Contents

1 Wood fibre reinforced cement composites	1
R.S.P. Coutts	
1.1 Introduction	1
1.2 History and development of WFRC composites	2
1.3 The nature of wood	4
1.3.1 Wood structure	4
1.3.2 Chemical composition and durability	7
1.3.3 Pulping of wood	8
1.3.4 Refining or beating	9
1.4 Properties of wood fibres	11
1.4.1 Physical properties of wood fibres	11
1.4.2 Mechanical properties of wood fibres	13
1.4.3 The effect of moisture on wood fibres	14
1.5 Wood fibre reinforced cement composites	15
1.5.1 Theoretical principles of fibre reinforcement	16
1.5.2 Fabrication processes	23
1.5.3 Asbestos replacement	25
1.5.4 Mechanical properties of WFRC	28
1.5.5 Physical properties	36
1.5.6 Bonding and microstructure of WFRC composites	39
1.5.7 Durability of WFRC composites	46
1.6 Applications, specifications and test properties	48
1.6.1 Sheet products	48
1.6.2 Pipes	54
1.6.3 Moulded products	57
1.7 Concluding remarks	57
References	58
2 Wood fibre reinforced concrete	63
Asko Sarja	
2.1 Definition and classification	63
2.2 Functional principles of wood fibre concrete	66
2.2.1 Mineralization	66
2.2.2 Durability of wood fibres	68
2.3 Material properties	68
2.3.1 Mechanical properties	68
2.3.2 Physical properties	74
2.3.3 Durability properties	75
2.4 Production processes	75
2.4.1 Wood wool products	76
2.4.2 Wood chip cement products	76
2.4.3 Wood particle cement boards	76
2.4.4 Structural wood fibre concrete products	77
2.5 Products and their applications in construction	81
2.5.1 Wood wool	81

2.5.2	Wood chip cement	82
2.5.3	Wood particle cement boards	83
2.5.4	Structural wood fibre concrete	84
2.6	Other vegetable fibres	87
2.7	Concluding remarks	88
	References	88
3	Bamboo reinforcement for cement and concrete	92
	L. Robles-Austriaco and R.P. Pama	
3.1	Introduction	92
3.2	Bamboo and its properties	95
3.2.1	Physical properties	95
3.2.2	Mechanical properties	97
3.3	Bamboo as reinforcement	106
3.3.1	Bamboo reinforced structural components	107
3.3.2	Bamboo reinforced water resources structures	118
3.3.3	Bamboo reinforced utility structures	123
3.3.4	Bamboo reinforced soil-cement	126
3.3.5	Composites reinforced with bamboo fibres, pulps and strips	129
3.4	Recommended practices	135
3.4.1	Selection of bamboo	135
3.4.2	Preparation of bamboo	136
3.4.3	Construction procedure	136
3.5	Conclusions	137
	References	138
4	Durability of natural fibres in concrete	143
	Hans-Erik Gram	
4.1	Introduction	143
4.2	Historical background	144
4.3	Sisal fibre concrete	146
4.3.1	The constituents of natural fibre concrete	146
4.3.2	Structure of sisal fibres	146
4.3.3	Structure of concrete	148
4.4	Durability of natural fibres in concrete	153
4.4.1	Decomposition of sisal fibres in alkaline environments	153
4.4.2	Embrittlement of the composite due to ageing	157
4.5	Methods of improving the durability of sisal fibres in concrete	162
4.5.1	Actions dealing with the fibre	162
4.5.2	Actions dealing with the cement matrix	165
4.5.3	Combinations of fibre impregnation and changes of the cement matrix	169
4.6	Conclusions and future prospects	170
	References	171
5	Natural or modified cellulose fibres as reinforcement in cement composites	173
	Z. Fördös	
5.1	Introduction	173
5.2	Natural fibres	174
5.2.1	Wood fibres	176
5.2.2	Natural fibres of vegetable origin other than wood	177
5.3	Cellulose fibres	180

5.4	Processing of fibres	181
5.4.1	Mechanical pulping	181
5.4.2	Thermo-mechanical process (TMP)	182
5.4.3	Semi-chemical pulping	182
5.4.4	Chemical pulping	182
5.4.5	Dissolving pulp	182
5.5	Properties of fibres	184
5.6	Special problems with cellulose	184
5.6.1	Setting and curing of cement	187
5.6.2	Fibre form	187
5.6.3	Strength	187
5.6.4	Effect of season on fibre properties	188
5.6.5	Wet condition	188
5.6.6	Attack by micro-organisms	188
5.7	Fibre reinforced cement-based composites	188
5.8	Design of fibre cement composites	191
5.8.1	Volume fraction of fibre	191
5.8.2	Fibre forms	192
5.8.3	Fibre diameter	194
5.8.4	Fibre length and aspect ratio	194
5.8.5	Fibre orientation	195
5.8.6	Fibre shape	195
5.8.7	Constituent behaviour	196
5.9	Production of cellulose fibre reinforced cement-based materials	197
5.10	Materials and experimental techniques	198
5.10.1	Laboratory experiments	198
5.10.2	Full-scale experiments	199
5.11	Results and discussion	200
5.11.1	Laboratory results	200
5.11.2	Full-scale test results	200
5.11.3	Properties in the fresh state	203
5.11.4	Properties in the hardened state	205
5.11.5	Microstructure of cellulose-fibre cement-based materials	205
5.11.6	Long-term durability	205
5.12	Concluding remarks	206
	References	206
6	Vegetable fibre reinforced building materials – developments in Brazil and other Latin American countries	208
	Vahan Agopyan	
6.1	Introduction	208
6.2	Vegetable fibres	210
6.2.1	Prospective fibres for fibre-cements	211
6.2.2	Selected fibres	211
6.2.3	Coir fibres	215
6.2.4	Henequen or 'maguey' fibres	220
6.2.5	Malva fibres	223
6.2.6	Disintegrated newsprint	224
6.3	Fibre-cements	226
6.3.1	Bamboo and cane culms or sticks as reinforcement	227
6.3.2	Coir-cement	228
6.3.3	Henequen-cement	231
6.3.4	Sisal-cement	233
6.3.5	Cement reinforced with fibres other than bamboo, coir, henequen, and sisal	235
6.4	Final remarks	238
6.4.1	New research in progress	238

6.4.2	Vegetable reinforcement for non-cementitious matrices	238
6.4.3	Concluding comments	239
	References	240
7	Use of natural fibre concrete in India	243
	S.S. Rehsi	
7.1	Introduction	243
7.2	Properties of fresh fibre reinforced concrete	248
7.3	Properties of hardened fibre reinforced concrete	249
7.3.1	Mechanical properties	249
7.3.2	Alkali resistance	250
7.4	Production of fibre reinforced building boards and roofing sheets	251
7.4.1	Fibre gypsum plaster boards	251
7.4.2	Corrugated roofing sheets	252
7.5	Concluding remarks	253

	Hans-Erik Gram	
8.1	Introduction	256
8.2	Historical background	257
8.3	Properties of natural fibre concrete	257
8.3.1	Properties in the fresh state	257
8.3.2	Properties during the change from fresh to hardened state	259
8.3.3	Properties in the hardened state	259
8.3.4	Ageing, fibre deterioration and carbonation of the matrix	262
8.4	Production methods	262
8.4.1	General	262
8.4.2	Preparation of the constituent materials	263
8.4.3	Mixing	264
8.4.4	Casting	264
8.4.5	Curing and storing	265
8.4.6	Quality control	265
8.4.7	Village-level production	266
8.4.8	Small-scale industrial production	266
8.4.9	Automated production	268
8.5	Roofing products	268
8.5.1	Tiles	268
8.5.2	Sheets	270
8.5.3	Larger, self-supporting elements	275
8.6	Loads on roofing products	275
8.7	Costs	276
8.8	Evaluation of worldwide field study	277
8.9	Future prospects	284
