CONTENTS

Introduction to the series v

Preface vii

Acknowledgement xi

Notation xiii

PART I

Chapter 1. Incentives in economic systems 3

1.1. Three roots of this study 3
1.2. Incentives and public goods 5
1.3. Some early attempts to solve the free rider problem 8
1.4. Dynamic planning procedures 9
1.5. Empirical evidence on the free-rider problem 10

Chapter 2. Social choice theory 13

2.1. Introduction 13
2.2. Arrow's impossibility theorem 14
2.3. Gibbard–Satterthwaite theorem 16
2.4. Possibilities for positive results 19

PART II

Chapter 3. The basic model 27

3.1. Decisions about fixed size projects 27
3.2. Costless projects and financing decisions 29
3.3. Willingness to pay and the separability assumption 31
3.4. Social states, allowable transfers and the characterization of optimality 32

3.5. Mechanisms as non-cooperative games 34
3.6. The dominant strategy property 35
3.7. Satisfactoriness 37
3.8. The idea behind satisfactory mechanisms 38
3.9. Groves mechanisms and the pivotal mechanism 39
3.10. A first characterization theorem 43

Chapter 4. Satisfactory mechanisms 47

4.1. Description of social states and allowable utility functions 47
4.2. Mechanisms 49
4.3. Optimality and characterization theorems: Definitions and objectives 53
4.4. Optimality and characterization theorems: Results 56
4.5. Optimality and characterization theorems: Extensions 66
4.6. Applications: Successful and unsuccessful 70

Chapter 5. On the limitations of dominant-strategy mechanisms 79

5.1. Introduction 79
5.2. Separability 79
5.3. Budget balance 90
5.4. Lower boundedness 97
5.5. Coalition incentive compatibility 115

Chapter 6. Individual rationality 121

6.1. Individual rationality and anonymity 121
6.2. Individual rationality on average 123
6.3. Willingness to participate in the sample 127

Chapter 7. Approaches to incentive compatibility not requiring dominance 131

7.1. Introduction 131
7.2. The Dubins mechanism 132
7.3. Problems with bounded consumption in maximin procedures 135
7.4. Mechanisms based on expected utility maximizing strategies 141
7.5. Willingness to participate in processes based on expected utility maximizing strategies 146
7.6. The Nash equilibrium approach 148

PART III

Chapter 8. Large number economies 157

8.1. Public goods and large numbers 157
8.2. Diversity of tastes 158

8.3. The validity of asymptotic results 159
8.4. Large numbers, incentives and personal information 160
8.5. The role of sampling 161
8.6. Random social choice 162

Chapter 9. On the imbalance of the budget 165

9.1. Introduction 165
9.2. The surplus for the Clarke mechanism 166
9.3. The case of normally distributed statements 167
9.4. The case of uniformly distributed statements 170
9.5. General distributions of statements 172
9.6. Asymptotic dominance 175
9.7. Asymptotic truthfulness without symmetry assumptions 181
9.8. Asymptotic successfulness 183
9.9. Conclusion 188

Chapter 10. Coalition incentive compatibility 189

10.1. Introduction 189
10.2. Optimal cheating by a coalition 189
10.3. Value of optimal cheating 192
10.4. Generalizations 196
10.5. Conclusion 199

Chapter 11. Large numbers and separability 201

11.1. Biased mechanisms with non-separable preferences 201
11.2. Symmetry and the elimination of bias 205
11.3. Direct correction of the bias 206

Chapter 12. Economies in acquiring information through sampling 213

12.1. Costs of mechanisms 213
12.2. Imperfect information of the planner 214
12.3. Sampling costs constant per capita 217
12.4. Sampling costs proportional to total transfer payments 218
12.5. Optimal sample sizes 219
12.6. A lower bound for the per capita gain of the experiment 222
12.7. Simulations 224
12.8. Sample sizes and asymptotic gains for the Clarke mechanism 226
12.9. Conclusion 227

Chapter 13. Imperfect personal information 229

13.1. Introduction 229
13.2. The strength of incentives 230

13.3. Individual behavior 231
13.4. Optimal sample size 235
13.5. Informational value of processes with imperfect personal information 237
13.6. Summary of this model 238
13.7. A more general model 239
13.8. Optimal purchase of information 241
13.9. Optimal sample sizes 243

PART IV

Chapter 14. Dynamic approaches 249

14.1. Procedures 249
14.2. The model 250
14.3. Bowen's procedure 251
14.4. The naive procedure 255
14.5. Conclusions 256

Chapter 15. The MDP procedure 259

15.1. Definition of the MDP procedure 259
15.2. Stability 260
15.3. Maximin property 261
15.4. Neutrality 264
15.5. Nash equilibria 265

Chapter 16. A new procedure 269

16.1. The procedure 269
16.2. On individual rationality 273
16.3. Several public goods 274
16.4. Other interpretations of procedure A 279
