A WILEY-INTERSCIENCE PUBLICATION

SECOND EDITION

JOHN WILEY & SONS

New York · London · Sydney · Toronto

Immo. - N4 · 3857

# *contents*

## **1 *Fundamental Principles and Conventions, 1***

- Reversible Cells and Potential, 1
- Chemical Potential and Activity, 5
- Hydrogen Ion Equilibria, 11
- Conventions of E.M.F. Measurements, 12

## **2 *pH Scales, 15***

- Rational Scales of Acidity, 16
- Hydrogen Ion Concentration, 17
- The Sørensen pH Scale, 18
- Hydrogen Ion Activity, 21
- pH Scales Based on Mean Ionic Activities, 23
- Choice of a Standard pH Unit, 26
- Operational Definition of the Measured pH, 29
- Limitations of the pH, 30

## **3 *Liquid Junction Potentials and Ionic Activities, 31***

- Individual Ionic Activity Coefficients, 32
- Calculation of the Liquid-Junction Potential, 36
- Elimination of the Liquid-Junction Potential, 44
- Estimation of Ionic Activity Coefficients, 47
- Ionic Activities and Cells Without Liquid Junction, 50
- The Residual Liquid-Junction Potential, 54
- pH at Surfaces, 57

**4 pH Standards, 59**

- The Standard Potential, 60
- The Cohn Method of pH Standardization, 63
- $p\alpha_{\text{H}}$  of Reference Solutions, 66
- Assignment of pH(S) Values to NBS Standards, 71
- Equimolar Phosphate Buffer Solutions, 75
- Phthalate Buffer Solutions, 79
- Borax Buffer Solutions, 80
- Tartrate Buffer Solutions, 82
- Citrate and Carbonate Buffer Solutions, 84
- Standards for pH Measurements of Blood, 84
- Internal Consistency of the Standard Scale, 85
- Secondary Standards, 86
- Properties of the NBS pH Standards, 90
- The British Standard pH Scale, 99
- Other National pH Methods, 101
- IUPAC Recommendations, 102
- Interpretation of pH, 103

**5 Properties of Buffer Solutions, 105**

- Buffer Action, 105
- The Buffer Value, 107
- Dilution Effects, 111
- Salt Effects, 118
- $p\alpha_{\text{H}}$  and Temperature, 122
- Effect of Pressure Changes, 126
- Buffers for pH Control, 127

**6 Measurements of Acidity with Indicators, 134**

- Behavior of Acid-Base Indicators, 135
- Detailed Treatment of Indicator Equilibria, 143
- Colorimetric Techniques for pH Measurement, 158
- Indicator Test Papers, 162
- Limitations of Indicator Measurements, 163
- The Hammett Acidity Function, 165

**7 Acidity and Basicity in Nonaqueous Solutions, 170**

- Concepts of Acids and Bases, 170
- The Hydrogen Ion, 175
- Solvation Energies of Ions, 177
- Acidity Potential and Proton Activity, 180
- Hammett Acidity Functions, 194
- Oxidation-Reduction Potentials, 196
- Acidity in Nonaqueous Amphiprotic Media, 199
- Acidic Solvents, 200
- Basic Solvents, 204
- Dipolar Aprotic Solvents, 205
- Nonpolar Aprotic Solvents, 208

**8 Medium Effects and pH in Nonaqueous and Mixed Solvents, 211**

- Nature of the Medium Effect, 212
- Medium Effect and Salt Effect, 215
- Medium Effects from the Born Equation, 218
- Ion-Solvent Interaction Energy, 220
- Medium Effect and the Dissociation Constant, 221
- Determination of the Medium Effect for the Proton, 225
- pH Values on the Water Scale, 234
- Acidity Functions in Water-Alcohol Mixtures, 237
- Relative Hydrogen Ion Activity, 241
- Standard pH Scale for Water-Alcohol Mixed Solvents, 243
- Nature of the pH\* Scale, 249
- Measurement of pD in Deuterium Oxide, 251

**9 The Measurement of Hydrogen Ion Concentration, 254**

- Equilibrium Constants, 254
- Biological Media, 255
- Constant Ionic Media, 256
- Cells Without Liquid Junction, 258
- Cells With Liquid Junction, 261
- Magnitude of the Liquid-Junction Potential, 263
- Standardization of Titration Curves, 265
- Standard Reference Solutions, 268
- Hydrogen Ion Concentration in Mixed Solvents, 276

**10 *Cells, Electrodes, and Techniques, 279***

- The Hydrogen Electrode, 279
- The Quinhydrone Electrode, 294
- The Antimony Electrode, 300
- Other Hydrogen Ion Electrodes, 304
- Calomel Reference Electrodes and Liquid Junctions, 306
- Silver-Silver Chloride Electrodes, 328
- Thallium Amalgam-Thallos Chloride Electrode, 335
- Temperature Coefficients of Cells and Electrodes, 337

**11 *Glass Electrodes, 340***

- The pH Response, 341
- Structure of Electrode Glasses, 344
- Hygroscopicity and pH Response, 347
- Chemical Durability and Voltage Departures, 349
- Electrical Resistance, 351
- Composition of Electrode Glasses, 358
- The Asymmetry Potential, 360
- Development of the Surface Potential, 363
- The Alkaline Error, 364
- The Acid Error, 365
- Theory of the Glass Electrode, 368
- The Glass Electrode in Nonaqueous and Partially Aqueous Media, 372
- The Glass Electrode in Deuterium Oxide, 375
- Internal Reference Cells, 376
- Commercial Glass Electrodes, 384
- Care of Glass Electrodes, 386
- Light Effects, 390

**12 *Measurement of Electromotive Force. The pH Meter, 391***

- Potentiometers, 391
- Galvanometers, 392
- Standard Cells, 394
- Types of pH Meter, 399
- Amplifiers and Their Characteristics, 400
- Commercial pH Meters, 406
- Grid Current, 408

Effect of Humidity, 410  
 Temperature Effects, 411  
 Standard Cell of the pH Meter, 416  
 Performance Tests, 416  
 Adjustments and Repairs, 420  
 Determination of pH Values, 422  
 Automatic Titrators, 426  
 pH-stats, 428

### 13 Industrial pH Control, 429

Cell Assemblies, 429  
 Electrodes, 431  
 Amplifiers, Recorders, and Controllers, 436  
 Principles of Automatic Control, 439  
 Buffer Action in pH Control, 442  
 Final Control Elements, 443  
 Industrial Installations, 445

### Appendix, 447

Table 1 Values of  $(RT \ln 10)/F$  from 0 to 100°C, 447  
 Table 2 Ion Product  $K_w$  of Water from 0 to 60°C, 448  
 Table 3 Vapor Pressure, Density, and Dielectric Constant of Water from 0 to 100°C, 448  
 Table 4 Constants of the Debye-Hückel Theory from 0 to 100°C, 449  
 Table 5 Dielectric Constants  $\epsilon$  of Pure Liquids, 450  
 Table 6 Approximate pH of Some Common Reagent Solutions Near Room Temperature, 452  
 Table 7  $p(a_H \gamma_{Cl})$  for Some Useful Solutions from 0 to 60°C, 453  
 Table 8 pH of the Clark and Lubs Buffer Solutions at 25°C, 460  
 Table 9 Compositions, Buffer Values  $\beta$ , and Dilution Values  $\Delta pH_{1/2}$  of Alkaline Buffer Solutions at 25°C, 462

Author Index, 465

Subject Index, 475
