Contents

CL-1 Gravity Loads and Temperature Effects

1.1	Introduction	3
	1. Classification	3
	2. Significance of Load Intensities	4
1.2	Dead Load	4
	1. Computation of Dead Load	4
	2. Variations in Computation of Dead Load	5
1.3	Live Load	7
	1. Live-load Determination	7
	2. Live-load Magnitudes	8
	3. Variations in Live Loads	8
	4. Live-load Reductions	15
1.4	Impact and Cyclic Loads	20
	1. Structural Response	20
	2. Human Tolerance of Vibrations	20
	3. Specification of Impact and Cyclic Loads	20
	4. Noise and Vibration Problems	21
1.5	Snow Loads and Temperature Effects	21
	1. Snow Loading	22
	2. Temperature Effects	24
1.6	Construction Loads	30
1.7	Combined Loading	34
	1. General	34
	2. Limit States Design Method	36
1.8	Load Surveys and Statistical Evaluation	37
	1. Survey Results	39
	2. Conclusions on Load Surveys	42
1.9	Condensed References/Bibliography	43

CL-2 Earthquake Loading and Response

2.1	Introduction	47
	1. Earthquake Ground Motion	47

Tall Building Criteria and Loading

2.	Dynamic Characteristics of Soil-Structure Systems	48
3.	Analysis of Dynamic Response	49
4.	Observation of Structural Behavior	50
5.	Evaluation of Earthquake Damage	51
6.	Economic and Social Aspects	52
7.	Code Requirements	53
2.2	Earthquake Ground Motion	54
1.	Nature of Ground Shaking Generated by Fault	56
2.	Intensity, Epicenter, Magnitude	57
3.	Influence of Geology on Seismic Waves	58
4.	Duration of Strong Earthquake Motion	60
5.	Response Spectra of Ground Motions	61
6.	Estimating Future Ground Motions	62
2.3	Dynamic Characteristics of Soil-Structure Systems	70
1.	Effects of Soil on Dynamic Response of Buildings	71
2.	Evaluation of Soil-Structure Interaction Effects	72
3.	Methods of Determining the Effect of Soil Conditions on Ground Motion Characteristics	74
4.	Conclusion	81
2.4	Analysis of Dynamic Response	83
1.	Types of Tall Buildings	88
2.	Behavior of Tall Buildings	89
3.	Idealized Linear Models	89
4.	Components of Motion	94
5.	Idealized Inelastic Systems	98
6.	Analysis	98
7.	The Reserve Energy Technique	99
8.	Vertical Motion	99
9.	Probabilistic Models	100
2.5	Observation of Structural Behavior	101
1.	Static Laboratory Studies	102
2.	Dynamic Laboratory Studies	103
3.	Static Field Studies	105
4.	Dynamic Field Studies	106
2.6	Evaluation of Earthquake Damage	110
1.	Performance of Buildings During Earthquakes	111
2.	Conclusions	119
2.7	Economic and Social Aspects	119
1.	Seismic Risk	121
2.	Establishing Design Criteria	121
3.	Damage Probabilities	124
4.	Vibration Hazard and Perception	125
5.	Present Needs	128
2.8	Code Requirements	129
1.	Base Shear Coefficients and Lateral Seismic Coefficients	130
2.	Vertical Forces	135
3.	Control of Lateral Deflections and Separation of Buildings	136
4.	Torsional Effects	136
5.	Overturning Moments	136
6.	Allowable Stress	137
7.	Dynamic Analyses	137
2.9	Condensed References/Bibliography	138

CL-3 Wind Loading and Wind Effects

Systems	48	3.1	Introduction	145
	49	3.2	Design Problems and Criteria	146
	50	1.	Early Studies	146
	51	2.	Response to Wind Action	147
	52	3.	Progression Towards Collapse of Structural Frame in Wind	148
ult	56	4.	Excessive Deflections and Damage to Architectural Finishes	151
	57	5.	Cladding and Glass Design—Stack Effect Internal Pressures	152
	58	6.	Comfort of Occupants and Acceleration Threshold	152
	60	7.	Wind in Pedestrian Areas	155
	61	8.	Other Problems	157
	62	9.	Statistical Description of Design Criteria	157
Buildings	71	3.3	Meteorological Factors in the Design of Tall Buildings	159
ects	72	1.	Scales of Motion	159
Conditions	74	2.	Properties of the Mean Wind	161
	81	3.	Change of Terrain Roughness	163
	83	4.	Cyclones, Tropical Cyclones, Tornadoes, and Thunderstorms	163
	88	5.	Climatological Properties of Wind	167
	89	6.	Turbulence Structure	172
	89	3.4	Wind Loading Mechanism and Full-Scale Examples	177
	94	1.	Response of Tall Buildings to Wind	177
	98	2.	Along-Wind and Cross-Wind Response	177
	98	3.	Torsional Response	183
	99	4.	Cladding Pressures on Tall Buildings	184
	99	3.5	Analytical Approaches to Estimation of Load and Response	187
100	101	1.	Along-Wind	188
101	102	2.	Analysis of Acceleration (Comfort) Criteria	198
102	103	3.	Cross-Wind	198
103	105	4.	Design Pressure for Glass and Cladding	200
105	106	3.6	Wind Tunnel Modeling Approaches to Design	201
106	110	1.	Types of Wind Tunnel Tests	202
110	111	2.	Model Scaling Requirements	202
111	119	3.	Natural Wind Models	204
119	121	4.	Aeroelastic Models	207
121	121	5.	Pressure Measurements on Models	211
124	124	6.	Ground Level Wind Distributions	212
125	125	7.	Dispersal of Gaseous Pollutants	213
128	128	8.	Wind Tunnel Test Expectations	216
129	129	3.7	Integration of Response and Wind Data for Design Purposes	217
Coefficients	130	1.	Prediction of Extreme Response	217
	135	2.	Prediction of Numbers of Occurrences	222
on of	136	3.	Prediction of Horizontal Accelerations Affecting Human Comfort	223
	136	4.	Prediction of Cladding Loads	223
	136	3.8	Environmental Wind Flows Around Buildings	227
	137	1.	Wind Flow Around a Building	227
	137	2.	Environmental Wind Speed Criteria	229
	138	3.	Prediction of Wind Environment Around a Building	233

	4. Guidelines for Avoiding High Induced Wind Speeds at Ground Level	237
3.9	Code Design	239
3.10	Concluding Remarks	241
3.11	Condensed References/Bibliography	242

CL-4 Fire

4.1	Introduction	251
4.2	Natural Fires, Standard Fires, and Fire Loads	253
	1. Ignition and Spread of Fire	253
	2. Fully Developed Building Fires	255
	3. Fire Loads	258
4.3	Structural Behavior	258
	1. Concrete Structures	258
	2. Steel Structures	262
4.4	Structural Protection: Requirements and Quality Control	271
	1. Fire Resistance Standards	271
	2. Material Characteristics	272
	3. Suggestions for Improved Reliability of Protection	273
4.5	Nonstructural Protection	275
	1. Chemical Aspects	275
	2. Smoke Control	278
	3. Panic Reaction	296
4.6	Architectural Layout and Details	306
	1. Space Around Building	306
	2. Space Within Building	306
	3. Construction Details	308
	4. Security Considerations	309
4.7	Safety Devices	309
	1. Fire Detection	309
	2. Communications	311
	3. Containment of the Fire	311
	4. Movement of Occupants to Safe Areas	314
	5. Control of Flow of Smoke and Hot Gases	316
	6. Concluding Remarks	317
4.8	Particular Types of Occupancy	317
	1. Assembly Occupancies	318
	2. Educational Occupancies	318
	3. Health Care (Institutional) Occupancies	319
	4. Residential Occupancies	320
	5. Mercantile Occupancies	321
	6. Office Occupancies	321
	7. Industrial Occupancies	322
	8. Storage Occupancies	322
	9. Buildings under Construction	323
4.9	Provisions for Firefighting	324
	1. Preplanning	324
	2. Access to Fire	325
	3. Communications	326
	4. Central Control Stations	326
	5. Sprinklers and Compartmentation	326
	6. Standpipes	327

CL-6 Quality Criteria

6.1	Introduction	441		
	1. Quality Control and Construction Management	441		
	2. Contract Documents, Criteria, and Quality Control	441		
	3. Quality Control Personnel	444		
	4. Material Selection	445		
	5. Shop Fabrication	446		
	6. Field Construction	446		
	7. Record Keeping	449		
6.2	Structural Steel	449		
	1. Properties of Structural Steel	449	7.2	Asse
	2. Steel Grades Used in Tall Buildings	449		
	3. Tension Test Properties	454		
	4. Residual Stresses	457		
	5. Cross-Sectional Properties	462		
	6. Quality of Fabrication of Structural Steel	462	7.3	Cod
	7. Lamellar Tearing	465		
6.3	Concrete	467		
	1. Compressive Strength Control	467		
	2. Quality of Pumped Concrete	477		
	3. Factors Influencing Quality of High-Strength Concrete	479		
	4. Quality of Precast Concrete	486		
	5. Quality of Cast-in-Place Concrete	488		
	6. Quality of Reinforcing Steel Placement	490		
	7. Formwork	492		
	8. Effects of Dimensional Variations	492		
	9. Project Supervision and Coordination	497	7.4	The
6.4	Quality of Concrete Masonry Construction	498		
	1. Production of Structural Concrete Masonry Units	498		
	2. Testing of Masonry Units, Mortar, Grout, and Assemblages	502		
	3. Field Inspection	507		
6.5	Engineered Brick Masonry	508	7.5	Load
	1. Prism Tests Versus Brick Tests	509		
	2. Compression Testing Large Size Structural Brick	511		
	3. Absorption	512		
	4. Mortar Testing	513		
	5. Flexural Bond Strength	514
