

Enzyme Catalysis in Organic Synthesis

A Comprehensive Handbook

Volume III

Edited by
Karlheinz Drauz and Herbert Waldmann

Second, Completely Revised and Enlarged Edition

Contents

Foreword V

Preface VII

Volume I

1 Introduction 1

Maria-Regina Kula

- 1.1 Enzymes as Catalysts 1
- 1.2 Enzyme Structure and Function 4
- 1.3 Cofactors and Coenzymes 12
- 1.4 Enzyme Nomenclature 21
- 1.5 Enzyme Kinetics 23
- 1.5.1 Reaction Rate and Substrate Concentration 23
- 1.5.2 Inhibitors and Effectors 26
- 1.5.3 Influence of pH and Buffers 27
- 1.5.4 Temperature 28
- 1.6 Organic Solvents as Reaction Media 31
- 1.7 Enzyme Handling: Quality Requirements 32
- 1.8 Biotransformation Using Whole Cells 33
- 1.8.1 General Aspects 33
- 1.8.2 Biotransformation with Growing Cells 36
- 1.8.3 Biotransformation with Resting Cells 37
- 1.8.4 Biotransformations with Permeabilized or Dried Cells 37
- Bibliography 38

2 Production and Isolation of Enzymes 41

Yoshihiko Hirose

- 2.1 Introduction 41
- 2.2 Enzyme Suppliers for Biotransformation 44
- 2.3 Origins of Enzymes 45
- 2.3.1 Microbial Enzymes 45
- 2.3.2 Plant Enzymes 46
- 2.3.3 Animal enzymes 46

2.4	Fermentation of Enzymes	46
2.4.1	Liquid Fermentation	46
2.4.2	Solid Fermentation	47
2.4.3	Extraction of Enzymes	47
2.5	Extraction of Enzymes	47
2.5.1	Microbial Enzymes	47
2.5.2	Plant Enzymes	48
2.5.3	Animal Enzymes	48
2.6	Concentration	48
2.7	Purification of Enzymes	49
2.7.1	Chromatography	49
2.7.1.1	Ion Exchange Chromatography (IEX)	49
2.7.1.2	Hydrophobic Interaction Chromatography (HIC)	54
2.7.1.3	Gel Filtration (GF)	56
2.7.1.4	Reversed Phase Chromatography	58
2.7.1.5	Hydrogen Bond Chromatography	59
2.7.1.6	Affinity Chromatography	59
2.7.1.7	Salting-out Chromatography	62
2.7.2	Precipitation	62
2.7.2.1	Precipitation by Salting out	62
2.7.2.2	Precipitation by Organic Solvents	63
2.7.2.3	Precipitation by Changing pH	63
2.7.2.4	Precipitation by Water-Soluble Polymer	63
2.7.3	Crystallization	64
2.7.4	Stabilization During Purification	64
2.7.5	Storage of Enzymes	64
2.7.5.1	Storage in Liquids	64
2.7.5.2	Storage in Solids	65
2.8	Commercial Biocatalysts	65
	References	66
3	Rational Design of Functional Proteins	67
	<i>Tadayuki Imanaka and Haruyuki Atomi</i>	
3.1	Protein Engineering	67
3.2	Gene Manipulation Techniques in Enzyme Modification	68
3.3	Protein Crystallization	70
3.4	Comparative Modeling of a Protein Structure	73
3.5	What is Needed to Take a Rational Approach?	75
3.6	Examples of Protein Engineering	76
3.6.1	Protein Engineering Studies: Providing a Rational Explanation for Enzyme Specificity	76
3.6.2	Enhancing the Thermostability of Proteases	78
3.6.3	Contribution of Ion Pairs to the Thermostability of Proteins from Hyperthermophiles	79

3.6.4	Thermostability Engineering Based on the Consensus Concept	80
3.6.5	Changing the Optimal pH of an Enzyme	81
3.6.6	Changing the Cofactor Specificity of an Enzyme	82
3.6.7	Changing the Substrate Specificity of an Enzyme	84
3.6.8	Changing the Product Specificity of an Enzyme	85
3.6.9	Combining Site-directed Mutagenesis with Chemical Modification	86
3.6.10	Changing the Catalytic Activity of a Protein	087
3.7	Conclusions	89
	References	90

4 Enzyme Engineering by Directed Evolution 95

Oliver May, Christopher A. Voigt and Frances H. Arnold

4.1	Introduction	95
4.2	Evolution as an Optimizing Process	96
4.2.1	The Search Space of Chemical Solutions	97
4.2.2	The Directed Evolution Algorithm	98
4.3	Creating a Library of Diverse Solutions	99
4.3.1	Mutagenesis	99
4.3.1.1	Random Point Mutagenesis of Whole Genes	99
4.3.1.2	Focused Mutagenesis	104
4.3.1.3	Calculation of Mutagenesis Hot-Spots	105
4.3.2	Recombination	107
4.3.2.1	<i>In Vitro</i> Recombination	107
4.3.2.2	<i>In vivo</i> Recombination	110
4.3.2.3	Family Shuffling	111
4.4	Finding Improved Enzymes: Screening and Selection	112
4.4.1	You Get What You Screen For	113
4.4.2	Screening Strategies	113
4.4.2.1	Low-Throughput Screening	114
4.4.2.2	High-Throughput Screening	115
4.4.2.3	Choosing Low versus High Throughput	116
4.4.2.4	Analyzing the Mutant Fitness Distribution	117
4.4.3	Selection and Methods to Link Genotype with Phenotype	119
4.5	Applications of Directed Evolution	121
4.5.1	Improving Functional Enzyme Expression and Secretion	122
4.5.2	Engineering Enzymes for Non-natural Environments	127
4.5.3	Engineering Enzyme Specificity	129
4.5.3.1	Substrate Specificity	129
4.5.3.2	Enantioselectivity	131
4.6	Conclusions	132
	References	133

5	Enzyme Bioinformatics	139
	<i>Kay Hofmann</i>	
5.1	Introduction	139
5.2	Protein Comparison	140
5.2.1	Sequence Comparison <i>versus</i> Structure Comparison	140
5.2.2	Substitution Matrices in Sequence Comparisons	141
5.2.3	Profile Methods	142
5.2.4	Database Searches	144
5.3	Enzyme-specific Conservation Patterns	145
5.3.1	General Conservation Patterns	145
5.3.2	Active Site Conservation Patterns	146
5.3.3	Metal Binding Conservation Patterns	146
5.3.4	Making Use of Conservation Patterns	148
5.4	Modular Enzymes	149
5.4.1	The Domain Concept in Structure and Sequence	149
5.4.2	A Classification of Modular Enzymes	150
5.4.3	Inhibitory Domains	151
5.5	Enzyme Databases and Other Information Sources	151
5.5.1	E. C. Nomenclature and ENZYME Database	152
5.5.2	BRENDA	152
5.5.3	KEGG and LIGAND database	153
5.5.4	UM-BBD	153
5.5.5	Structural Databases	153
5.5.6	Metalloprotein Databases	154
5.5.7	Databases for Selected Enzyme Classes	154
5.6	Protein Domain and Motif Databases	154
5.6.1	PROSITE	155
5.6.2	PFAM	156
5.6.3	Other Related Databases	156
5.7	Enzyme Genomics	156
5.7.1	Ortholog Search	157
5.7.2	Paralog Search	157
5.7.3	Non-homology Based methods	159
5.8	Outlook	159
	References	161
6	Immobilization of Enzymes	163
	<i>James Lalonde</i>	
6.1	Introduction	163
6.2	Methods of Immobilization	164
6.2.1	Non-Covalent Adsorption	165
6.2.2	Covalent Attachment	168
6.2.2.1	Carriers for Enzyme Immobilization	170
6.2.3	Entrapment and Encapsulation	171

6.2.4	Cross-Linking	175
6.3	Properties of Immobilized Biocatalysts	175
6.3.1	Mass Transfer Effects	176
6.3.2	Partition	176
6.3.3	Stability	177
6.3.4	Activity of Immobilized Enzymes	177
6.4	New Developments and Outlook	178
6.4.1	Cross-linked Enzyme Crystals (CLEC®)	179
6.4.2	Sol-Gel	181
6.4.3	Controlled Solubility "Smart Polymers"	181
	References	182

7 Reaction Engineering for Enzyme-Catalyzed Biotransformations 185

Manfred Biselli, Udo Kragl and Christian Wandrey

7.1	Introduction	185
7.2	Steps of Process Optimization	186
7.3	Investigation of the Reaction System	190
7.3.1	Properties of the Enzyme	190
7.3.2	Properties of the Reaction System	193
7.3.2.1	Thermodynamic Equilibrium of the Reaction	193
7.3.2.2	Complex Reaction Systems: The Existence of Parallel and Consecutive Reactions	195
7.3.2.3	Other Properties of the Reaction System	204
7.3.2.4	Application of Organic Solvents	204
7.4	Investigation of Enzyme Kinetics	208
7.4.1	Methods of Parameter Identification	209
7.4.2	The Kinetics of One-Enzyme Systems	210
7.4.2.1	THE Michaelis-Menten Kinetics	210
7.4.2.2	Competitive Inhibition	214
7.4.2.3	Non-Competitive Inhibition	215
7.4.2.4	Uncompetitive Inhibition	216
7.4.2.5	Reversibility of One-Substrate Reactions	217
7.4.2.6	Two-Substrate Reactions	218
7.4.2.7	Kinetics of Aminoacylase as Example of a Random Uni-Bi Mechanism	223
7.4.3	Kinetics of Multiple Enzyme Systems	230
7.5	Enzyme Reactors	232
7.5.1	Basic Reaction Engineering Aspects	232
7.5.2	Reactors for Soluble Enzymes	238
7.5.2.1	Reactor Optimization Exemplified by the Enzyme Membrane Reactor	241
7.5.2.2	Control of Conversion in a Continuously Operated EMR	249
7.5.3	Reactor Systems for Immobilized Enzymes	250
7.5.4	Reaction Techniques for Enzymes in Organic Solvent	251

7.6	Conclusions and Outlook	253
	References	254
8	Enzymic Conversions in Organic and Other Low-Water Media	259
	<i>Peter Halling</i>	
8.1	Introduction	259
8.2	Enzyme Form	260
8.2.1	Lyophilized Powders	260
8.2.2	Immobilized Enzymes	261
8.2.3	Cross-Linked Crystals	261
8.2.4	Direct Precipitation in Organic Solvents	262
8.2.5	Additives in Catalyst Powders	262
8.2.6	Solubilized Enzymes	263
8.3	Residual Water Level	264
8.3.1	Fixing Initial Water Activity of Reaction Components	266
8.3.2	Control of Water Activity During Reaction	269
8.3.3	“Water Mimics”	273
8.4	Temperature	274
8.5	Substrate (Starting Material) Concentrations	274
8.6	Solvent Choice	276
8.6.1	Effects on Equilibrium Position	276
8.6.2	“Solvent Effects” that Really are Not	276
8.6.3	Solvent Polarity Trend and Recommended Choices	277
8.6.4	Solvent Parameters	279
8.6.5	Solvent Effects on Selectivity	280
8.6.6	No Solvent or Little Solvent Systems	280
8.7	Acid-Base Conditions	281
8.7.1	pH Memory	281
8.7.2	Processes Erasing pH Memory	282
8.7.3	Systems for Acid-Base Buffering	283
	References	285
9	Enzymatic Kinetic Resolution	287
	<i>Jonathan M. J. Williams, Rebecca J. Parker, and Claudia Neri</i>	
9.1	Introduction	287
9.2	Alcohols and their Derivatives	288
9.2.1	Cyanohydrins	289
9.2.2	Other Readily Racemized Substrates	290
9.2.3	Enzyme and Metal Combinations	293
9.3	Carboxylic Acids and their Derivatives	297
9.3.1	Readily Enolized Carboxylic Acid Derivatives	297
9.3.2	Amino-Esters and Related Compounds	301
9.3.3	Reactions of cyclic amino acid derivatives	302
9.4	Reduction of β -Ketoesters	307

9.5	Conclusion	309
	References	310
10	Enzymes from Extreme Thermophilic and Hyperthermophilic Archaea and Bacteria	313
	<i>Costanzo Bertoldo and Garabed Antranikian</i>	
10.1	Introduction	313
10.2	Starch-Processing Enzymes	315
10.2.1	Thermoactive Amylolytic Enzymes	316
10.2.1.1	Heat-Stable Amylases and Glucoamylases	316
10.2.1.2	α -Glucosidases	317
10.2.1.3	Thermoactive Pullulanases and CGTases	317
10.3	Cellulose-Hydrolyzing Enzymes	321
10.3.1	Thermostable Cellulases	321
10.4	Xylan-Degrading Enzymes	324
10.4.1	Thermostable Xylanases	324
10.5	Chitin Degradation	325
10.6	Proteolytic Enzymes	326
10.6.1	Stable Proteases	327
10.7	Intracellular Enzymes	329
	References	331

11.4.1	Introduction	653
11.4.2	Starch	653
11.4.2.1	Classification of Starch-degrading Enzymes	654
11.4.2.2	α -Amylase (1,4- α -D-Glucan,4-Glucanhydrolase, E. C. 3.2.1.1)	655
11.4.2.3	β -Amylase (1,4- α -D-Glucan Maltahydrolase, E. C. 3.2.1.2)	656
11.4.2.4	Glucoamylases (1,4- α -D-glucan glucohydrolase, E. C. 3.2.1.3)	656
11.4.2.5	α -Glucosidase (α -D-Glucoside Glucohydrolase, E. C. 3.2.1.20)	657
11.4.2.6	Isoamylase (Glycogen 6-Glucanohydrolase, E. C. 3.2.1.68)	657
11.4.2.7	Pullulanase Type I (α -Dextrin 6-Glucanohydrolase, E. C. 3.2.1.41)	657
11.4.2.8	Pullulanase Type II or Amylopullulanase	658
11.4.2.9	Pullulan Hydrolases (Type I, Neopullulanase; Type II, Isopullulanase, E. C. 3.2.1.57, Pullulan Hydrolase Type III)	659
11.4.2.10	Cyclodextrin Glycosyltransferase (1,4- α -D-Glucan 4- α -D-(1,4- α -D-Glucano)-Transferase, E. C. 2.4.1.19)	659

11.4.2.11	Biotechnological Applications of Starch-degrading Enzymes	659
11.4.3	Cellulose	661
11.4.3.1	Cellulose-degrading Enzyme Systems	663
11.4.3.2	Endoglucanase (1,4- β -D-Glucan-Glucanohydrolase, E. C. 3.2.1.4)	663
11.4.3.3	Cellobiohydrolase (1,4- β -D-Glucan Cellobiohydrolase, E. C. 3.2.1.91)	663
11.4.3.4	β -Glucosidase (β -D-Glucoside Glucohydrolase, E. C. 3.2.1.21)	664
11.4.3.5	Fungal and Bacterial Cellulases	664
11.4.3.6	Structure and Synergistic Effect of Cellulases	665
11.4.4	Xylan	667
11.4.4.1	The Xylanolytic Enzyme System	668
11.4.4.2	Endoxylanase (1,4- β -D-Xylan Xylanohydrolase, E. C. 3.2.1.8)	670
11.4.4.3	β -Xylosidase (β -D-Xyloside Xylohydrolase, E. C. 3.2.1.37)	670
11.4.4.4	α -L-Arabinofuranosidase (E. C. 3.2.1.55)	671
11.4.4.5	α -Glucuronidase (E. C. 3.2.1.136)	671
11.4.4.6	Acetyl Xylan Esterase (E. C. 3.1.1.6)	672
11.4.4.7	Mechanism of Action of Endoxylanase	672
11.4.4.8	Biotechnological Applications of Xylanases	672
11.4.5	Pectin	673
11.4.5.1	Classification of Pectic Substances	675
11.4.5.2	Pectolytic Enzymes	675
11.4.5.3	Classification of Pectolytic Enzymes	676
11.4.5.4	Protopectinase	676
11.4.5.5	Pectin Methylsterase	677
11.4.5.6	Pectin and Polygalacturonate Depolymerizing Enzymes	677
11.4.5.7	Pectin and Polygalacturonate Hydrolase	678
11.4.5.8	Pectin and Polygalacturonate Lyase	679
11.4.5.9	Biotechnological Applications of Pectolytic Enzymes	680
