

Carolina Engelhard

**Assessing the Impact of Urban Drainage
Measures with Regard to the
Water Framework Directive**

TABLE OF CONTENTS

1	Introduction	1
1.1	EU Water Framework Directive.....	2
1.2	Impacts on receiving waters.....	2
1.3	Integrated system.....	3
1.4	Cost Effective Development of Urban Wastewater Systems for Water Framework Directive Compliance (CD4WC).....	5
1.5	Structure of the dissertation.....	6
1.6	Scientific context of the papers of this dissertation.....	9
1.6.1	PAPER I: Environmental impacts of urban snow management - The alpine case study Innsbruck.....	9
1.6.2	PAPER II: Local infiltration devices at parking sites - experimental assessment of temporal changes in hydraulic and contaminant removal capacity ..	9
1.6.3	PAPER III: Challenges in the implementation of the Water Framework Directive: case study of the alpine river Drau, Austria.....	10
1.6.4	PAPER IV: Risk analysis and impact assessment of urban stormwater-with emphasis on the EU – WFD.....	10
1.6.5	PAPER V: Intermittent impacts to receiving water bodies- review on approaches, indicators and limits.....	11
1.6.6	PAPER VI: Suitability of CSO performance indicators for compliance with ambient water quality targets.....	12
1.6.7	PAPER VII: Mitigation measures towards morphological alterations of rivers: The receiving water as part of the integrated wastewater system.....	12
1.6.8	PAPER VIII: Combined sewer system versus separate system - a comparison of ecological and economical performance indicators.....	13
2	Traffic Pollution - Consequences for Snow Management and Runoff Infiltration	14
2.1	Environmental impacts of urban snow management.....	14
2.2	Local infiltration devices at parking sites.....	15
3	Water Framework Directive	16
3.1	Introduction to the Water Framework Directive.....	16
3.1.1	The Combined Approach.....	16
3.1.2	Classification of Surface Waters.....	17
3.1.3	Surface Water Status.....	19
3.1.4	Priority Substances.....	20
3.2	Implementation of the Water Framework Directive in Austria.....	22
3.3	Pressures arising from the WFD to urban drainage system design and operation.....	25

4	Description of Ecological Status using Water Quality Parameters	26
4.1	The Good Ecological Status – the Case Study Drau	27
4.2	Comparison of Different Ambient Water Quality Standards for Long-term Impacts.....	28
4.3	Intermittent impacts to receiving water bodies.....	30
5	Indicators for the Assessment of Urban Drainage Measures.....	32
5.1	Receiving Water Indicators For Urban wet-weather Discharges	33
5.1.1	Receiving Water Indicators	33
5.1.2	Hydraulic Impact.....	34
5.1.3	Oxygen Depletion.....	37
5.1.4	Eutrophication	41
5.1.5	Acute Toxic Effects.....	41
5.1.6	Accumulation of Persistent Substances	43
5.2	CSO Performance Indicators.....	44
5.2.1	Number of Overflows per Year	44
5.2.2	Mean Annual Overflow Volume	45
5.2.3	Maximum Overflow Event Once per Year.....	45
5.2.4	CSO Efficiency.....	45
5.3	Correlation Analysis of Indicators for the CSO Performance with Receiving Water Indicators.....	46
6	Evaluation of Urban Drainage Measures	47
6.1	Mitigation measures towards morphological alterations of rivers.....	47
6.2	Comparison of the performance of Combined and separate sewer systems.	48
7	Conclusions.....	49
8	Outlook	55
