

Pioneers of Science

Nobel Prize Winners in Physics

Robert L Weber

Second Edition

Adam Hilger, Bristol and Philadelphia

Contents

Preface		xvii
Introduction		1
1901	Wilhelm Conrad Röntgen (German) Discovery of x-rays	7
1902	Pieter Zeeman (Dutch) Hendrik Antoon Lorentz (Dutch) Influence of magnetism on radiation	10 12
1903	Antoine Henri Becquerel (French) Discovery of spontaneous radioactivity Pierre Curie (French) Work on radioactivity Marie Skłodowska Curie (French, Polish-born) Discovery of radium and polonium	15 17 20
1904	John William Strutt, Third Baron Rayleigh (British) Densities of gases, discovery of argon	23
1905	Philipp Lenard (German, Hungarian-born) Work on cathode rays	26
1906	Sir Joseph John Thomson (British) Investigation of the conduction of electricity by gases	29
1907	Albert Abraham Michelson (American, German-born) Instruments of precision for spectroscopy and metrology	31
1908	Gabriel Lippmann (French, Luxembourg-born) Colour photography based on interference	34
1909	Guglielmo Marconi (Italian) Carl Ferdinand Braun (German) Development of wireless telegraphy	36 38

1910	Johannes Diderik van der Waals (Dutch) Equations of state for gases and liquids	40
1911	Wilhelm Carl Werner Otto Fritz Franz Wien (German) Laws of heat radiation	42
1912	Nils Gustaf Dalén (Swedish) Automatic regulator for lighting lighthouses and buoys	45
1913	Heike Kamerlingh Onnes (Dutch) Low-temperature physics, production of liquid helium	47
1914	Max Theodor Felix von Laue (German) Diffraction of x-rays by crystals	49
1915	Sir William Henry Bragg (British) Sir William Lawrence Bragg (British) Analysis of crystal structure by x-rays	51 54
1916	No award	
1917	Charles Glover Barkla (British) Discovery of the characteristic x-rays of the elements	56
1918	Max Karl Ernst Ludwig Planck (German) Discovery of energy quanta	58
1919	Johannes Stark (German) Discovery of the Doppler effect in canal rays and of the splitting of spectral lines in an electric field	60
1920	Charles-Edouard Guillaume (French) Discovery of anomalies in nickel–steel alloys useful in precision instruments	62
1921	Albert Einstein (German) Contributions to mathematical physics and discovery of the law of the photoelectric effect	64
1922	Niels Hendrik David Bohr (Danish) Atomic structure and radiation	67
1923	Robert Andrews Millikan (American) Measurement of the electron's charge; the photoelec- tric effect	70
1924	Karl Manne Georg Siegbahn (Swedish) X-ray spectroscopy	73

1925	James Franck (German)	75
	Gustav Ludwig Hertz (German)	78
	Laws governing the impact between an electron and an atom	
1926	Jean Baptiste Perrin (French)	80
	Brownian motion, equilibrium in sedimentation	
1927	Arthur Holly Compton (American)	82
	Compton effect; reduction in energy of a photon by interaction with a free electron	
	Charles Thomson Rees Wilson (British)	85
	Use of vapour trails to show paths of electrically charged particles	
1928	Sir Owen Willans Richardson (British)	88
	Thermionic phenomena; Richardson's law	
1929	Louis-Victor Pierre Raymond, Prince de Broglie (French)	91
	Discovery of the wave nature of the electron	
1930	Sir Chandrasekhara Venkata Raman (Indian)	93
	Scattering of light; the Raman effect	
1931	No award	
1932	Werner Karl Heisenberg (German)	95
	Creation of quantum mechanics; discovery of the allotropic forms of hydrogen	
1933	Paul Adrien Maurice Dirac (British)	97
	Erwin Schrödinger (Austrian)	99
	New and fruitful forms of atomic theory	
1934	No award	
1935	Sir James Chadwick (British)	101
	Discovery of the neutron	
1936	Victor Franz Hess (Austrian)	104
	Discovery of cosmic radiation	
	Carl David Anderson (American)	106
	Discovery of the positron	
1937	Clinton Joseph Davisson (American)	109
	Sir George Paget Thomson (British)	112
	Diffraction of electrons by crystals	
1938	Enrico Fermi (American, Italian-born)	114
	New radioactive elements produced by neutron irradiation; discovery of nuclear reactions brought about by slow neutrons	

1939	Ernest Orlando Lawrence (American) Invention of the cyclotron; investigation of artificial radioactive elements	117
1940–42	No awards	
1943	Otto Stern (American, German-born) Molecular ray method; magnetic moment of the proton	119
1944	Isidor Isaac Rabi (American, Austrian-born) Resonance method to measure magnetic properties of atomic nuclei	122
1945	Wolfgang Pauli (American, Austrian-born) Formulation of the Pauli exclusion principle	125
1946	Percy Williams Bridgman (American) Invention of apparatus and discoveries in the field of high-pressure physics	127
1947	Sir Edward Victor Appleton (British) Physical properties of the high atmosphere; discovery of the Appleton layer	129
1948	Baron Patrick Maynard Stuart Blackett (British) Improvement of the Wilson cloud chamber and resulting discoveries in nuclear physics and cosmic rays	131
1949	Hideki Yukawa (Japanese) Theoretical prediction of the existence of mesons	133
1950	Cecil Frank Powell (British) Photographic method of studying nuclear processes; discoveries concerning mesons	135
1951	Sir John Douglas Cockcroft (British) Ernest Thomas Sinton Walton (Irish) Transmutation of atomic nuclei by artificially accelerated atomic particles	137 140
1952	Felix Bloch (American, Swiss-born) Edward Mills Purcell (American) Methods for nuclear magnetic precision measurements and related discoveries	142 145
1953	Frits Zernike (Dutch) Demonstration of the phase-contrast method, invention of the phase-contrast microscope	147

1954	Max Born (British, German-born) Statistical interpretation of the wavefunctions in quantum mechanics	150
	Walther Wilhelm Georg Bothe (German) The coincidence method of counting used in nuclear and cosmic-ray research	153
1955	Willis Eugene Lamb Jr (American) Discovery of the Lamb shift in the hydrogen spectrum	155
	Polykarp Kusch (American, German-born) Precise determination of the magnetic moment of the electron	157
1956	John Bardeen (American) Walter Houser Brattain (American) William Shockley (American) Semiconductor research; discovery of the transistor effect	159 161 163
1957	Chen Ning Yang (American, Chinese-born) Tsung Dao Lee (American, Chinese-born) Demonstration of the failure of the so-called parity law in weak nuclear interactions	165 167
1958	Pavel Alekseivich Cherenkov (Russian) Ilya Mikhailovich Frank (Russian) Igor Evgenievich Tamm (Russian) Discovery and interpretation of the Cherenkov effect	169 171 173
1959	Owen Chamberlain (American) Emilio Gino Segrè (American, Italian-born) Discovery of the antiproton	175 177
1960	Donald Arthur Glaser (American) Invention of the bubble chamber	179
1961	Robert Hofstadter (American) Discoveries concerning the structure of the nucleus through electron scattering	182
	Rudolf Ludwig Mössbauer (German) Resonance absorption of gamma radiation, the Mössbauer effect	184
1962	Lev Davidovich Landau (Russian) Theories for condensed matter, especially liquid helium	186

1963	Eugene Paul Wigner (American, Hungarian-born) Theory of the atomic nucleus and elementary particles through discovery and application of symmetry principles	188
	Maria Goeppert-Mayer (American, German-born)	190
	J Hans D Jensen (German) Development of the nuclear shell model	193
1964	Charles Hard Townes (American)	195
	Nikolai Gennadievich Basov (Russian)	197
	Alexander Mikhailovich Prokhorov (Russian) Work in quantum electronics which led to the construction of oscillators and amplifiers based on the maser/laser principle	199
1965	Richard Phillips Feynman (American)	201
	Julian Seymour Schwinger (American)	203
	Sin-itiro Tomonaga (Japanese) Research in quantum electrodynamics which contributed to the understanding of elementary particles in high-energy physics	205
1966	Alfred Kastler (French) Optical methods for studying Hertzian resonances in atoms	207
1967	Hans Albrecht Bethe (American, German-born) Theory of nuclear reactions, energy production in stars	210
1968	Luis Walter Alvarez (American) Development of the hydrogen bubble chamber and methods of data analysis	212
1969	Murray Gell-Mann (American) Classifications of elementary particles and their interactions	215
1970	Hannes Olof Gösta Alfvén (Swedish) Research in magnetohydrodynamics and plasma physics	217
	Louis Eugène Félix Néel (French) Discoveries in antiferromagnetism and ferrimagnetism important in solid state physics	219
1971	Dennis Gabor (British, Hungarian-born) Invention of holography	221

1972	Leon N Cooper (American)	224
	John Robert Schrieffer (American)	227
	John Bardeen (American)	(159)
	Theory of superconductivity	
1973	Leo Esaki (Japanese)	229
	Discovery of tunnelling in semiconductors	
	Ivar Giaever (American, Norwegian-born)	231
	Discovery of tunnelling in superconductors	
	Brian David Josephson (British)	233
	Theoretical prediction of a supercurrent through a tunnel barrier, the Josephson effect	
1974	Antony Hewish (British)	235
	Research in radio astrophysics; discovery of pulsars	
	Martin Ryle (British)	237
	Development of radio telescopes, technique of aperture synthesis	
1975	Aage Niels Bohr (Danish)	239
	Ben Roy Mottelson (Danish, American-born)	241
	Leo James Rainwater (American)	243
	Theory of the atomic nucleus based on the connection between collective motion and particle motion	
1976	Burton Richter (American)	245
	Samuel Chao Chung Ting (American)	247
	Independent discoveries of the psi or J particle believed to be the smallest building block of matter	
1977	John Hasbrouck van Vleck (American)	249
	Electronic structure of magnetic and disordered systems	
	Sir Nevill Francis Mott (British)	251
	Philip Warren Anderson (American)	253
	Discoveries in solid state physics that led to the use of amorphous material, such as glass, in electronic switching and memory devices	
1978	Peter Leonidovich Kapitza (Russian)	255
	Inventions and discoveries in low-temperature physics	

	Arno A Penzias (American, German-born)	257
	Robert Woodrow Wilson (American)	259
	Discovery of cosmic microwave radiation said to be the remnant of a primordial fireball	
1979	Steven Weinberg (American)	261
	Abdus Salam (Pakistani)	263
	Sheldon Lee Glashow (American)	265
	Independent development of a theory that unifies electromagnetism and the weak nuclear force	
1980	James Watson Cronin (American)	267
	Val Logsdon Fitch (American)	269
	Discovery of violations of fundamental symmetry	
1981	Kai Manne Börje Siegbahn (Swedish)	271
	Development of electron spectroscopy	
	Nicolaas Bloembergen (Dutch)	273
	Arthur Leonard Schawlow (American)	275
	Development of laser spectroscopy	
1982	Kenneth Geddes Wilson (American)	277
	Theory for critical phenomena in phase transitions	
1983	William Alfred Fowler (American)	279
	Subrahmanyan Chandrasekhar (Indian)	281
	Studies of physical processes in the structure and evolution of stars	
1984	Carlo Rubbia (Italian)	284
	Simon van der Meer (Dutch)	287
	Discovery of the subatomic field particles W^+ , W^- and Z	
1985	Klaus von Klitzing (German)	289
	Discovery of the quantised Hall effect	
1986	Ernst Ruska (German)	292
	Design of the first electron microscope	
	Heinrich Rohrer (Swiss)	295
	Gerd Binnig (German)	297
	Development of the scanning tunnelling microscope	
1987	Karl Alex Müller (Swiss)	300
	J Georg Bednorz (German)	302
	Discovery of high-temperature superconductivity in copper oxide ceramic materials
