

# **RADARGRAMMETRIC IMAGE PROCESSING**

**Franz W. Leberl**

**Artech House**

# *Contents*

Preface	xv
Chapter 1 Introduction	1
1.1 What is Radargrammetry?	1
1.2 A Historical Review	2
1.3 Status of Radargrammetry	11
1.4 Accuracy of Radargrammetric Information	16
1.5 Topics in Radargrammetry	17
Part I Radargrammetric Sensors and Image Model	23
Chapter 2 Creating a Side-Looking Radar Image	25
2.1 Introduction	25
2.2 Principle of Real Aperture or Brute Force Radar	27
2.3 Ground Resolution	32
2.4 Radar Echo	36
2.5 A First Look at the Interpretation of an SLR Image	37
2.6 A Geometric View of Synthetic Aperture Side-Looking Radar	38
2.6.1 The First Step: Generation of the Signal Film	40
2.6.2 The Second Step: Transformation of the Signal into a Map Image—SAR Image Correlation	43
2.6.3 Synthetic Antenna and Resolution	46
2.7 Other Viewpoints of SAR	50
2.8 Digital SAR Phase History Processing	51
2.9 Real-Time SAR Imaging	54
2.10 Radargrammetrically Relevant Differences Between Real- and Synthetic Aperture Radar	54
2.11 SLR in a Satellite	55
2.12 Squint Mode Imaging	57
2.13 The Concept of Multiple Radar Looks and Speckle	60

	2.14 Diffuse and Specular Reflection	64
	2.15 Imaging of Moving Objects	67
	2.16 Radar Backscatter	71
Chapter 3	Basics of Radargrammetry	77
	3.1 Basic Geometric Concepts	77
	3.1.1 Definitions	78
	3.1.2 Viewing Geometry	81
	3.1.3 Image of a Distance	81
	3.1.4 Image of a Vertical Structure—Relief Displacement	84
	3.1.5 Image of a Vertical Structure—Lay Over	86
	3.1.6 Image of a Vertical Structure—Shadows	87
	3.1.7 Image of a Slope	88
	3.1.8 Squint	90
	3.1.9 Tissot Analysis of the SLR Imaging Geometry	92
	3.2 Illustrations of the Radar Viewing Geometry	94
	3.3 Relationship Between Resolution and Scale	97
	3.4 Defining Sensor Events Time $t$ and Slant Range $r$ for Each Image Point	100
	3.5 Projection Equation	103
	3.6 The Squint Angle $\tau$	108
	3.7 Real Aperture Radar with Squint and Inclined Imaging Planes	109
	3.8 The Concept of Inner Orientation	110
	3.9 Discussion	111
Chapter 4	Modeling of Single Image Geometric Problems	113
	4.1 Introduction	113
	4.2 Computation of Ground Coordinates from Given Image Coordinates with Known Interior and Exterior Orientation	113
	4.2.1 The Object is an Ellipsoid	114
	4.2.2 The Object is a Sphere	114
	4.2.3 The Object is a Horizontal Plane	119
	4.2.4 Horizontal Flight and Object Plane	119
	4.3 Computation of Ground Coordinates from Given Image Coordinates When the Exterior Orientation is Not Known	119
	4.3.1 Interpolative Methods	120
	4.3.2 Parametric Models Using the Differential Form of the Radar Equation	122
	4.3.3 Hybrid Methods	127
	4.4 Computation of Image Coordinates for Given Ground Points and with Known Exterior Orientation	127
	4.5 Accuracy Studies	130
	4.5.1 Theoretical Prediction	130

	6.3.2	A Modification of the Object Space Algorithm (Method II)	174
	6.3.3	Image Space Algorithm	176
	6.3.4	Ground Range Mapping	177
	6.4	Radar Noise	177
	6.5	Phase History Simulation	180
	6.6	A Review of Some Radar Simulation Systems	183
	6.6.1	Coherent System Simulation	183
	6.6.2	Noncoherent Image Simulator	185
	6.7	Radargrammetric Applications	186
Chapter	7	Sources of Radar Images	189
	7.1	Historical Imaging Radar Coverage	189
	7.2	Historical Extraterrestrial Satellite Projects	190
	7.3	Historical Terrestrial Satellite Projects	193
	7.4	Current Aircraft Radar Mapping Systems	196
	7.5	Future Satellite SAR Missions	199
	7.6	Outlook	199
Part II		A Radargrammetric Tool Kit	203
Chapter	8	Radar Image Rectification	205
	8.1	Introduction and Definitions	205
	8.2	Ortho-Image Generation	206
	8.3	Rectifying SLR Images Using an External DEM	209
	8.4	The Creation of Secondary Radar Image Products	214
	8.5	Image Mosaicking	217
	8.6	Semiconrolled Mosaics	218
	8.7	Radiometric Rectification	218
	8.7.1	The Concept	218
	8.7.2	An Example	219
	8.7.3	Comments	227
	8.8	Radar Image Monoplotting	227
	8.9	Graphical Rectification	228
	8.10	Accuracy of Rectification	230
Chapter	9	Radar Image Matching	235
	9.1	Justification	235
	9.1.1	High Data Rates from Satellites	235
	9.1.2	Multiparameter Data Sets	236
	9.1.3	Difficulties in SAR Matching	236
	9.2	Some Classes of Matching Procedures	237
	9.3	From Registration to Matching	238
	9.4	Problems of Registering Dissimilar Radar Imagery	239
	9.4.1	Dissimilarities among Overlapping SLR Images	239

---

9.4.2	The Density of Correspondence Points	240
9.4.3	Geocoding of Individual SLR Images	240
9.4.4	Opposite-Side Image Pairs	240
9.4.5	Other Sources of Dissimilarities	242
9.5	Correlation-Based Search for Match Points	243
9.5.1	Area Correlation Methods	244
9.5.2	Elementary Correlation	244
9.5.3	Sequential or Hierarchical Variations	247
9.5.4	Finding the Maximum Correlation Coefficient	247
9.5.5	Edge-Based Methods	248
9.6	Analysis of Radiometric Effects on Correlation	249
9.7	An Alternative Edge Based Algorithm:	
The Marr-Hildreth Based Binary Overlap Method		250
9.7.1	Marr-Hildreth Threshold Images	251
9.7.2	Matching of Marr-Hildreth Threshold Images	254
9.7.3	The Binary Overlap Method and Its Computational Complexity	254
9.8	Discussion of Results Obtained with the New Matching Method	259
9.9	Outlook	263
Chapter 10	Automated Matching of a Radar Image and Map Database	267
10.1	The Problem	267
10.2	Features for Matching	269
10.2.1	Terrain-Induced Shadows	269
10.2.2	Terrain-Induced Shading	270
10.3	Issues for the Selection of Control Information from Databases	270
10.4	Overview of a System of Rules for SLR Image Control	272
10.5	Image Processing to Extract Features	275
10.5.1	Extraction of Shadows from Imagery	278
10.5.2	Vectorizing Shadow Boundaries	281
10.6	Feature Matching	282
10.6.1	Region Based Matching	282
10.6.2	Boundary Based Matching	282
10.7	Using Shadows to Define Correspondence Points	284
10.7.1	Defining Correspondence Points	284
10.7.2	Correspondence Points and Imaging Configuration	285
10.8	Using Feature Data to Define Correspondence Points	287
10.9	Correspondence Points to Define the Sensor Position and Rectify the Image	288
10.9.1	Determining the Flying Height and Cross-Track Coordinates	288

---

10.9.2	An Alternative Method Using a Differential Offset in Flying Height and Cross Track	291
10.10	Results and Discussion	293
10.11	Analysis of Robustness	298
Chapter 11	Merging Radar and Nonradar Imagery	301
11.1	Introduction	301
11.2	The Creation of Registered Multisensor Data Sets	302
11.2.1	General	302
11.2.2	Manual Methods of Matching Multisensor Images	303
11.2.3	Automated Matching by Image Correlation	304
11.2.4	Automated Matching Based on Objects	305
11.2.5	Further Study	305
11.3	Example of a Multisensor Data Set	306
11.3.1	Description of Experimental Data Sets	306
11.3.2	Registration Methodology	306
11.3.3	Observations	311
11.4	Conclusions and Recommendations	313
Chapter 12	Radar Stereoscopy	317
12.1	General	317
12.2	Radar Stereoscopic Exaggeration	319
12.3	Radar Stereo Arrangements	322
12.4	Radar Stereo Viewability with Parallel Flight Lines	325
12.5	The Visual Appearance of Stereo Radar Models	332
12.6	Stereo-Viewability Assessment by Image Simulation	334
12.7	Crossing Flight Lines	336
12.7.1	Definition	336
12.7.2	Vertical Exaggeration	338
12.7.3	Simulation Study of Stereo Viewability of Images from Crossing Flight Lines	339
12.7.4	Simulation Study of Stereo Viewability with Squinted Mode Imaging	339
12.8	Viewing of Opposite-Side Stereo Radar Pairs	340
12.8.1	The Problem	340
12.8.2	Digital Preprocessing to Make Opposite-Side SLR Stereo Pairs Viewable	342
12.8.3	Conclusion	344
12.9	Outlook	345
Chapter 13	Radar Stereo Mapping	349
13.1	Introduction	349
13.1.1	The General or Rigorous Definition of a Radar Stereo Intersection	349

13.2	Solution of the Rigorous Radar Stereo Intersection Problem	351
13.2.1	Algorithm	351
13.2.2	Comments	353
13.3	Definition of Parallaxes	354
13.4	Parallax Differences Based on Projection Circles	355
13.5	Approximate Parallax Differences	359
13.6	Error Propagation—Definition of a Method	360
13.7	Coordinate Errors	362
13.8	Errors of Coordinate Differences	368
13.8.1	Stereo Base: $dB$	368
13.8.2	Flight Altitude: $dH$	369
13.8.3	Range Errors: $dr'$ , $dr''$ , $\sigma'_r$ , $\sigma''_r$	372
13.9	Discussion of the Error Analysis	374
13.10	Relative Orientation—Formation of a Radar Stereo Model	376
13.11	Generation of Terrain Contour Lines	377
13.12	The Impossibility of Single Flight Stereo SAR Using Nonzero Doppler Processing	378
13.13	Real-Time Consideration for Radar Stereo Plotting	381
13.14	Stereo Mapping with Radar Images Obtained from Crossing Flight Lines	383
13.14.1	Rigorous Intersection Geometry	383
13.14.2	Parallax Geometry	383
13.15	Use of Overlapping Radar Images for Slope Mapping	389
13.16	A Review of Stereo Radar Accuracies	391
13.16.1	Methods	391
13.16.2	Accuracies Achieved Prior to SIR-B	392
13.16.3	Mapping Lunar Features from Apollo-17 Imaging Radar	393
13.16.4	Accuracies from SIR-B	398
13.16.5	Other Results	400
13.16.6	Accuracy and DEM	401
13.16.7	Radar Stereo Accuracy from Crossing Flight Lines	401
13.16.8	Conclusions	404
Chapter 14	Automated Parallax Detection	409
14.1	Introduction	409
14.2	Difficulties for SAR Stereo Scenarios	409
14.3	Approach to Automated Stereo Parallax Measurements	414
14.3.1	Preprocessing	414
14.3.2	Window Matching	415
14.3.3	Matching with a Restricted Search Space	420
14.3.4	Processing Height Models	420

14.4	Recommendations and Outlook	421
14.4.1	Coping with Radiometric Dissimilarities	421
14.4.2	Using More than Two Images	421
14.4.3	Semiautomated Instead of Automated Parallax Detection	421
14.4.4	Integrated Slope Reconstruction Tool Kit	422
Chapter 15	Radarclinometry—Shape from Shading	425
15.1	Slope from Image Gray Values and Stereo Techniques	425
15.2	A Review of Radar Shape-from-Shading Technology	426
15.2.1	Reflectance	426
15.2.2	Single <i>versus</i> Multiple Images	428
15.2.3	Constraints to Obtain a Solution	429
15.2.4	Radarclinometry—Wildey's Approach	430
15.2.5	Radar Shape-from-Shading—Frankot's Approach	431
15.3	Analysis of Frankot's Single Image Algorithm	431
15.4	Generalized $N$ -Image Algorithm	435
15.4.1	Overview	437
15.4.2	Mathematical Formulation of Approach 1: Generalizing the Cost Function	437
15.4.3	Mathematical Formulation of Approach 2: Combining Independent Surface Reconstructions	438
15.5	Inclusion of <i>A Priori</i> Spot Elevations	440
15.6	An Algorithm to Estimate the So-Called Terrain Basis Functions	442
15.7	Experimental Verification	446
15.8	Outlook	451
Chapter 16	Blocks of Radar Images	455
16.1	Introduction	455
16.2	Methods	456
16.3	Results and Accuracies	461
16.4	Discussion	466
Chapter 17	SAR Interferometry	469
17.1	Principles of Operation	469
17.2	Discussion of the Basic SAR Interferometry Principle with Two Antennas	472
17.3	Single-Antenna Satellite SAR Interferometry	473
17.3.1	Complex Voltage	474
17.3.2	The Method of Obtaining Null Lines	475
17.3.3	Interferometry-Related Image Registration	476
17.3.4	Phase Unwrapping	477
17.4	Computation of Height	480
17.5	Accuracies	481

Part III Applications	485
Chapter 18 Earth Based Planetary Radar Imaging	487
18.1 Introduction	487
18.2 Image Formation	488
18.2.1 Range and Doppler Discrimination	488
18.2.2 Resolving the North-South Ambiguity	489
18.2.3 The Creation of an Altitude Map	492
18.2.4 Discussion	492
18.3 Radar Images of Planet Venus	493
18.4 Altimetry	494
18.5 Conclusion	497
Chapter 19 Tracking of Arctic Ice Floes in SAR Images	499
19.1 Background	499
19.2 Automated Tracking of Sea Ice	505
19.3 Extracting Features from SAR Images of Sea Ice	507
19.4 Representing Sea Ice Features with $\psi$ -s Curves	508
19.5 Matching of $\psi$ -s Curves Using Correlation	513
19.6 Verification of Correct Matches	515
19.7 Problems with Matching $\psi$ -s Curves Using Correlation	516
19.8 Dynamic Programming	517
19.8.1 A Dynamic Programming Solution to the Matching of $\psi$ -s Curves	517
19.8.2 Problems with the Dynamic Time Warping Approach	522
19.9 Outlook	523
Chapter 20 Radar Image Mapping at Scale 1:50,000	527
20.1 Introduction	527
20.2 Applicability of SLR Imagery to Small- and Medium- Scale Mapping	528
20.2.1 New Mapping Tools Needed	528
20.2.2 Current Medium- and Small-Scale Mapping	528
20.2.3 Cost	532
20.2.4 Relating Conventional Standards to Side-Looking Radar	533
20.3 An Operational SLR System for Mapping	534
20.4 Viewing Geometry Considerations	534
20.5 Data Acquisition and Preprocessing	535
20.6 Data Analysis	537
20.6.1 Procedure	537
20.6.2 Discussion	539

---

20.7	Results	540
20.7.1	Map Products	540
20.7.2	Accuracy	541
20.8	GPS Based SAR Operation	546
20.9	GPS Based DEMs	548
20.10	Thematic Content of SLR Imagery for Mapping	550
20.11	Conclusions	552
Chapter 21	Outlook	555
21.1	Current Status	555
21.2	Progress with SAR Data	556
21.3	Radargrammetric Progress	556
21.4	Radar for Cartography	557
21.5	Sensor-Independent Iconometry	557
Appendix	Introductory Exercises for Radargrammetric Analysis	559
	Bibliography	579
	Index	591
