

Contents

Preface	ix
1. Current Approaches in Computer-Aided Molecular Design Bruce R. Gelin	1
PHARMACEUTICALS	
2. Molecular Modeling and Quantitative Structure–Activity Relationship Studies in Pursuit of Highly Potent Substituted Octanoamide Angiotensin II Receptor Antagonists Donald B. Boyd, Alan D. Palkowitz, K. Jeff Thrasher, Kenneth L. Hauser, Celia A. Whitesitt, Jon K. Reel, Richard L. Simon, William Pfeifer, Sherryl L. Lifer, Kumiko Takeuchi, Vasu Vasudevan, Aaron D. Kossoy, Jack B. Deeter, Mitchell I. Steinberg, Karen M. Zimmerman, Sally A. Wiest, and Winston S. Marshall	14
3. Structure-Based Design of Human Immunodeficiency Virus-1 Protease Inhibitors: Correlating Calculated Energy with Activity M. Katharine Holloway and Jenny M. Wai	36
4. From Maps to Models: A Concerted Computational Approach to Analysis of the Structure–Activity Relationships of Amiloride Analogues Carol A. Venanzi, Ronald A. Bueno, William J. Skawinski, Thomas J. Busanic, Thomas J. Venanzi, Randy J. Zauhar, and Victor B. Luzhkov	51
5. De Novo Design: Ligand Construction and Prediction of Affinity Tudor I. Oprea, Chris M. W. Ho, and Garland R. Marshall	64
6. De Novo Design of Highly Diverse Structures Complementary to Enzyme Binding Sites: Application to Thermolysin Regine S. Bohacek and Colin McMartin	82

7. Computer-Aided Design of New Drugs Based on Retrometabolic Concepts	98
Nicholas Bodor and Ming-Ju Huang	
8. Molecular Mechanics and Dynamics Studies on Amide-Modified Backbones in Antisense Oligodeoxynucleotides	114
R. M. Wolf, V. Fritsch, A. De Mesmaeker, J. Lebreton, and A. Waldner	
9. Simulations of Drug Diffusion in Biomembranes	127
Terry R. Stouch, Howard E. Alper, and Donna Bassolino	
10. Genetic Algorithm Based Method To Design a Primary Screen for Antirhinovirus Agents	139
E. P. Jaeger, D. C. Pevear, P. J. Felock, G. R. Russo, and A. M. Treasurywala	

AGROCHEMICALS

11. Semiempirical Quantum Chemical Probes of the Mechanism of Chorismate Mutase	158
Stephen B. Bowlus	
12. Rational Design of Novel Ergosterol Biosynthesis Inhibitor Fungicides	171
Charles H. Reynolds and Steven H. Shaber	
13. Design and Synthesis of 5,6-Dihydro-4H-1,3,4-oxadiazines as Potential Octopaminergic Pesticides	183
Mark A. Dekeyser, W. Ashley Harrison, Paul T. McDonald, G. W. Angle, Jr., Saad M. M. Ismail, and Roger G. H. Downer	
14. Insect Aggregation Pheromone Response Synergized by "Host-Type" Volatiles: Molecular Modeling Evidence for Close Proximity Binding of Pheromone and Coattractant in <i>Carpophilushemipterus</i> (<i>L.</i>) (<i>Coleoptera: Nitidulidae</i>)	197
Richard J. Petroski and Roy Vaz	
15. Predicting Activity of Protoporphyrinogen Oxidase Inhibitors by Computer-Aided Molecular Modeling	211
Krishna N. Reddy, Ujjana B. Nandihalli, Hee Jae Lee, Mary V. Duke, and Stephen O. Duke	

16. Experimental Design in Organic Synthesis	225
Lawrence H. Brannigan, Mark V. Grieshaber, and Dora M. Schnur	
17. Use of Predictive Toxicology in the Design of New Chemicals	236
Vijay K. Gombar and Kurt Enslein	
18. Comparison of In Vivo and In Vitro Toxicity Tests from Co-inertia Analysis.....	250
James Devillers and Daniel Chessel	
19. Combined Use of Linear and Nonlinear Multivariate Analyses in Structure–Activity Relationship Studies: Application to Chemoreception	267
Daniel Domine, James Devillers, Maurice Chastrette, and Jean-Christophe Doré	
20. Comparative Quantitative Structure–Activity Relationship: Insect Versus Vertebrate Cholinesterase.....	281
Corwin Hansch	
21. Effect of Tautomeric Equilibria on Hydrophobicity as Measured by Partition Coefficients.....	292
Albert J. Leo	

MATERIALS

22. Structural Analysis of Carbyne Network Polymers	304
Scott A. Best, Patricia A. Bianconi, and Kenneth M. Merz, Jr.	
23. Computer Simulation of Polyelectrolyte Adsorption on Mineral Surfaces	316
Susan Fitzwater	
24. Simulating the Behavior of Organic Molecules in Zeolites.....	326
C. M. Freeman, D. W. Lewis, T. V. Harris, A. K. Cheetham, N. J. Henson, P. A. Cox, A. M. Gorman, S. M. Levine, J. M. Newsam, E. Hernandez, and C. R. A. Catlow	

25. Valence Bond Charge Transfer Theory for Predicting Nonlinear Optical Properties of Organic Materials.....	341
William A. Goddard III, Daqi Lu, Guanhua Chen, and Joe W. Perry	
26. Theoretical Study of the Nitridding Process on Cr(100), Fe(100), and Ni(100) Surfaces	359
Hansong Cheng, David B. Reiser, Paul M. Mathias, Kenneth Baumert, and Sheldon W. Dean, Jr.	
27. Computational Analysis of Azine-<i>N</i>-oxides as Energetic Materials.....	378
James P. Ritchie	
28. Genetic Algorithmic Approach for Computer-Aided Molecular Design	396
Venkat Venkatasubramanian, King Chan, and James M. Caruthers	
Author Index.....	415
Affiliation Index	416
Subject Index.....	416
