Wayne L. Myers · Ganapati P. Patil

Multivariate Methods of Representing Relations in R for Prioritization Purposes

Selective Scaling, Comparative Clustering, Collective Criteria and Sequenced Sets

Springer

Contents

1 Motivation and Computation 1
Plan of Presentation 2
Data Domain 4
Architecture of R 6
References 9

Part I Synergistic Scalings, Contingent Clustering and Distance Domains

2 Suites of Scalings 13
Standardized Scaling as Universal Units 17
Relative Rank Rescaling 19
Representing Relations Among Multiple Measures 22
References 29

3 Rotational Rescaling and Disposable Dimensions 31
Principal Component Composites 32
References 42

4 Comparative Clustering for Contingent Collectives 43
Disparities and Dendrograms 44
Cutting Clusters 44
Comparing Cluster Collectives 49
Exploring Exchange 52
Tagging Trees 59
Contingent Cartography 61
Computational Considerations and Characterizing Collectives 61
References 62

5 Distance Domains, Skeletal Structures, and Representative Ranks 63
Contingent Coordinates in Distance Domains 64
Networks of Neighbors, Simple String Structure, and Satellite Structure 67
Function 5.1: NaborNet Function for Making Networks of Neighboring Centroids 69
k Nearest Neighbors 76
Function 5.2: Naboring Function for Determining *k* Nearest Neighbors 77
Skeletal Subset as Comparative Core 79
Sequence Scaling and Representative Ranks 83
Function 5.3: PlacRank Function for Converting a Data Frame to Place Ranks 83
Representative Ranks 87
Function 5.4: GroupRnk Function for Compiling Key Ranks of Collectives (Minimum, First Quartile, Median, Third Quartile, and Maximum) from Case-Level Rankings 88
References 90

Part II Precedence and Progressive Prioritization

6 Ascribed Advantage, Subordination Schematic, and ORDIT Ordering 93
Ascribed Advantage, Subordinate Status, and Indefinite Instances 93
Subordination Schematic 94
Ordering Dually in Triangles 95
Product-Order Rating Regime 95
Function 6.1: ProdOrdr Function for ORDIT Ordering and Salient Scaling According to Product-Order Protocols 97
References 100

7 Precedence Plots, Coordinated Criteria, and Rank Relations 101
Precedence Plots 101
Function 7.1: TrpzTrpl Function for Precedence Plots Based on Trapezoidal Triplet 101
Indicator Integration and Condensation 105
Rank Range Relations 110
Function 7.2: RankRods Function for Plotting Augmented Rank Range Rods 114
References 115

8 Case Comparisons and Precedence Pools 117
Conventional Criteria 117
Representative Ranks as Case Criteria 128
Function 8.1: CasRnkos Function for Determining Rank Order Statistics of Cases 129
Partial Precedence Pools 140
Function 8.2: SubSteps Function for Determining Partial Pools of SS Levels 142
Function 8.3: Agrg8Adv Function for Determining Partial Pools of AA Levels 143
Function 8.4: PrtlPool Function for Determining ORDITs of Partial Pools 144
Function 8.5: PoolPlot Facility for Generating Precedence Plots for Partial Pools 147
References 152

9 Distal Data and Indicator Interactions 153
Distal Data and End Extensions 153
Function 9.1: Xtremity Function Facility for Determining Distal Data from Ranks 155
Indicator Interaction and Median (Mis)Matching 159
Function 9.2: MdnMsMch Function for Determining Difference between Indicator Rank and Median of Ranks for other Indicators 161
Conditional Complement 163
Reference 163

10 Landscape Linkage for Prioritizing Proximate Patches 165
Function 10.1: Salient Function for Order of Salient Scaling Based on Place-Ranks 168
Function 10.2: Primary Function for Setting Up Frame of Zones at Initial Stage 169
Function 10.3: Fringe Function for Bordering Zones 171
Function 10.4: Annex Function for Incorporating Zones of the Current Expansion 172
Contiguous Complement 174
Function 10.5: Complmnt Function for Assigning Complementary Ratings in Progressive Expansion of Selections 178
Reference 180

11 Constellations of Criteria 181
Data Format 182
Ecological Value Indicators 182
Ecological Sensitivity Indicators 183
Human Pressure Indicators 185
Salient Scaling 186
Reference 192

12 Severity Setting for Human Health 193
Data Files 194
Indicator Screening 195
Salient Scaling 196
First Quartile of Severity 200
Precedence 202

Part III Transformation Techniques and Virtual Variates

13 Matrix Methods for Multiple Measures 209
Linear Transformation and Hybridization 211
Back Transformation by Inverse 212
Transpose, Symmetric, and Orthogonal 213
Vector Magnitude, Length, or Norm and Euclidean Distance 214
Statistics of Transformation 216
Invariant Vectors, Eigenvalues, Modal Matrix, and Spectral Matrix 217
Decorrelation of Standardized Variates 218
Decorrelation of Original Variates 223
Linear Filter 228
References 229

14 Segregating Sets Along Directions of Discrimination 231
Within-Groups and Collective Variation 233
Between-Groups Variation 234
Formulation and Computation 235
Canonical Variates 238
Mahalanobis Generalized Distance 241
Special Spaces 242
References 243

Appendix 1 Printout of BAMBI.txt File of Pennsylvania Hexagon Data 245

Appendix 2 R~Workshop I—Getting Started with R 251

Appendix 3 R~Workshop II—Data Exploration with R 257

Appendix 4 R~Workshop III—Data Relations 265

Appendix 5 R~Workshop IV—Analysis of Variance and Covariance 275

Appendix 6 Glossary of Names Designating Data (R Objects) 285
