MATHEMATICAL APPARATUS

Chapter I Basic Concepts and Theorems of Group Theory

Part 1. Properties of Group Operations

1.1. Group Postulates	3
1.2. Examples of Groups	4
1.3. Isomorphism and Homomorphism	6
1.4. Subgroups and Cosets	7
1.5. Conjugate Elements, Classes	8
1.6. Invariant Subgroups, Factor Groups	9
1.7. Direct Products of Groups	10
1.8. The Semidirect Product	10

Part 2. Representations of Groups

1.9. Definition	11
1.10. Vector Spaces	12
1.11. Reducibility of Representations	15
1.12. Properties of Irreducible Representations	16
1.13. Characters	17
1.14. The Calculation of the Characters of Irreducible Representations	18
1.15. The Decomposition of a Reducible Representation	20
1.16. The Direct Product of Representations	21
1.17. Clebsch–Gordan Coefficients	24
1.18. The Regular Representation	25
1.19. The Construction of Basis Functions for Irreducible Representations	26

Chapter II The Permutation Group**Part 1. General Considerations**

- | | |
|-----------------------------------------------------|----|
| 2.1. Operations with Permutations | 30 |
| 2.2. Classes | 31 |
| 2.3. Young Diagrams and Irreducible Representations | 32 |

Part 2. The Standard Young–Yamanouchi Orthogonal Representation

- | | |
|-------------------------------------------------------------------------------------------------------------------|----|
| 2.4. Young Tableaux | 34 |
| 2.5. Explicit Determination of the Matrices of the Standard Representation | 36 |
| 2.6. The Conjugate Representation | 39 |
| 2.7. The Construction of an Antisymmetric Function from Basis Functions for Two Conjugate Representations | 40 |
| 2.8. Young Operators | 41 |
| 2.9. The Construction of Basis Functions for a Standard Representation from a Product of N Orthogonal Functions | 43 |

Part 3. The Nonstandard Representation

- | | |
|-------------------------------------------------------|----|
| 2.10. Definition | 46 |
| 2.11. The Transformation Matrix | 48 |
| 2.12. Some Generalizations | 52 |
| 2.13. Young Operators in a Nonstandard Representation | 53 |

Chapter III Groups of Linear Transformations**Part 1. Continuous Groups**

- | | |
|------------------------------------------------------------|----|
| 3.1. Definition. Distinctive Features of Continuous Groups | 57 |
| 3.2. Examples of Linear Groups | 59 |
| 3.3. Infinitesimal Operators | 61 |

Part 2. The Three-Dimensional Rotation Group

- | | |
|------------------------------------------------------------------------------------------|----|
| 3.4. Rotation Operators and Angular Momentum Operators | 63 |
| 3.5. Irreducible Representations | 64 |
| 3.6. Reduction of the Direct Product of Two Irreducible Representations | 67 |
| 3.7. Reduction of the Direct Product of k Irreducible Representations. $3n-j$ Symbols. | 69 |

Part 3. Point Groups

- | | |
|------------------------------------------------|----|
| 3.8. Symmetry Elements and Symmetry Operations | 73 |
| 3.9. Classification of Point Groups | 75 |

Chapter IV Tensor Representations and Tensor Operators**Part 1. The Interconnection between Linear Groups
and Permutation Groups**

- | | |
|------------------------------------------------------------------------------|----|
| 4.1. Construction of a Tensor Representation | 83 |
| 4.2. Reduction of a Tensor Representation into Irreducible
Components | 84 |
| 4.3. Formulae for the Characters of Symmetrized Powers of
Representations | 88 |
| 4.4. Littlewood's Theorem | 91 |
| 4.5. The Reduction of $U_{2j+1} \rightarrow R_3$ | 94 |

Part 2. Irreducible Tensor Operators

- | | |
|-------------------------------------------|-----|
| 4.6. Definition | 97 |
| 4.7. The Wigner–Eckart Theorem | 100 |
| 4.8. Matrix Elements of Spherical Tensors | 101 |

SYMMETRY AND QUANTAL CALCULATIONS**Chapter V Principles of the Application of Group
Theory to Quantum Mechanics**

- | | |
|-----------------------------------------------------------------------------------|-----|
| 5.1. The Symmetry of the Schrödinger Equation and the
Classification of States | 107 |
| 5.2. Conservation Laws | 110 |
| 5.3. Perturbation Theory | 112 |
| 5.4. The Variation Method | 116 |
| 5.5. Selection Rules | 119 |

Chapter VI Classification of States**Part 1. Electrons in a Central Field**

- | | |
|---------------------------------------------------------------|-----|
| 6.1. Equivalent Electrons, L – S Coupling | 124 |
| 6.2. Additional Quantum Numbers. The Seniority Number | 129 |
| 6.3. Equivalent Electrons, j – j Coupling | 131 |
| 6.4. Configurations of Several Groups of Equivalent Electrons | 133 |

**Part 2. The Connection between Molecular Terms
and Nuclear Spin**

- | | |
|-----------------------------------------------------------------------------------------------------------|-----|
| 6.5. The Classification of Molecular Terms and the Total Nuclear Spin | 135 |
| 6.6. The Determination of the Nuclear Statistical Weights of
Coordinate States | 140 |
| 6.7. Statistical Weights of Rotational Levels and Molecular Spin
Modifications | 142 |
| 6.8. Transition from the Rotational Partition Function to an Integral
over States. The Symmetry Number | 148 |

Part 3. Classification of States in Approximate Quantal Calculations

- | | |
|-------------------------------------------------------------------------------------------------------------------------|-----|
| 6.9. The Configuration Interaction Method and Partial Diagonalization of the Secular Equation | 150 |
| 6.10. Determination of the Multiplets Which May Arise in Calculations by the Valence Bond Method | 153 |
| 6.11. Determination of All the Multiplets Which Arise from a Ring of Six's Orbitals with Full Configuration Interaction | 161 |

Chapter VII The Method of Coefficients of Fractional Parentage

Part 1. Equivalent Electrons

- | | |
|------------------------------------------------------------|-----|
| 7.1. Definition of Coefficients of Fractional Parentage | 167 |
| 7.2. Calculation of Matrix Elements of Symmetric Operators | 173 |

Part 2. Configurations of Several Groups of Equivalent Electrons. A State with Arbitrary Permutational Symmetry

- | | |
|-------------------------------------------------------------------------------|-----|
| 7.3. A Single Shell | 177 |
| 7.4. A Configuration of Two Shells | 183 |
| 7.5. An Arbitrary Multishell Configuration | 189 |
| 7.6. Formulae for the Matrix Elements of Symmetric Spin-Independent Operators | 191 |

Part 3. Non-Vector-Coupled States

- | | |
|------------------------------------------------|-----|
| 7.7. Configuration of Singly Occupied Orbitals | 194 |
| 7.8. Arbitrarily Occupied Orbitals | 197 |

Chapter VIII Calculation of Electronic States of Molecular Systems

Part 1. The Hydrogen Molecule. Configuration Interaction

- | | |
|------------------------------------|-----|
| 8.1. The Valence Bond Method | 199 |
| 8.2. The Molecular Orbital Method | 203 |
| 8.3. Orthogonal Localized Orbitals | 205 |

Part 2. Calculation of the Energy Matrix for an Arbitrary Molecular System

- | | |
|----------------------------------------------------------------------|-----|
| 8.4. Matrix Elements of the Operators F and G | 206 |
| 8.5. Expression for the Matrix Elements of the Hamiltonian | 213 |
| 8.6. The Interaction of Two Subsystems in States with Definite Spins | 222 |

Part 3. Symmetric Systems

8.7. Construction of Basis Functions for the Molecular Symmetry Group in the Molecular Orbital Method	228
8.8. Method of Calculation in the Valence Bond Approximation	233
8.9. Calculation of the H ₃ Molecule with Full Interaction of All Configurations of Is Orbitals	242

Part 4. The Self-Consistent Field Method

8.10. The Hartree-Fock Equations	246
8.11. Survey of Methods of Treating Electron Correlation	254
8.12. Self-Consistent Field Equations for Spin-Degenerate States	265
8.13. Configuration of Singly Occupied Nonorthogonal Orbitals	272
8.14. The Self-Consistent Field Equations for the Method of "Different Orbitals for Different Spins"	279

Appendix 1 Character Tables for Point Groups	285
-----------------------------------------------------	-----

Appendix 2 Matrices of Orthogonal Irreducible Representations of the Point Groups	289
------------------------------------------------------------------------------------------	-----

Appendix 3 Tables for the Reduction of the Representations $U_{2j+1}^{[\lambda]}$ to the Group R_3	293
-----------------------------------------------------------------------------------------------------------------------------------	-----

Appendix 4 Character Tables for the Permutation Groups π_2 to π_8	296
--------------------------------------------------------------------------------------------------------	-----

Appendix 5 Matrices of the Orthogonal Irreducible Representations for the Permutation Groups π_3 to π_6	299
----------------------------------------------------------------------------------------------------------------------------------------------	-----

Appendix 6 Tables of the Matrices $\langle r'^{\lambda'} P_{ab}^{N-1N} r \rangle^{[\lambda]}$ for Values of N from 3 to 6	315
--------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

Appendix 7 Tables of the Matrices $\langle (r'_1 r_2)^{\lambda' \lambda''} P_{ac}^{N-1N} r_1 r_2 \rangle^{[\lambda]}$ for Values of N from 3 to 6	331
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----
