

# Structure and Performance of Cements

Second edition

Edited by

J. Bensted and  
P. Barnes

London and New York

---

# Contents

<i>List of contributors</i>	xii
<i>Preface</i>	xvi
<i>Notation</i>	xviii
1 Cement manufacture	1
<i>Wiesław Kurdowski</i>	
1.1 Introduction	1
1.2 Raw material preparation	2
1.3 Raw material crushing	2
1.4 Raw material grinding	3
1.5 Classifiers	4
1.6 Homogenization	5
1.7 Clinker burning	7
1.8 Coolers	13
1.9 Cement grinding	16
1.10 Automation	18
1.11 Environmental protection	20
1.12 Acknowledgements	23
1.13 References	23
2 Composition of cement phases	25
<i>Herbert Pöllman</i>	
2.1 Introduction	25
2.2 Simple oxides, elements and their potential role in cement chemistry	27
2.3 Calcium silicates	27
2.4 Aluminium silicates, calcium aluminium silicates, their properties and occurrence in cements	34
2.5 Calcium aluminates	35
2.6 Calcium aluminium ferrites	38
2.7 Influence of minor components (alone or in combinations) – alkalies, MgO, SO <sub>3</sub> , phosphates, fluorides, borates, chlorine, titanium, heavy metals	41
2.8 Increased MgO content	41
2.9 Sulphate-containing phases	41

## Contents

---

2.10	Chlorine-containing phases	41
2.11	Phosphate in cement	44
2.12	Heavy metals in cement	46
2.13	Elements used as fluxes (boron and fluorine)	46
2.14	Quantification of cementitious materials by Rietveld method	50
2.15	Acknowledgements	51
2.16	References	51
3	Hydration of Portland cement	57
	<i>E. M. Gartner, J. F. Young, D. A. Damidot and I. Jawed</i>	
3.1	Introduction	57
3.2	Hydration of tricalcium silicate	57
3.3	Hydration of dicalcium silicate	78
3.4	Hydration of tricalcium aluminate	81
3.5	Hydration of the ferrite phase	87
3.6	Hydration of Portland cement	89
3.7	Microstructure of hardened paste	100
3.8	Appendix – Glossary of terms	108
3.9	References	108
4	Calcium aluminate cements	114
	<i>John Bensted</i>	
4.1	Introduction	114
4.2	Manufacture	115
4.3	Phase composition	116
4.4	Physical properties	117
4.5	Hydration	118
4.6	Admixtures	123
4.7	Blends with other materials	124
4.8	Low-temperature applications	126
4.9	High-temperature applications	126
4.10	Hydrophobic applications	127
4.11	Durability	127
4.12	Safe usage of CACs	130
4.13	Concrete society report in the UK on CACs	133
4.14	CAC and structures	134
4.15	Further comments on sulphate resistance	134
4.16	Thermal analysis methods for assessing CAC conversion	136
4.17	Further comments	136
4.18	Conclusion	137
4.19	Acknowledgements	138
4.20	References	138
5	Properties of concrete with mineral and chemical admixtures	140
	<i>S. Chandra</i>	
5.1	Introduction	140
5.2	Binders	141

5.3	Interrelation of cement properties to concrete	142
5.4	Hydration of cementitious materials	143
5.5	Superplasticizers	150
5.6	Interfacial transition zones (ITZ)	156
5.7	Durability properties	163
5.8	Engineering properties	168
5.9	Need for development of long-term test methods	178
5.10	Concluding remarks	179
5.11	Acknowledgements	180
5.12	References	180
6	Special cements	186
	<i>A. K. Chatterjee</i>	
6.1	Introduction	186
6.2	Prior reviews and past definitions	186
6.3	Drivers for special cement development	188
6.4	Construction cements with enhanced durability potential	189
6.5	Cement formulations with improved engineering properties	206
6.6	Cementitious products for environmental benefits	218
6.7	Simultaneous production of energy and cement	224
6.8	Cements with high energy conservation potential	226
6.9	Miscellaneous hydraulic and chemical cements	231
6.10	Conclusion	232
6.11	References	233
7	Developments with oilwell cements	237
	<i>John Bensted</i>	
7.1	Introduction	237
7.2	ISO classes and grades	238
7.3	Relevant ISO standards	239
7.4	Brief comments on the ISO cementing standards	239
7.5	Effects of different conditions	240
7.6	Some other interesting phenomena with Class G and H cements	241
7.7	Cementing in hostile environments	242
7.8	Cements for some given well types	244
7.9	Alternatives to standard Class G and H cements	246
7.10	Conclusion	251
7.11	Acknowledgements	251
7.12	References	251
8	Gypsum in cements	253
	<i>John Bensted</i>	
8.1	Introduction	253
8.2	The calcium sulphate–water system	253
8.3	The role of gypsum in set regulation of Portland cement-based systems	255
8.4	Gypsum quality	257

## Contents

---

8.5	By-product gypsums	258
8.6	Flash set	260
8.7	False set	260
8.8	Air set	261
8.9	Portland cement–calcium aluminate cement compositions	262
8.10	Calcium sulphoaluminate cements	262
8.11	Conclusion	263
8.12	References	263
9	Alkali–silica reaction in concrete	265
	<i>D. W. Hobbs</i>	
9.1	Introduction	265
9.2	The reaction	265
9.3	Mechanism of expansion	266
9.4	Concretes affected	267
9.5	Visual and internal cracking induced by ASR	267
9.6	Pessimism behaviour	269
9.7	Sources of alkali	270
9.8	Reactive silica	271
9.9	Diagnosis of ASR as the cause of visual cracking	272
9.10	Factors influencing expansion	273
9.11	Concluding remarks	280
9.12	References	280
10	Delayed ettringite formation	282
	<i>C. Famy, K. L. Scrivener and H. F. W. Taylor</i>	
10.1	Introduction	282
10.2	DEF in field concretes	282
10.3	Coarse microstructure of materials damaged by DEF	283
10.4	Macroscopic properties associated with DEF	283
10.5	Effect of cement composition	284
10.6	Cement hydration at 70–100°C	284
10.7	Chemistry of changes after cooling to ambient temperatures	286
10.8	Paste microstructure in materials cured at elevated temperature	287
10.9	Expansion	288
10.10	Conclusions	292
10.11	Acknowledgements	293
10.12	References	293
11	Chloride corrosion in cementitious system	295
	<i>Wiesław Kurdowski</i>	
11.1	Introduction	295
11.2	Chloride ions diffusion in cement paste	295
11.3	Binding capacity of chloride ions in cement paste	297
11.4	Factors influencing the diffusion of chloride ions in the cement paste	298
11.5	Mechanism of cement paste destruction in the chloride medium	300

11.6 Chloride-induced corrosion of reinforcement in concrete	306
11.7 References	308
<b>12 Blastfurnace cements</b>	<b>310</b>
<i>E. Lang</i>	
12.1 History	310
12.2 Slag composition and reactivity	310
12.3 Grindability	313
12.4 Blastfurnace cement characterization	314
12.5 Durability	318
12.6 References	323
<b>13 Properties and applications of natural pozzolanas</b>	<b>326</b>
<i>F. Massazza</i>	
13.1 Introduction	326
13.2 Classification of natural pozzolanas	326
13.3 Pozzolana–lime mixes	328
13.4 Pozzolana-containing cements	335
13.5 Conclusions	348
13.6 References	348
<b>14 Pulverized fuel ash as a cement extender</b>	<b>353</b>
<i>Karen Luke</i>	
14.1 Introduction	353
14.2 PFA formation	354
14.3 Characteristics of PFA	355
14.4 Role of PFA on performance of extended systems	357
14.5 References	369
<b>15 Metakaolin as a pozzolanic addition to concrete</b>	<b>372</b>
<i>Tom R. Jones</i>	
15.1 Introduction	372
15.2 Structure of metakaolin (mk)	373
15.3 Pozzolanic reactions of mk	374
15.4 Effect of mk on the basic properties of PC concrete	378
15.5 Effect of mk on the properties of uncured concrete	381
15.6 Effect of mk on the properties of hardened concrete	385
15.7 Durability of mk concrete	389
15.8 Metakaolin in engineering concrete	393
15.9 Acknowledgements	395
15.10 References	395
<b>16 Condensed silica fume as a cement extender</b>	<b>399</b>
<i>H. Justnes</i>	
16.1 Introduction	399
16.2 Physical effects	399
16.3 Chemical effects	401

## Contents

---

16.4	Conclusions	407
16.5	References	407
17	Cement-based composite micro-structures <i>Stephen P. Bailey, David O'Connor, Sally L. Colston, Paul Barnes, Herbert Freimuth and Wolfgang Ehrfeld</i>	409
17.1	Introduction	409
17.2	Cement-composite development	411
17.3	Micro-mould design	412
17.4	Mould fabrication	412
17.5	MSCCD applications	413
17.6	MSCCD production	415
17.7	Quality of MSCCD features	416
17.8	Conclusions	419
17.9	Acknowledgements	419
17.10	References	419
18	X-ray powder diffraction analysis of cements <i>J. C. Taylor, L. P. Aldridge, C. E. Matulis and I. Hinczak</i>	420
18.1	Introduction	420
18.2	X-ray diffraction from cement	421
18.3	Qualitative analysis of cements	422
18.4	The method of X-ray diffraction	423
18.5	Physical factors affecting XRD quantitative analysis	425
18.6	Choice of radiation in cement XRD studies	427
18.7	Amorphous (non-diffracting) content	427
18.8	Background intensity	429
18.9	Rietveld refinement of OPC XRD patterns	429
18.10	Refinement strategy for Rietveld XRD assays of cements	432
18.11	Errors in Rietveld quantifications	434
18.12	Crystal structure analysis of Portland cement phases by the Rietveld method	434
18.13	Quantitative analysis of hydrating phases	435
18.14	Recent Rietveld studies of real cements	436
18.15	Conclusions	437
18.16	References	437
19	Electrical monitoring methods in cement science <i>W. J. McCarter, G. Starrs and T. M. Chrisp</i>	442
19.1	Introduction	442
19.2	Impedance formalisms	442
19.3	Application of electrical measurements	446
19.4	Concluding remarks	453
19.5	Acknowledgements	454
19.6	References	454

20	Nuclear magnetic resonance spectroscopy and magnetic resonance imaging of cements and cement-based materials	457
	<i>Jørgen Skibsted, Christopher Hall and Hans J. Jakobsen</i>	
20.1	Introduction	457
20.2	Solid-state NMR methods	458
20.3	Structure and bonding in cement minerals	462
20.4	Proton relaxation and pore structure	467
20.5	Other nuclei	469
20.6	Magnetic resonance imaging	469
20.7	References	472
21	The use of synchrotron sources in the study of cement materials	477
	<i>Paul Barnes, Sally L. Colston, A. C. Jupe, S. D. M. Jacques, M. Attfield, R. Pisula, S. Morgan, C. Hall, P. Livesey and S. Lunt</i>	
21.1	Introduction	477
21.2	The synchrotron	477
21.3	High quality/resolution powder diffraction	479
21.4	Single crystal micro-diffraction	482
21.5	Energy-dispersive powder diffraction	483
21.6	Extended X-ray absorption fine structure	494
21.7	X-ray microscopy	495
21.8	Tomographic energy-dispersive diffraction imaging	495
21.9	Conclusions	498
21.10	Acknowledgements	498
21.11	References	498
22	Electron microscopy of cements	500
	<i>I. G. Richardson</i>	
22.1	General introduction	500
22.2	Historical context	500
22.3	Electron microscopy	511
22.4	Transmission electron microscopy of cement	511
22.5	High resolution transmission electron microscopy of cement hydrate phases	520
22.6	Scanning electron microscopy of cement	523
22.7	Low-temperature and environmental electron microscopy of cement	532
22.8	Analytical electron microscopy using X-rays	533
22.9	Analytical transmission electron microscopy (TEM-EDX/EELS)	534
22.10	Electron microscopy of cement	540
22.11	References	542
	<i>Index</i>	557
