Inv.-Nr. B 22 214

Contents

	<u>page</u>
1. Introduction	1
1.1. Scope of the Book	1
1.2. The Net Present Value in the Theory of Corporate Finance	1
1.3. Review of Dynamic Models of the Firm	4
1.4. Outline of the Book	7
2. The Net Present Value in Dynamic Models of the Firm	9
2.1. Introduction	9
2.2. The Net Present Value in a Model with the Possibility of Debt Financing	10
2.2.1. Model Formulation and Optimal Solution	10
2.2.2. The Net Present Value and Further Economic Analysis	17
2.3. The Net Present Value in a Model with Activity Analysis	21
2.3.1. Model Formulation and Optimal Solution	21
2.3.2. The Net Present Value and Further Economic Analysis	28
2.4. The Net Present Value in a Model with Corporate and Personal Taxation	31
2.4.1. Model Formulation and Optimal Solution	31
2.4.2. The Net Present Value and Further Economic Analysis	34
2.5. The Net Present Value in a Model with a Growing Economic Environment	36
2.5.1. Model Formulation and Optimal Solution	36
2.5.2. The Net Present Value and Further Economic Analysis	40
2.6. Summary	41

3.	The Net Present Value in Dynamic Adjustment Cost Models of the Firm	43
3.1.	Introduction	43
3.2.	The Theory of Adjustment Costs	44
3.3.	A Dynamic Model of the Firm with a Financial Structure and a Convex Adjustment Cost Function	47
3.3.1.	Model Formulation and Solution Concept	47
3.3.2.	The Net Present Value and Further Economic Analysis	50
3.4.	Dynamic Firm Behavior under a Concave Adjustment Cost Function	57
3.4.1.	A Standard Optimal Control Model	57
3.4.2.	Model Formulation and Solution when Applying Impulse Control	62
3.5.	Summary	70
4.	Dynamic Firm Behavior within an Uncertain Environment	71
4.1.	Introduction	71
4.2.	A Stochastic Dynamic Model of a Profit Maximizing Firm	72
4.3.	A Stochastic Dynamic Model under the Assumption of Risk-Averse Investor Behavior	79
4.3.1.	Model Formulation and Optimal Solution	79
4.3.2.	The Model Extended with the Intertemporal Capital Asset Pricing Model	88
4.4.	Summary	91
5.	Conclusions	93
	<u>Appendix 1. Solutions of The Models of Chapter 2</u>	97
A1.1.	The Model with the Possibility of Debt Financing	97
A1.1.1.	The Optimal Trajectories	97
A1.1.2.	The Net Present Value Formulas	103

VII

A1.2. The Model with Activity Analysis	107
A1.2.1. The Optimal Trajectories	107
A1.2.2. A Comparison with the Results of Van Loon	119
A1.2.3. The Net Present Value Formulas	124
A1.3. The Model with Corporate and Personal Taxation	126
A1.3.1. The Optimal Trajectory	126
A1.3.2. A Comparison with the Results of Van Schijndel	129
A1.3.3. The Net Present Value Formulas	132
A1.4. The Model with a Growing Economic Environment	133
A1.4.1. The Optimal Trajectory	133
A1.4.2. The Net Present Value Formulas	138
 Appendix 2. Solutions of the Models of Chapter 3	140
 A2.1. The Model with a Financial Structure and a Convex Adjustment Cost Function	140
A2.1.1. The Optimal Trajectories	140
A2.1.2. The Net Present Value Formulas	147
A2.1.3. Extension of the Planning Period	148
A2.1.4. The Case of an Infinite Time Horizon	151
A2.2. The Model with a Linear Adjustment Cost Function	153
A2.3. The Model with Concave Adjustment Costs and Impulse Controls	157
 Appendix 3. The Additional Solutions and Mathematical Proofs of Chapter 4	160
 A3.1. The Model of a Profit Maximizing Firm	160
A3.2. The Model under the Assumption of Risk-Averse Investor Behavior	168
 List of Symbols	180
