from Changes in the Addition Reagent*, 68
- 2-3.4. *The Asymmetric Reduction of Chiral Esters of α -Keto Acids*, 72
- 2-3.5. *Determination of Configuration by the Atrolactic Asymmetric Synthesis*, 73
- 2-3.6. *Miscellaneous Asymmetric Synthesis with Chiral Esters of α -Keto Acids*, 78
- 2-3.7. *Asymmetric Synthesis with Chiral Benzoylformamides*, 78
- 2-4. *Asymmetric Synthesis Studies with β -, γ -, δ - and Higher Keto Esters*, 80

3 Reactions of Achiral Reagents with Chiral Aldehydes and Ketones 84

- 3-1. *Introduction*, 84
- 3-2. *Models for Stereochemical Control of Asymmetric Additions to Chiral Aldehydes and Ketones*, 87
 - 3-2.1. *The Open-Chain Model*, 90
 - 3-2.2. *The Cyclic Model*, 94
 - 3-2.3. *The Dipolar Model*, 98
 - 3-2.4. *Examples Containing α -Oxygen Substituent*, 100
 - 3-2.5. *Examples Containing α -Nitrogen Substitution*, 103
 - 3-2.6. *Examples of 1,3-Asymmetric Induction*, 108
- 3-3. *The Transition State for Addition Reactions to Chiral Ketones*, 113
- 3-4. *Steric Control of Asymmetric Induction in Cyclic Ketones*, 116
 - 3-4.1. *Cyclopentanones*, 117
 - 3-4.2. *Cyclohexanones*, 121
 - 3-4.3. *Polycyclic Systems*, 127
 - 3-4.4. *Bicyclic Ketones*, 129

4 Various Asymmetric Addition Reactions of Carbonyl Compounds 133

- 4-1. *The Cyanohydrin Reaction*, 133
- 4-2. *Aldol-Type Addition Reactions*, 142
- 4-3. *The Reformatsky Reaction*, 145
- 4-4. *The Darzens Reaction*, 152
- 4-5. *Intramolecular Oxidation-Reduction*, 154

5 Hydrogen Transfer from Chiral Reducing Agents to Achiral Substrates 160

- 5-1. Meerwein-Ponndorf-Verley Reductions, 160
 - 5-1.1. *Introduction*, 160
 - 5-1.2. *Stereochemical Model for the Transition State*, 163
 - 5-1.3. *Reductions with Chiral Aluminum Alkoxides*, 164
 - 5-1.4. *Reductions with Chiral Magnesium Alkoxides*, 165
 - 5-1.5. *MPV-Type Reduction Using a Chiral Alkoxyaluminum-dichloride*, 172
 - 5-1.6. *MPV-Type Asymmetric Reductions Using Chiral Alkali Metal Alkoxides*, 172
 - 5-1.7. *Use of the Asymmetric MPV Reduction to Determine the Configuration of Biphenyl Derivatives*, 175
- 5-2. Asymmetric Grignard Reduction Reaction, 177
 - 5-2.1. *Introduction and Mechanism*, 177
 - 5-2.2. *Experimental Considerations*, 180
 - 5-2.3. *The Effect of Various Substrates and Chiral Reducing Agents in Asymmetric Grignard Reductions*, 182
- 5-3. Reduction by Chiral Metal Hydride Complexes, 202
 - 5-3.1. *Asymmetric Reduction of Ketones*, 204
 - 5-3.2. *Asymmetric Reduction of Enamines and Imines*, 210
 - 5-3.3. *LAH-Monosaccharide Complexes in Asymmetric Reductions*, 213
 - 5-3.4. *Asymmetric Reductions of Carbonyl and Imino Compounds by Di-3-pinanylborane*, 215

6 Asymmetric Additions to Alkenes 219

- 6-1. *Introduction*, 219
- 6-2. Hydroborations with "Di-3-pinanylborane", 220
 - 6-2.1. *Asymmetric Synthesis of Alcohols via Hydroboration-Oxidation of Olefins*, 222
 - 6-2.2. *Kinetic Resolution of Racemic Olefins*, 230
 - 6-2.3. *Synthesis of Optically Active Ketones*, 231
 - 6-2.4. *Other Asymmetric Syntheses via Hydroboration with "Di-3-pinanylborane"*, 233
 - 6-2.5. *Transition State Models for Hydroboration with "Di-3-pinanylborane"*, 234
 - 6-2.6. *Asymmetric Hydroboration Under the Control of Chiral Centers in the Olefin*, 239
- 6-3. Asymmetric Cycloaddition Reactions, 241
 - 6-3.1. *The Synthesis of Chiral Cyclopropanes via Cyclo Addition Reactions*, 241
 - 6-3.2. *Diels-Alder Reactions*, 252

- 6-3.3. *Asymmetric Epoxidation*, 258
- 6-4. *Asymmetric Cyclization Reactions*, 262
- 6-5. *Asymmetric Oxymercuration and Alkoxymercuration*, 266
- 6-6. *Miscellaneous Asymmetric Additions to Carbon–Carbon Double Bonds*, 272
 - 6-6.1. *Conjugate Additions to Chiral α,β -Unsaturated Esters*, 276
 - 6-6.2. *Uncatalyzed Additions of Chiral Alcohols and Amines to Ketenes*, 282
 - 6-6.3. *Reduction of Enyols to Optically Active Allenes with Chiral Lithium Aluminum Hydride Complexes*, 282
 - 6-6.4. *Hydroxylation of Chiral α,β -Unsaturated Esters*, 282
 - 6-6.5. *Addition of Ammonia and Amines*, 283
 - 6-6.6. *Asymmetric Additions of Bromine*, 284
 - 6-6.7. *Attempted Prévost-Type Asymmetric Synthesis with a Chiral Electrophile*, 286
 - 6-6.8. *Asymmetric Electrophilic Addition to an Enamine*, 286
 - 6-6.9. *Asymmetric Addition of Olefins to Dienophiles*, 287
- 6-7. *Asymmetric Catalytic Hydrogenation*, 288
 - 6-7.1. *Introduction*, 288
 - 6-7.2. *Asymmetric Homogeneous Hydrogenation with Chiral Rhodium Complexes*, 288
 - 6-7.3. *Asymmetric Heterogeneous Hydrogenation*, 292

7 Asymmetric Synthesis of Amino Acids and Amino Acid Derivatives 297

- 7-1. *Hydrogenation of Carbon–Carbon Double Bonds*, 297
 - 7-1.1. *Achiral Substrates and Chiral Catalysts*, 297
 - 7-1.2. *Chiral Substrates*, 299
- 7-2. *Reduction of Carbon–Nitrogen Double Bonds*, 302
 - 7-2.1. *Achiral Substrates and Chiral Catalysts*, 303
 - 7-2.2. *Achiral Substrates and Chiral Reagents*, 303
- 7-3. *Nucleophilic Additions to Carbon–Carbon Double Bonds*, 321
 - 7-3.1. *Addition of Chiral Amines to the Carbon–Carbon Double Bond of a Chiral Substrate*, 321
 - 7-3.2. *Addition of Achiral Nucleophiles to the Carbon–Carbon Double Bond of a Chiral Substrate*, 324
 - 7-3.3. *Addition of Chiral Amine to the Carbon–Carbon Double Bond of a Chiral Substrate*, 324
 - 7-3.4. *Addition of Achiral Nucleophiles to the Carbon–Carbon Double Bond of an Achiral Substrate Under the Influence of a Chiral Catalyst*, 325

- 7-4. Miscellaneous Asymmetric Amino Acid Syntheses, 327
 - 7-4.1. *Asymmetric Strecker Amino Acid Synthesis*, 327
 - 7-4.2. *Asymmetric Oxazolone Peptide Synthesis*, 327
 - 7-4.3. *Chiral Metal Complex Catalyzed Asymmetric Condensations*, 333

8 Asymmetric Synthesis at Hetero Atoms 335

- 8-1. Asymmetric Synthesis at Sulfur, 335
 - 8-1.1. *Introduction*, 335
 - 8-1.2. *Asymmetric Oxidation of Achiral Sulfur Compounds with Chiral Reagents*, 336
 - 8-1.3. *Asymmetric Oxidation of Chiral Sulfides with Achiral Reagents*, 351
 - 8-1.4. *Synthesis of Chiral Sulfinates and Sulfinamides*, 362
- 8-2. Asymmetric Synthesis at Nitrogen, 365
- 8-3. Asymmetric Synthesis at Silicon, 369
- 8-4. Asymmetric Synthesis at Phosphorus, 371

9 Asymmetric Rearrangements and Elimination Reactions 374

- 9-1. Intramolecular Transfer of Centrodissymmetry, 374
 - 9-1.1. *Transfer of Centrodissymmetry from Carbon to Carbon*, 375
 - 9-1.2. *Transfer of Centrodissymmetry from Carbon to Sulfur*, 379
 - 9-1.3. *Transfer of Centrodissymmetry from Nitrogen to Carbon*, 380
 - 9-1.4. *Asymmetric Hydrogen Transfers*, 381
- 9-2. The Interconversion of Centrodissymmetry and Molecular Dissymmetry, 384
 - 9-2.1. *Optically Active Biphenyls*, 384
 - 9-2.2. *Chiral Allenes*, 386
 - 9-2.3. *Spiranes, Alkylidenecycloalkanes, and Related Cases*, 397
- 9-3. Asymmetric Eliminations, 403

10 Miscellaneous Topics in Asymmetric Synthesis 411

- 10-1. Asymmetric Reactions in Chiral Media, 411
 - 10-1.1. *Electrophilic Substitution in Chiral Media*, 414
 - 10-1.2. *Carbonyl Additions in Chiral Media*, 415
 - 10-1.3. *Asymmetric Reductions in Chiral Media*, 417

- 10.2. Asymmetric Synthesis by Substitution at a Prochiral Ligand, 419
- 10-3. Asymmetric Polymer Synthesis, 425
- 10-4. Absolute Asymmetric Reactions, 426
 - 10-4.1. *Absolute Kinetic Resolutions*, 427
 - 10-4.2. *Absolute Asymmetric Synthesis*, 430
