Contents

CHAPTER	PAGE
1 INTRODUCTION	1
2 SOME FUNDAMENTALS OF MODELS	3
2.1 The Model Explained	3
2.2 Economic Models	4
2.3 Regression Models	6
3 SIMPLE CORRELATION AND REGRESSION	9
3.1 Simple Linear Correlation Analysis	9
3.1.1 Correlation between Two Variables	9
3.1.2 Statistical Inference about ρ	11
3.2 Simple Linear Regression Analysis—An Introduction	12
3.2.1 Simple Linear Regression Models	13
3.2.2 The Least-Squares Method	16
3.3 The Fixed Models	22
3.3.1 Decomposition of a Variable	22
3.3.2 Fixed Model A	23
3.3.3 Fixed Model B	26
3.4 Statistical Inference in Fixed Models	26
3.4.1 Some Properties of Statistical Estimators	26
3.4.2 The Least-Squares (LS) Coefficient Estimators	33

CHAPTER	PAGE
3.4.3 Variation about the Regression Line	36
3.4.4 Testing Hypotheses in the Fixed Models	41
3.4.5 Prediction and Forecasting	48
4 MULTIPLE LINEAR REGRESSION	52
4.1 Introduction to Multiple Linear Regression	53
4.1.1 The Generality of Decomposition	54
4.1.2 Some Notational Agreements	54
4.1.3 Representation of a Linear Regression Model	56
4.1.4 The Least-Squares Method	57
4.1.5 An Illustration	61
4.1.6 Some Interesting LS Properties	63
4.2 Fixed Models	65
4.2.1 Assumptions of the Models	66
4.2.2 The LS Estimator for β	69
4.2.3 The Maximum Likelihood Estimator for β	71
4.2.4 Variation Around the LS Hyperplane	74
4.2.5 A Geometric View of the LS Estimation	76
4.2.6 Prediction and Forecasting	79
4.3 Some Useful Topics	80
4.3.1 The Uses of R^2	80
4.3.2 Interpreting the Regression Coefficients	82
4.3.3 Computational Problems	83
4.3.4 Presentation of Computed Results	87
5 TESTING THE FIXED MODELS	88
5.1 Testing Hypotheses About The Regression Coefficients	90
5.1.1 Separate Test	90
5.1.2 Joint Test	92
5.1.3 Partial Joint Test	99
5.1.4 The Use of R^2 in the Partial Joint Tests	102
5.2 Testing For Structural Stability	103
5.2.1 Constancy of Entire Set of Regression Coefficients	104
5.2.2 Constancy of a Subset of Regression Coefficients	112

CHAPTER	PAGE
5.3 General Linear Hypothesis	116
5.3.1 A Linear Combination of the Coefficients	118
5.3.2 A Number of Independent Linear Combinations—Estimation	121
5.3.3 A Number of Independent Linear Combinations—Testing .	123
6 GENERALIZED LEAST SQUARES	127
6.1 The Generalized Linear Regression Model	127
6.2 Aitken's Generalized Least Squares	129
6.3 Further Estimation Problems	131
6.4 Analysis of Residuals	133
6.5 Autocorrelation in the Disturbances	135
6.5.1 The OLS Estimators	136
6.5.2 Testing for First Order Autocorrelation	139
6.5.3 The BLUS Residuals	142
6.5.4 Estimating Autocorrelation Coefficient	143
6.6 Heteroskedasticity	146
7 PROBLEMS AND VARIANTS OF THE STANDARD MODEL	148
7.1 Multicollinearity	149
7.1.1 Orthogonal Regression	149
7.1.2 Effects of Multicollinearity on Specification	150
7.1.3 Detection and Solution of Multicollinearity	153
7.1.4 The Second Moments Criterion	156
7.2 Errors in the Variables	158
7.2.1 The Classical Case I	158
7.2.2 Modified Classical Case I	160
7.2.3 Permanent Income Hypothesis	160
7.2.4 Modified Classical Case II	161
7.3 Qualitative or Discrete Variables	163
7.3.1 Dummy Variable Technique	163
7.3.2 Additivity Versus Interaction	167
7.3.3 Dichotomous Dependent Variable	169
7.4 Introduction to Nonlinear Regression	172
7.4.1 Some Preliminaries	172
7.4.2 An Iterative Estimation Procedure	173

CHAPTER		PAGE
7.5 Stochastic Explanatory Variables		176
7.5.1 The Special Case		176
7.5.2 The General Case		179
7.5.3 Instrumental Variable Technique		179
7.6 Lagged Variables as Regressors		180
7.6.1 Distributed Lag Models		180
7.6.2 Lagged Dependent Variable		182
8 MULTIVARIATE REGRESSION		183
8.1 Multivariate Linear Regression Model		184
8.1.1 Notations and the Model		184
8.1.2 Estimation		185
8.1.3 Error of Forecast in Multivariate Regression Model		191
8.2 Sets of Regression Equations		194
8.2.1 Notations and Applications		195
8.2.2 Efficient Estimation		197
8.2.3 What Do We Gain?		199
8.3 Setwise Least Squares		203
8.3.1 Production Function of a Fishing Industry		203
8.3.2 A Multi-Cross-Section Study of Automobile Buying		205
9 INTRODUCTION TO SIMULTANEOUS EQUATIONS		208
9.1 Introduction		208
9.2 Terminology and Notations		210
9.2.1 The Structural Form		210
9.2.2 Prior Specification		211
9.3 Identifying a Structural Equation		213
9.3.1 Supply or Demand?		213
9.3.2 Reduced Form and Identification		216
9.3.3 Rank and Order Conditions		218
9.3.4 Identification and Estimation		221
10 SIMULTANEOUS EQUATIONS—SOME ESTIMATION PROCEDURES		222
10.1 Indirect Least Squares		223
10.1.1 Reduced Form Estimation		223
10.1.2 The ILS Procedure		225

CHAPTER	PAGE
10.2 Two-Stage Least Squares (2SLS)	228
10.2.1 The Meaning of Overidentification	228
10.2.2 The Procedure of 2SLS	228
10.2.3 Computational Notes	230
10.3 Three-Stage Least Squares (3SLS)	232
10.3.1 Single Equation and Systems Methods Illustrated	232
10.3.2 The 3SLS Procedure	233
10.3.3 A Comparison of 2SLS and 3SLS Estimates	238
10.4 Applications	240
10.4.1 Derived Reduced Form	240
10.4.2 Forecasting	243
10.4.3 Simulation	243
10.4.4 Model's Dynamic Properties and Multipliers	244
 APPENDIX A Statistical Tables	249
APPENDIX B Some Concepts and Results of Matrices	258
BIBLIOGRAPHY	267
INDEX	273
