

Douglas E. Rawlings (Ed.)

# Biomining:

Theory, Microbes and Industrial Processes

Springer

# CONTENTS

## Section I — Overview

<b>1. Mining Biotechnology:</b>	
<b>Research to Commercial Development and Beyond .....</b>	<b>3</b>
<i>Corale L. Brierley</i>	
Introduction .....	3
Industrial Applications of Bioleaching/Biooxidation .....	3
Stirred-Tank Biooxidation .....	4
Bioheaps and Copper Dump Leaching .....	8
In Situ Bioleaching .....	9
Applications of Bioremediation in the Mining	
Environment .....	10
R&D Leading to Today's Commercial Operations .....	11
New Developments .....	13
Summary .....	16

## Section II — Industrial Processes

<b>2. Bioleaching of Copper .....</b>	<b>21</b>
<i>Henry A. Schnell</i>	
Introduction .....	21
Leaching Definitions .....	22
Copper Mineralogy .....	22
Physico-Chemical Leaching Variables .....	23
Bacterial Leaching Variables .....	26
Nutrients .....	27
Heap Operating Variables .....	29
Leach Solution Processing .....	32
Environmental Considerations .....	36
Commercial Installations .....	36
Conclusions .....	42
<b>3. The BIOX® Process for Biooxidation of Gold-Bearing</b>	
<b>Ores or Concentrates .....</b>	<b>45</b>
<i>David W. Dew, Ellen N. Lawson and Jennifer L. Broadhurst</i>	
Introduction .....	45
The BIOX® Process Flowsheet and Plant	
Operating Practice .....	46
The BIOX® Bacterial Culture .....	54
Engineering Design and Process Requirements .....	58
Treatment and Disposal of BIOX® Effluent Streams .....	70
Conclusion .....	77

<b>4. The Design and Operating Practice of Bacterial Oxidation Plant Using Moderate Thermophiles (The BacTech Process) .....</b>	<b>81</b>
<i>Paul C. Miller</i>	
Introduction .....	81
Current Reasons for Considering Bacterial Leaching .....	82
Oxidation of Refractory Gold Concentrates—	
Process Flowsheet and Economics .....	83
Aspects of Reactor Design and Operation .....	87
Integration of Bacterial Oxidation with	
Other Unit Operations .....	97
Trouble Shooting and Philosophy of Operation .....	99
Future Applications and Conclusions .....	100
<b>5. Heap Leaching of Gold-Bearing Deposits: Theory and Operational Description .....</b>	<b>103</b>
<i>James A. Brierley</i>	
Introduction .....	103
Laboratory Scale Testing and Development .....	104
Concepts and Theory of the Biooxidation-Heap Process ...	104
Microbiology .....	106
Applications .....	107
Summary .....	112
<b>6. Biooxidation of Refractory Gold Ores (The Geobiotics Process) .....</b>	<b>117</b>
<i>James L. Whitlock</i>	
Introduction .....	117
Biooxidation of Refractory Gold Ores .....	117
The Geobiotics Process .....	119
Process Design Overview .....	119
Laboratory and Pilot Test Results .....	122
Costs .....	126
Conclusions .....	126
<b>7. Technical Potential for Bioleaching and Biobeneficiation of Ores to Recover Base Metals (Other than Iron or Copper), Platinum-Group Metals and Silver .....</b>	<b>129</b>
<i>Henry L. Ehrlich</i>	
Introduction .....	129
Leaching with Autotrophic and Mixotrophic Bacteria .....	130
Leaching with Heterotrophic Bacteria .....	138
Conclusion .....	145

### Section III — Process Fundamentals

<b>8. Recent Developments in Modeling the Kinetics of Bioleaching .....</b>	<b>153</b>
<i>Geoffrey S. Hansford</i>	
Introduction .....	153
Bacterial Ferrous Iron Oxidation .....	153
Kinetics Models for Bioleaching .....	160
Conclusions .....	170
<b>9. Physical Chemistry of Bacterial Leaching .....</b>	<b>177</b>
<i>Frank K. Crundwell</i>	
Introduction .....	177
The Surface Chemistry of Bacterial Attachment to Mineral Surfaces .....	178
Electrochemistry of Mineral Dissolution and Bacterial Leaching .....	186
Applications of Electrochemical Mechanism of Leaching .....	190
Incorporation of the Electrochemical Kinetics into a Model of Bacterial Leaching of Sphalerite .....	195
Conclusions .....	198
<b>10. Optimization of Biooxidation Heaps .....</b>	<b>201</b>
<i>A. Ian M. Ritchie</i>	
Introduction .....	201
Basics .....	202
The Intrinsic Oxidation Rate .....	206
Mathematical Simulation of Heap Performance .....	210
Optimizing the Performance of an Open Based Heap .....	212
Monitoring the Performance of a Biooxidation Heap .....	219
Outstanding Issues .....	222

### Section IV — Leaching Microorganisms

<b>11. Mesophilic, Autotrophic Bioleaching Bacteria: Description, Physiology and Role .....</b>	<b>229</b>
<i>Douglas E. Rawlings</i>	
Introduction to Microorganisms .....	229
Taxonomic Description of the Mesophilic Bioleaching Bacteria .....	230
Phylogeny .....	231
Nutrition and Energy .....	232
Mineral Oxidizing Ability .....	237
The Role of the Mesophilic Obligate Acidophiles in Mineral Bioleaching .....	239
Other Physiological Characteristics .....	239
Summary .....	241

<b>12. Thermophiles and Bioleaching .....</b>	<b>247</b>
<i>Paul R. Norris</i>	
Introduction .....	247
The Microorganisms .....	248
Metabolism and Molecular Biology of Thermophiles .....	252
Mineral Sulfide Oxidation by Thermophiles .....	253
<b>13. Heterotrophic Acidophiles and Their Roles in the Bioleaching of Sulfide Minerals .....</b>	<b>259</b>
<i>D. Barrie Johnson and Francisco F. Roberto</i>	
Introduction .....	259
Biodiversity of Acidophilic Heterotrophic Prokaryotes .....	259
Ecology of Acidophilic Heterotrophic Prokaryotes .....	264
Molecular Biology of Acidophilic Heterotrophic Bacteria .....	270
Role of Acidophilic Heterotrophs in Mineral Dissolution ..	271
Conclusions .....	275
<b>14. Molecular Methods for the Identification and Enumeration of Bioleaching Microorganisms .....</b>	<b>281</b>
<i>Carlos A. Jerez</i>	
Introduction .....	281
Bioleaching Microorganisms .....	282
Some of the Classical Methods for the Determination of Biomining Microorganisms .....	282
Adherence of Microorganisms and Biofilm Formation .....	282
Immunological Methods .....	284
Methods Involving Nucleic Acids .....	289
Determination of Microorganisms In Situ .....	293
Conclusions .....	294
<b>Index .....</b>	<b>299</b>
