Contents

Foreword		V
Introduction		1
1.	Methods of time-resolved optical spectroscopy	5
1.1.	Microsecond and nanosecond flash spectrometers	5
1.1.1.	Microsecond flash spectrometers	5
1.1.2.	Laser flash photolysis on the nanosecond time scale	8
1.2.	Nanosecond fluorescence spectrometers	11
1.3.	Spectroscopy with picosecond time resolution	13
1.3.1.	Picosecond absorption spectrometers	15
1.3.2.	Picosecond fluorescence spectrometers	22
1.4.	Picosecond phase fluorometers	27
1.5.	Spectroscopy with femtosecond time resolution	31
1.6.	Time-resolved Raman spectrometers	33
1.7.	Investigation of polarization phenomena	36
1.7.1.	Time-resolved emission anisotropy	36
1.7.2.	Time-resolved circular dichroism	38
1.8.	Special methods	40
1.8.1.	Coherent methods	40
1.8.2.	Optical time-of-flight method	42
2.	Data analysis and interpretation	43
2.1.	Modulation methods	43
2.2.	Pulse response and deconvolution	46
2.2.1.	Deconvolution	46
2.2.2.	Rank analysis	50
2.2.3.	Multiexponential decay	52
2.2.4.	More complex kinetics	57
3.	Time-resolved optical spectroscopy of molecules	61
3.1.	Intramolecular processes	61
3.1.1.	Physical deactivation channels	61
3.1.1.1.	Vibrational relaxation	64
3.1.1.2.	Fluorescence	66
3.1.1.3.	Intersystem crossing	70
3.1.2.	Rotation around single and double bonds	77
3.1.3.	Photoejection of electrons	86
3.1.4.	Heterolytic and homolytic bond scission	89
3.1.5.	Intramolecular charge transfer, TICT	97
3.1.6.	Intramolecular proton transfer reactions	100

3.1.7.	Intramolecular hydrogen abstraction and photoenolization	110
3.1.8.	Photorearrangement, Valence tautomerizations	114
3.2.	Intermolecular processes	120
3.2.1.	Fluorescence quenching, Energy transfer	120
3.2.2.	Excimer formation	125
3.2.3.	Exciplex formation	127
3.2.4.	Electron transfer	129
3.2.5.	Kinetics of acid base equilibration	133
3.2.5.1.	Singlet excited states	133
3.2.5.2.	Triplet states	140
3.2.5.3.	Ground-state protolytic equilibria	142
3.2.6.	Hydrogen atom transfer reactions	145
3.2.7.	Cycloadditions and cycloreversions	149
3.2.8.	Photosubstitution reactions	152
3.3.	Dynamical processes in molecular complexes and organized molecules	156
3.3.1.	Electron-Donor-Acceptor complexes	156
3.3.2.	Aggregation	157
3.3.3.	Processes of molecules in the adsorbed state	160
3.3.4.	Dynamical processes in micelles and membranes	163
4.	Time-resolved optical spectroscopy of polymers	171
4.1.	Phosphorescence and fluorescence	171
4.2.	Photoisomerization	174
4.3.	Energy transfer and migration	174
4.4.	Excimers and exciplexes	176
4.5.	Determination of scission and crosslinking	179
4.6.	Molecular motion below T_g	180
5.	Time-resolved optical spectroscopy of solids	182
5.1.	Interaction of radiation with solids	182
5.1.1.	Optical properties of F-center crystals	182
5.1.2.	Molecular crystals	184
5.1.3.	Optics of semiconductors	185
5.2.	Dynamical processes in F-center crystals	192
5.3.	Dynamical processes in molecular crystals	193
5.4.	Dynamical processes in semiconductors	195
5.4.1.	Photoabsorption and carrier generation	197
5.4.2.	Intraband relaxation	198
5.4.3.	Linear and nonlinear recombination, Interband transitions	204
5.4.3.1.	Fluorescence or nonradiative processes	206
5.4.3.2.	Linear and nonlinear recombination	208
5.4.4.	Carrier diffusion	213
