# Mechanisms of Metallocenter Assembly

*EDITED BY*

*Robert P. Hausinger*

*Gunther L. Eichhorn*

*Luigi G. Marzilli*

---

# Contents

Contributors xv

## **1. General Principles and Mechanisms of Metallocenter Assembly 1**

*Robert P. Hausinger*

- 1.1. Introduction 1
- 1.2. Metallocenter Assembly Requiring No Accessory Proteins 2
- 1.3. Creation of Metal Ion Binding Sites by Posttranslational Modification 5
- 1.4. Synthesis of Metal Cofactors 6
- 1.5. Electron Transfer-Dependent Assembly of Metallocenters 8
- 1.6. Metallocenter Assembly-Specific Chaperone Proteins 9
- 1.7. Metal-Donor Auxiliary Proteins 11
- 1.8. Covalent Attachment of Metallocenters 12
- 1.9. Summary and Perspective 14
- References 15

## **2. In Vitro Metal Ion Incorporation into Nonheme Diiron Proteins: Hemerythrin, Myohemerythrin, and Rubrerythrin 19**

*Donald M. Kurtz, Jr.*

- 2.1. Introduction 19
- 2.2. Hemerythrin and Myohemerythrin 20

- 2.3. Rubrerythrin 31
- 2.4. Perspective and Future Directions 35
- References 38

### **3. Generation of Calcium-Binding Sites in Proteins by Formation of $\gamma$ -Carboxyglutamic Acid and $\beta$ -Hydroxyaspartic Acid/ $\beta$ -Hydroxyasparagine 41**

*Torbjörn Drakenberg, Maria Sunnerhagen, and Johan Stenflo*

- 3.1. Introduction 41
- 3.2. Blood Coagulation 43
- 3.3. Modular Structure of  $\gamma$ -Carboxyglutamic Acid (Gla) and  $\beta$ -Hydroxyaspartic Acid/ $\beta$ -Hydroxyasparagine (Hya/Hyn)-Containing Coagulation Factors 45
- 3.4. Gla-Containing Modules 46
- 3.5. EGF-Like Modules Containing Hya/Hyn 57
- 3.6. Other Calcium-Binding Sites in Vitamin K-Dependent Coagulation Factors 68
- 3.7. Calcium-Binding to Gla and Hya/Hyn-Containing Modules in Proteins not Involved in Blood Coagulation 68
- 3.8. Summary 69
- References 70

### **4. Ferrochelatase 77**

*Harry A. Dailey*

- 4.1. Introduction 77
- 4.2. Cloning and Expression of Ferrochelatase 80
- 4.3. Characterized Mutations of Ferrochelatase 83
- 4.4. Kinetic Properties 84
- 4.5. Iron-Sulfur Cluster of Mammalian Ferrochelatase 92
- 4.6. Active Site Model for Ferrochelatase 93
- 4.7. Potential Protein-Protein Interactions 94
- References 95

### **5. Cobalt Insertion During Coenzyme B<sub>12</sub> Biosynthesis 99**

*Francis Blanche, Béatrice Cameron, Michel Couder, Joel Crouzet, Laurent Debussche, and Denis Thibaut*

- 5.1. Introduction 99
- 5.2. Timing of Cobalt Insertion—Historical Perspective 99

- 5.3. Cobalt Insertion in *Pseudomonas denitrificans* 102
- 5.4. Coenzyme Formation 106
- 5.5. Genetics of the Insertion of Cobalt 107
- 5.6. Cobalt Insertion in Other Microorganisms 108
- References 109

## **6. Developments in the Analysis of Nitrogenase FeMo-Cofactor Biosynthesis**

*Steven W. Muchmore, Richard F. Jack, and Dennis R. Dean*

- 6.1. Introduction 111
- 6.2. Biochemical–Genetic Analysis of Nitrogenase Metallocluster Assembly: A Brief Historical Perspective 113
- 6.3. Biosynthesis of FeMo-Cofactor: A General Overview 115
- 6.4. The NifEN Complex: A Molecular Scaffold for Metallocluster Assembly? 116
- 6.5. Homocitrate and the Involvement of NifV and NifQ, and the Possible Involvement of NifW and NifZ, in FeMo-Cofactor Assembly 122
- 6.6. Fe Protein and MgATP Are Required for the Synthesis of FeMo-Cofactor and Its Insertion into the Apo-MoFe Protein 123
- 6.7. The Involvement of a Molecular Prop in FeMo-Cofactor Insertion 125
- 6.8. NifB: A Molecular Scaffold for Formation of an FeMo-Cofactor Precursor–NifB-Cofactor? 126
- 6.9. Mobilization of the S and Fe Required for FeMo-Cofactor Formation 127
- 6.10. Summary and Comments 129
- References 130

## **7. FeS Cluster Assembly by Rhodanese: A Regulated Process? 135**

*Marguerite Volini*

- 7.1. Introduction 135
- 7.2. The Sulfurtransferases 136
- 7.3. Enzyme-Catalyzed Incorporation of Sulfur into Iron–Sulfur Proteins 137
- 7.4. Rhodanese Functions 139
- 7.5. The Rhodanese of Bovine Liver Mitochondria 140
- 7.6. The Accessible Rhodanese of *E. coli* 145
- 7.7. Summary and Conclusions 147
- References 148

**8. Nickel Incorporation into Urease 151***Mary Beth C. Moncrief and Robert P. Hausinger*

- 8.1. Introduction 151
- 8.2. Urease Metallocenter Assembly 155
- 8.3. Summary 167
- References 168

**9. Nickel Incorporation into Hydrogenases 173***Thomas Maier and August Böck*

- 9.1. Introduction 173
- 9.2. Biochemistry of Hydrogenases 174
- 9.3. Genetics of Nickel-Containing Hydrogenases 177
- 9.4. Nickel Incorporation and Maturation of Hydrogenases 181
- 9.5. Conclusions 187
- References 188

**10. Metal-Center Assembly of the Bacterial Multicopper Enzyme, Nitrous Oxide Reductase 193***Walter G. Zumft and Peter M. H. Kroneck*

- 10.1. Introduction 193
- 10.2. Genetics of N<sub>2</sub>O Reductase 195
- 10.3. Properties of N<sub>2</sub>O Reductase 198
- 10.4. The Assembly Process 208
- 10.5. Conclusions 215
- References 216

**11. Role of MelC1 as a Chaperone for *Streptomyces* Tyrosinase Copper Assembly 223***Yan-Hwa Wu Lee*

- 11.1. Introduction 223
- 11.2. *Streptomyces* Tyrosinase 224
- 11.3. In Vitro Reconstitution of Apotyrosinase by Copper Ion 227
- 11.4. In Vivo Requirement of Accessory Protein MelC1 for Metallocenter Assembly in Tyrosinase of *Streptomyces* 228
- 11.5. Summary and Perspective 231
- References 232

## **12. Role of Metallothionein in Intracellular Metal Metabolism and in Activation of Copper- and Zinc-Dependent Proteins 235**

*Marius Brouwer*

- 12.1. Introduction 235
- 12.2. Metallothionein Structure 238
- 12.3. Metal-Binding Properties 239
- 12.4. Metal Transfer from Metallothionein to Apometalloproteins  
In Vitro 251
- 12.5. Role of Metallothionein in Intracellular Trafficking of Copper  
and Zinc In Vivo 254
- 12.6. Concluding Remarks 255  
References 256
