

Tadamasa Shida

The Chemical Bond

A Fundamental Quantum-Mechanical Picture

With 40 Figures

Springer

Contents

1	The Electron: A Primadonna in Chemical Bonding	1
1.1	The Electrostatic Potential Felt by the Electron is Reflected in the Color of Matter	2
1.2	The Electron in a Square Well Potential	3
1.3	The Electron Spin: As Important as the Energy	8
1.4	A Brief History of the Quantum Mechanical Description of the Electron	12
1.4.1	The Birth of the Bohr Theory	12
1.4.2	The Birth of the Schrödinger Theory	14
2	Fundamentals of Quantum Mechanics:	
	A Prerequisite for Understanding the Chemical Bond	21
2.1	Basic Concepts, Postulates, Definitions and Methodology	21
2.1.1	Wavefunction Determines the Probability of Finding the Electron	21
2.1.2	Energy Eigenstates are Stationary	22
2.1.3	Any Physical Quantity has a Corresponding Operator which has its own Set of Eigenfunctions and Eigenvalues	24
2.1.4	Operators of Any Physical Quantity are Linear: Quantum Mechanical States are Superposable	24
2.1.5	Eigenfunctions are Normalizable	25
2.1.6	Superposition of Non-Degenerate States does not Lead to an Eigenstate	25
2.1.7	Superposition of Degenerate States does Lead to an Eigenstate	26
2.1.8	Definition of Hermitian Operators	26
2.1.9	Eigenfunctions of Hermitian Operators are Orthogonal	28
2.1.10	Eigenfunctions of Hermitian Operators are Complete	29
2.1.11	The Outcome of Observation: Eigenvalues vs. Expectation Values	29
2.1.12	The Product of Two Operators: Commutators and Simultaneous Eigenfunctions	30
2.1.13	Perturbation Method: Non-Degenerate Case	31
2.1.14	Perturbation Method: Degenerate Case	34

2.1.15	Calculus of Variation	38
2.2	Application of the Concepts Presented in Sect. 2.1 to the Problem of the Square Well Potential	41
2.2.1	Normalization of Eigenfunctions	41
2.2.2	Orthogonality of Eigenfunctions	41
2.2.3	Superposition of State: Example 1	42
2.2.4	Superposition of States: Example 2	43
2.2.5	Expectation Value of the Energy	44
2.2.6	Superposition of States: Example 3	44
2.2.7	An Example of the Perturbation Method: A Non-Degenerate Case	46
2.2.8	An Example of the Calculus of Variation: A Non-Degenerate Case	48
3	One-Electron Atoms: The Fundamental System	51
3.1	The Derivation of Energy and Orbital Angular Momentum of the Electron in a Coulombic Potential: An Outline	52
3.2	The Derivation of the Eigenfunctions and Eigenvalues of Energy and Orbital Angular Momentum for a Single Electron in a Coulombic Potential	54
3.2.1	A General Discussion of the Schrödinger Equation	54
3.2.2	An Eigenvalue Equation to Describe the Angular Component (A Digression): Orbital Angular Momentum Operators from the View Point of Classical Mechanics	56
3.2.3	The Eigenvalue Equation to Describe the Angular Component: Eigenfunctions and Eigenvalues	57
3.2.4	The Eigenvalue Equation to Describe the Radial Component: Eigenfunctions and Eigenvalues	59
3.2.5	Total Spatial Eigenfunction of the One-Electron Atom	61
3.3	Some Comments on the Solution for One-Electron Atoms	64
3.3.1	Degeneracy of the Spatial Eigenfunctions is n^2 -Fold without the Electron Spin Components, and is $2n^2$ -Fold with the Electron Spin Included	64
3.3.2	Representation of Real Forms of Spherical Surface Harmonics	65
3.3.3	A Relation between the Angular Dependence of Spherical Harmonics and the Orbital Angular Momentum	66
3.3.4	The Radial Potential	68
3.4	Angular Momentum in One-Electron Atoms	70
3.4.1	The Definition of Orbital Angular Momentum by the Commutative Relationship	70

3.4.2	The Generalized Angular Momentum	72
3.4.3	Eigenfunctions of the Electron Spin	74
3.4.4	Electron Spin Operators	76
4	Multi-Electron Atoms: The Building Blocks that Produce the Tremendous Variety of Molecules	79
4.1	A Requirement Imposed on the Energy Eigenfunction of Multi-Electron Atoms: The Pauli Exclusion Principle	80
4.2	The Energy of Multi-Electron Atoms: A Qualitative Consideration and the Concept of Electronic Shell Structure	84
4.3	The Angular Momentum of Multi-Electron Atoms: The Total Angular Momentum as a Physical Quantity to Characterize the State of Multi-Electron Atoms	89
4.3.1	Spin-Orbit Interaction in One-Electron Atoms	90
4.3.2	Couplings of Orbital Angular Momentum and Spin in Multi-Electron Atoms: Russell-Saunders Coupling	93
4.3.3	Coupled Angular Momentum of Multi-Electron Atoms (Case 1): Concrete Examples of the Procedure of Coupling	95
4.3.4	Coupled Angular Momentum of Multi-Electron Atoms (Case 2): Hund's Rules	98
4.3.5	Electronic Configuration in Atoms and Valence States	100
4.4	An Example of the Solution of Multi-Electron Atoms by the Hartree-Fock Method: For the Case of Ne	103
5	Born-Oppenheimer Approximation: Separation of Electronic Motion from Nuclear Motion in Chemical Bonding	107
6	The Hydrogen Molecular Ion: The Simplest, but the Most Fundamental System for Understanding Chemical Bonds	113
6.1	The Stability of the H_2^+ Ion (Explanation 1): Explanation by Invoking the Wave Packet of the Electron ...	114
6.1.1	The Eigenfunction of the H_2^+ Ion with the Proper Symmetry	115
6.1.2	The Motion of the Wave Packet of the Electron in H_2^+	120
6.2	The Stability of the H_2^+ Ion (Explanation 2): Qualitative Explanation in Terms of the Uncertainty Principle	123
6.3	The Stability of the H_2^+ Ion (Explanation 3): An Explanation in Terms of the LCAO-MO Method	124

6.3.1	Determination of the LCAO-MO of H_2^+ by the Use of Symmetry	125
6.3.2	Determination of the LCAO-MO of H_2^+ by Ritz's Calculus of Variation	126
6.3.3	Coulomb Integral and the Exchange Integral of the H_2^+ System	128
6.4	A Few Topics of Study in the H_2^+ System	130
7	The Hydrogen Molecule:	
	Why are Two Neutral Hydrogen Atoms Stabilized by Simply Approaching Each Other?	133
7.1	It is Spectroscopic Experiments on the H_2 Molecule that have Paved the Way to Quantum Chemical Theory	134
7.2	The Heitler-London Theory	136
7.2.1	Eigenfunctions and Eigenvalues of Energy Ignoring the Effect of the Electron Spin	136
7.2.2	Eigenfunctions and Eigenvalues Inclusive of the Electron Spin	140
7.3	Development of the Heitler-London Theory	144
7.4	Molecular Orbital Treatments of the Hydrogen Molecule	146
8	Polyatomic Molecules: Towards an Understanding of Chemical Bonds in Polyatomic Molecules	149
8.1	The Schrödinger Equation for Multi-Electron Systems and its Approximate Solution	150
8.1.1	Outline of the Hartree-Fock Method to Include the Interelectronic Interaction	150
8.1.2	A Practical Solution to the Problem of Interelectronic Interaction: The Hartree-Fock-Roothaan Method	158
8.2	Examples of SCF-MO Calculations and Comparisons with Experimental Results	161
8.2.1	Computation for HF	162
8.2.2	Some Comments on Point Groups	165
8.2.3	Computed Orbital Energy as Compared with Experimental Observation	169
8.2.4	The Relationship between Canonical Molecular Orbitals and Localized Orbitals	172
8.2.5	A Critical Review of the Hybridized Orbital of Pauling	175
8.3	Critical Comments on the Classification of Chemical Bonds	179
8.3.1	Ionic Bond: NaCl, for Example	180
8.3.2	Ionic Bond: Is the Bonding in HCl Covalent or Ionic?	185
8.3.3	Coordinate Bond	186

8.4	Some Topics and Prospects for the Study of Chemical Bonding.....	187
8.4.1	Why does OF_6 not Exist, while SF_6 is a Stable Molecule?: The Discovery of CLi_6 as a Relevant Topic	188
8.4.2	Molecules Comprising Rare Gas Atoms.....	190
8.4.3	An Example of a Recent Study of the Hydrogen Bond	193
8.4.4	Interstellar Molecules	194
