## Theory and Estimation of Macroeconomic Rationing Models

Fachbereich Mathematik Technische Hochschule Darmstad Bibliothek

Inv.-Nr. B 18891

Springer-Verlag Berlin Heidelberg New York 1981

Introduction	1
<ol> <li>The Received Econometric Formulation of 2-Market Rationing Models.</li> </ol>	2
<ol> <li>Statement of the Problem</li> <li>Contents.</li> </ol>	5 7
Chapter I : Theoretical Foundations	
1. The Structure of Quantity Rationing Models	
a. Institutional setting : the rationing scheme	10
b. Information structure of the consumer : the perceived	17
rationing scheme c. Fauilibrium analysis	22
2. Effective Demand Theory	26
Chapter II : Econometric Formulation of a 2-Market Macroeconomic	
Model	34
1. First Generation Models	25
a. Underlying assumptions	30
c. On the necessity of accounting explicitly for uncertainty	
and disequilibrium	46
2. A Disequilibrium Rationing Model	
a. Number of regimes in a disequilibrium rationing model	51
b. Assumptions ensuring a 4-regime model with Well-defined	50
c. Analysis of the linear disequilibrium rationing model	56
d. Towards more general assumptions	61
3. Estimation Methods	
a. The Maddala-Nelson stochastic specification	64
b. The Ginsburgh-Tishler-Zang stochastic spécification	69
c. Which specification : MN of G12 ?	12
Appendix 1 : Proof of Proposition 2.2	76
Appendix 2 : Proof of Proposition 2.3	80
Appendix 3 : Proof of Lemma 2.5	81
Chapter III : A Macroeconomic Rationing Model of the Belgian Economy	85
1. A Modified Cobb-Douglas Model	87
2. Labor Hoarding	92
3. Demand for Goods and Labor Supply	97
4. Solvability of the Model 5. The Stochastic Model and the Estimation Procedure	101
6. Empirical Results : the Output-Employment Trade-Off	109
7. Estimation of the employment equation	112
Appendix 1 : Solvability of a ORM with Labor Hoarding	130
Appendix 2 : Data Definitions and Sources	132
Conclusion	134
References	136
