
HUMAN FACTORS IN AVIATION

Edited by

Earl L. Wiener
Department of Management Science
University of Miami
Coral Gables, Florida

David C. Nagel
Aerospace Human Factors Research Division
NASA-Ames Research Center
Moffett Field, California

With a foreword by Jerome Lederer

ACADEMIC PRESS
An Imprint of Elsevier

Amsterdam Boston Heidelberg London
New York Oxford Paris San Diego
San Francisco Singapore Sydney Tokyo

CONTENTS

Contributors *xiii*
Foreword *xv*
Preface *xix*

ONE Introduction

1 Introductory Overview
Elwyn Edwards

The Emergence of Aviation Ergonomics 3
The Early Pioneers 5
The War Years 7
A Definition of Human Factors 9
The SHEL Model 11
A Third Dimension 15
Skill and Error 17
The Contemporary Scene 21
Summary 24
References 24

2 The System Perspective
Thomas B. Sheridan

Introduction 27
Abstract Definition and Representation of Systems 34
What Is Gained by the System Perspective? 37
History and Practice of System Analysis 39
Goals, Decision, and Control 40
Supervisory Control: A New Approach to Systems 47
Conclusions 50
References 50

3 System Safety
C. O. Miller

System Safety and Semantics 53
Evolution of System Safety 56
System Safety and Human Factors: The Interface 60
System Safety Tasks 65
The Future and Its Challenges 72
Concluding Remarks 77
References 78

TWO Pilot Performance

4 The Human Senses in Flight
Herschel W. Leibowitz

Some History 83
Some Limitations of Vision: The See-and-Avoid Principle 85
Dual Approaches to Vision: Anatomical and Functional 86
Visual–Vestibular Interaction:
Spatial Disorientation and Motion Sickness 99
Perception of Motion 107
Limitations of Vision during Flight 108
Concluding Remarks 109
References 109

5 Information Processing
Christopher D. Wickens and
John M. Flach

Introduction 111
Perception 114

Memory 123
Decision Making 127
Selection of Action 137
Conclusion 148
References 149

6 Human Workload in Aviation
Barry H. Kantowitz and
Patricia A. Casper

Introduction 157
Why Workload Is Important 158
Defining and Measuring Workload 163
Attention and Workload 168
Selective Review of Empirical Workload Studies 171
Prospects 182
References 185

7 Group Interaction and
Flight Crew Performance
H. Clayton Foushee and
Robert L. Helmreich

Introduction 189
Groups in the Operational Environment 193
Classifying Group Performance Factors 197
Input Variables and the Flight Crew Process 200
Flight Crew Process Variables and Performance 207
Input, Process, and Output Relationships 212
Addressing the Issue 218
Future Tasks and Directions 223
References 225

8 Flight Training and Simulation
Paul W. Caro

Introduction 229
Flight Simulator Design and Use 229
Development and Delivery of Flight Instruction 248
Current Trends in Flight Training 256
References 260

9 Human Error in Aviation Operations
David C. Nagel

Introduction 263
Methods of Studying Error 267
A Model of Error 271
Information Acquisition and Processing Errors 274
Errors in Deciding 286
Action Errors 293
Concluding Thoughts 298
References 301

10 Aircrew Fatigue and Circadian Rhythmicity
R. Curtis Graeber

Introduction 305
Nature of the Problem: The Limits of Endurance 307
Short-Haul Operational Studies 316

Long-Haul Operational Studies 327
Is Automation the Answer? 337
References 341

THREE Human Factors in Aircraft Design

11 Pilot Control
Sheldon Baron

Introduction 347
Nature of the Aircraft Control Problem 348
Human Control 358
Modeling the Pilot–Vehicle System 367
Changes in the Flight Control Problem 376
Concluding Remarks 382
References 383

12 Aviation Displays
Alan F. Stokes and Christopher D. Wickens

Introduction 387
Flight Path Displays 388
Navigational Displays 392
Display Organization and Configuration: The Visual Overload Problem 395
Auditory Displays 403
Color Displays 409
Display Automation: Decluttering and Configuration 420
References 422

13 Cockpit Automation
Earl L. Wiener

Introduction 433
Incidents and Accidents 438
Why Automate? 444
Current Issues in Automation 451
Looking Ahead: Philosophies of Automation 455
Conclusion 458
References 459

14 Software Interfaces for Aviation Systems
Robert C. Williges, Beverly H. Williges, and Robert G. Fainter

Introduction 463
Human Factors Software Design Issues 465
Software Interface Design Process 476
Conclusions 490
References 491

15 Cockpit–Crew Systems Design and Integration
George A. Sexton

Introduction 495
New Technologies Revolutionize Design 508
Crew Systems Design Methodology 512
Crew Systems Integration 518
Workload 521
Conclusions 523
References 525

FOUR Vehicles and Systems

16 Airline Pilots' Perspective

Richard B. Stone and Gary L. Babcock

Cockpit Design 529
FAA Work Rules for Pilots 532
Safety and Health Issues 536
Environment 539
General Airline Pilot Profile 543
The Pilot and the Airline 545
Current Trends in Error Prevention 547
Current Trends in Training 550
The Future 553
Summary 559
References 559

17 General Aviation

Malcolm L. Ritchie

Introduction 561
Human Performance Variables in General Aviation 566
Primary Flight Tasks of the GA Pilot 572
Managing the GA Aircraft Systems 575
GA Navigation Tasks 579
GA Air Traffic Control Tasks 581
Potential GA Pilot Task Improvements through Technology 583
Conclusions 587
References 588

18 Helicopter Human Factors
Sandra G. Hart

Introduction 591
Typical Helicopter Flight Tasks 595
Cockpit Environment 600
Helicopter Controls 606
Information Requirements 608
Advanced Technology Solutions 615
Concluding Remarks 631
References 633

19 Air Traffic Control
V. David Hopkin

Introduction 639
Air Traffic Control System Operations 642
The Role of the Controller 647
Selection and Training 648
Human Error 649
Workspace Design 651
Stress and Boredom 654
Measurement 656
The Impact of Automation 659
Conclusion 661
References 662

Notes on Contributors 665
