Preface	xvii
Series Preface	xix

Part I VEHICLE – PROPULSION FUNDAMENTALS

1	Introduction	3
1.1	Trends	4
1.1.1	<i>Energy and Environment</i>	4
1.1.2	<i>Downsizing</i>	4
1.1.3	<i>Hybridization</i>	6
1.1.4	<i>Driver Support Systems and Optimal Driving</i>	6
1.1.5	<i>Engineering Challenges</i>	8
1.2	Vehicle Propulsion	8
1.2.1	<i>Control Enabling Optimal Operation of Powertrains</i>	9
1.2.2	<i>Importance of Powertrain Modeling and Models</i>	10
1.2.3	<i>Sustainability of Model Knowledge</i>	11
1.3	Organization of the Book	11
2	Vehicle	15
2.1	Vehicle Propulsion Dynamics	15
2.2	Driving Resistance	16
2.2.1	<i>Aerodynamic Drag</i>	17
2.2.2	<i>Cooling Drag and Active Air-Shutters</i>	18
2.2.3	<i>Air Drag When Platooning</i>	19
2.2.4	<i>Rolling Resistance – Physical Background</i>	20
2.2.5	<i>Rolling Resistance – Modeling</i>	21
2.2.6	<i>Wheel Slip (Skid)</i>	24
2.2.7	<i>Rolling Resistance – Including Thermal Modeling</i>	25
2.2.8	<i>Gravitation</i>	27
2.2.9	<i>Relative Size of Components</i>	28
2.3	Driving Resistance Models	28
2.3.1	<i>Models for Driveline Control</i>	29
2.3.2	<i>Standard Driving Resistance Model</i>	30
2.3.3	<i>Modeling for Mission Analysis</i>	31
2.4	Driver Behavior and Road Modeling	32
2.4.1	<i>Simple Driver Model</i>	32
2.4.2	<i>Road Modeling</i>	33

2.5	Mission Simulation	34
2.5.1	Methodology	34
2.6	Vehicle Characterization/Characteristics	34
2.6.1	Performance Measures	35
2.7	Fuel Consumption	36
2.7.1	Energy Density Weight	36
2.7.2	From Tank to Wheel – Sankey Diagram	37
2.7.3	Well-to-Wheel Comparisons	38
2.8	Emission Regulations	39
2.8.1	US and EU Driving Cycles and Regulations	39
3	Powertrain	45
3.1	Powertrain Architectures	45
3.1.2	Exhaust Gas Energy Recovery	47
3.1.3	Hybrid Powertrains	47
3.1.4	Electrification	48
3.2	Vehicle Propulsion Control	50
3.2.1	Objectives of Vehicle Propulsion Control	50
3.2.2	Implementation Framework	51
3.2.3	Need for a Control Structure	52
3.3	Torque-Based Powertrain Control	52
3.3.1	Propagation of Torque Demands and Torque Commands	52
3.3.2	Torque-Based Propulsion Control – Driver Interpretation	54
3.3.3	Torque-Based Propulsion Control – Vehicle Demands	55
3.3.4	Torque-Based Propulsion Control – Driveline management	55
3.3.5	Torque-Based Propulsion Control – Driveline–Engine Integration	55
3.3.6	Handling of Torque Requests – Torque Reserve and Interventions	56
3.4	Hybrid Powertrains	58
3.4.1	ICE Handling	58
3.4.2	Motor Handling	59
3.4.3	Battery Management	59
3.5	Outlook and Simulation	60
3.5.1	Simulation Structures	60
3.5.2	Drive/Driving Cycle	60
3.5.3	Forward Simulation	61
3.5.4	Quasi-Static Inverse Simulation	61
3.5.5	Tracking	61
3.5.6	Inverse Dynamic Simulation	62
3.5.7	Usage and Requirements	64
3.5.8	Same Model Blocks Regardless of Method	65

Part II ENGINE – FUNDAMENTALS

4	Engine – Introduction	69
4.1	Air, Fuel, and Air/Fuel Ratio	69
4.1.1	Air	69

4.1.2	Fuel
4.1.3	Stoichiometry
4.2	Engine Geometry
4.3	Engine Performance
4.3.1	Power
4.3.2	Efficiency
4.3.3	Volume
4.4	Downsizing
4.4.1	Supercritical
5	Thermodynamics
5.1	The Four-Stroke Cycle
5.1.1	Implications
5.2	Thermodynamic Processes
5.2.1	Ideal
5.2.2	Deviation
5.2.3	Gas
5.2.4	Real
5.3	Efficiency of Cycles
5.3.1	Low
5.3.2	(At)
5.3.3	Di
5.4	Models for
5.4.1	Stoichiometry
5.4.2	Heat
5.4.3	Ch
5.4.4	M
5.4.5	A
5.4.6	M
5.4.7	Ap
6	Combustion
6.1	Mixture Preparation
6.1.1	Fuel
6.1.2	C
6.2	SI Engine Combustion
6.2.1	SI
6.2.2	K
6.2.3	A
6.3	CI Engine Combustion
6.3.1	A
6.4	Engine Emissions
6.4.1	G
6.4.2	P
6.4.3	P
6.5	Exhaust Gas
6.5.1	C

4.1.2	<i>Fuels</i>	70
4.1.3	<i>Stoichiometry and (A/F) Ratio</i>	71
4.2	Engine Geometry	73
4.3	Engine Performance	74
4.3.1	<i>Power, Torque, and Mean Effective Pressure</i>	74
4.3.2	<i>Efficiency and Specific Fuel Consumption</i>	75
4.3.3	<i>Volumetric Efficiency</i>	76
4.4	Downsizing and Turbocharging	77
4.4.1	<i>Supercharging and Turbocharging</i>	78
5	Thermodynamics and Working Cycles	81
5.1	The Four-Stroke Cycle	81
5.1.1	<i>Important Engine Events in the Cycle</i>	84
5.2	Thermodynamic Cycle Analysis	85
5.2.1	<i>Ideal Models of Engine Processes</i>	86
5.2.2	<i>Derivation of Cycle Efficiencies</i>	89
5.2.3	<i>Gas Exchange and Pumping Work</i>	91
5.2.4	<i>Residual Gases and Volumetric Efficiency for Ideal Cycles</i>	93
5.3	Efficiency of Ideal Cycles	98
5.3.1	<i>Load, Pumping Work, and Efficiency</i>	99
5.3.2	<i>(A/F) Ratio and Efficiency</i>	100
5.3.3	<i>Differences between Ideal and Real Cycles</i>	103
5.4	Models for In-Cylinder Processes	105
5.4.1	<i>Single-Zone Models</i>	105
5.4.2	<i>Heat Release and Mass Fraction Burned Analysis</i>	107
5.4.3	<i>Characterization of Mass Fraction Burned</i>	109
5.4.4	<i>More Single-Zone Model Components</i>	111
5.4.5	<i>A Single-zone Cylinder Pressure Model</i>	113
5.4.6	<i>Multi-zone Models</i>	114
5.4.7	<i>Applications for Zero-dimensional Models</i>	117
6	Combustion and Emissions	119
6.1	Mixture Preparation and Combustion	119
6.1.1	<i>Fuel Injection</i>	119
6.1.2	<i>Comparing the SI and CI Combustion Process</i>	120
6.2	SI Engine Combustion	121
6.2.1	<i>SI Engine Cycle-to-Cycle Variations</i>	121
6.2.2	<i>Knock and Autoignition</i>	122
6.2.3	<i>Autoignition and Octane Number</i>	124
6.3	CI Engine Combustion	126
6.3.1	<i>Autoignition and Cetane Number</i>	126
6.4	Engine Emissions	128
6.4.1	<i>General Trends for Emission Formation</i>	128
6.4.2	<i>Pollutant Formation in SI Engines</i>	130
6.4.3	<i>Pollutant Formation in CI Engines</i>	134
6.5	Exhaust Gas Treatment	137
6.5.1	<i>Catalyst Efficiency, Temperature, and Light-Off</i>	137

6.5.2	<i>SI Engine Aftertreatment, TWC</i>	139
6.5.3	<i>CI Engine Exhaust Gas Treatment</i>	140
6.5.4	<i>Emission Reduction and Controls</i>	142

Part III ENGINE - MODELING AND CONTROL

7	Mean Value Engine Modeling	145
7.1	Engine Sensors and Actuators	146
7.1.1	<i>Sensor, System, and Actuator Responses</i>	146
7.1.2	<i>Engine Component Modeling</i>	149
7.2	Flow Restriction Models	149
7.2.1	<i>Incompressible Flow</i>	151
7.2.2	<i>Compressible Flow</i>	154
7.3	Throttle Flow Modeling	156
7.3.1	<i>Throttle Area and Discharge Coefficient</i>	157
7.4	Mass Flow Into the Cylinders	159
7.4.1	<i>Models for Volumetric Efficiency</i>	159
7.5	Volumes	162
7.6	Example - Intake Manifold	166
7.7	Fuel Path and (A/F) Ratio	168
7.7.1	<i>Fuel Pumps, Fuel Rail, Injector Feed</i>	168
7.7.2	<i>Fuel Injector</i>	169
7.7.3	<i>Fuel Preparation Dynamics</i>	171
7.7.4	<i>Gas Transport and Mixing</i>	174
7.7.5	<i>A/F Sensors</i>	174
7.7.6	<i>Fuel Path Validation</i>	178
7.7.7	<i>Catalyst and Post-Catalyst Sensor</i>	178
7.8	In-Cylinder Pressure and Instantaneous Torque	180
7.8.1	<i>Compression Asymptote</i>	180
7.8.2	<i>Expansion Asymptote</i>	182
7.8.3	<i>Combustion</i>	183
7.8.4	<i>Gas Exchange and Model Compilation</i>	184
7.8.5	<i>Engine Torque Generation</i>	184
7.9	Mean Value Model for Engine Torque	186
7.9.1	<i>Gross Indicated Work</i>	187
7.9.2	<i>Pumping Work</i>	190
7.9.3	<i>Engine Friction</i>	190
7.9.4	<i>Time Delays in Torque Production</i>	192
7.9.5	<i>Crankshaft Dynamics</i>	193
7.10	Engine-Out Temperature	193
7.11	Heat Transfer and Exhaust Temperatures	196
7.11.1	<i>Temperature Change in a Pipe</i>	196
7.11.2	<i>Heat Transfer Modes in Exhaust Systems</i>	197
7.11.3	<i>Exhaust System Temperature Models</i>	197
7.12	Heat Exchangers and Intercoolers	203
7.12.1	<i>Heat Exchanger Modeling</i>	204

7.13	Throttle Pla	
	7.13.1 M	
8	Turbochar	
8.1	Supercharg	
8.2	Turbocharg	
	8.2.1 T	
	8.2.2 F	
	8.2.3 F	
	8.2.4 C	
	8.2.5 In	
8.3	Dimension	
	8.3.1 C	
	8.3.2 M	
8.4	Compress	
	8.4.1 T	
	8.4.2 T	
	8.4.3 M	
	8.4.4 T	
	8.4.5 I	
8.5	Turbochar	
	8.5.1 A	
8.6	Compress	
	8.6.1 I	
	8.6.2 C	
	8.6.3 C	
	8.6.4 In	
	8.6.5	
8.7	Turbine C	
	8.7.1	
	8.7.2	
	8.7.3	
8.8	Transient	
8.9	Example	
8.10	Example	
9	Engine M	
9.1	Engine M	
	9.1.1	
	9.1.2	
9.2	Basic Fu	
	9.2.1	
	9.2.2	
	9.2.3	
9.3	Calibrat	
	9.3.1	
	9.3.2	

7.13	Throttle Plate Motion	206
	7.13.1 <i>Model for Throttle with Throttle Servo</i>	210
8	Turbocharging Basics and Models	211
8.1	Supercharging and Turbocharging Basics	211
8.2	Turbocharging Basic Principles and Performance	214
	8.2.1 <i>Turbochargers in Mean Value Engine Models</i>	214
	8.2.2 <i>First Law Analysis of Compressor Performance</i>	216
	8.2.3 <i>First Law Analysis of Turbine Performance</i>	218
	8.2.4 <i>Connecting the Turbine and Compressor</i>	219
	8.2.5 <i>Intake Air Density Increase</i>	219
8.3	Dimensional Analysis	220
	8.3.1 <i>Compressible Fluid Analysis</i>	221
	8.3.2 <i>Model Structure with Corrected Quantities</i>	223
8.4	Compressor and Turbine Performance Maps	223
	8.4.1 <i>The Basic Compressor Map</i>	223
	8.4.2 <i>The Basic Turbine Map</i>	225
	8.4.3 <i>Measurement Procedures for determining Turbo Maps</i>	226
	8.4.4 <i>Turbo Performance Calculation Details</i>	227
	8.4.5 <i>Heat Transfer and Turbine Efficiency</i>	230
8.5	Turbocharger Models and Parametrizations	232
	8.5.1 <i>Map Interpolation Models</i>	232
8.6	Compressor Operation and Modeling	232
	8.6.1 <i>Physical Modeling of a Compressor</i>	233
	8.6.2 <i>Compressor Efficiency Models</i>	237
	8.6.3 <i>Compressor Flow Models</i>	239
	8.6.4 <i>Compressor Choke</i>	241
	8.6.5 <i>Compressor Surge</i>	244
8.7	Turbine Operation and Modeling	249
	8.7.1 <i>Turbine Mass Flow</i>	249
	8.7.2 <i>Turbine Efficiency</i>	252
	8.7.3 <i>Variable Geometry Turbine</i>	253
8.8	Transient Response and Turbo Lag	254
8.9	Example – Turbocharged SI Engine	255
8.10	Example – Turbocharged Diesel Engine	257
9	Engine Management Systems – An Introduction	263
9.1	Engine Management System (EMS)	263
	9.1.1 <i>EMS Building Blocks</i>	264
	9.1.2 <i>System for Crank and Time-Based Events</i>	265
9.2	Basic Functionality and Software Structure	266
	9.2.1 <i>Torque Based Structure</i>	266
	9.2.2 <i>Special Modes and Events</i>	267
	9.2.3 <i>Automatic Code Generation and Information Exchange</i>	267
9.3	Calibration and Parameter Representation	267
	9.3.1 <i>Engine Maps</i>	268
	9.3.2 <i>Model-Based Development</i>	270

10	Basic Control of SI Engines	271
10.1	Three Basic SI Engine Controllers	272
10.1.1	Production System Example	273
10.1.2	Basic Control Using Maps	274
10.1.3	Torque, Air Charge, and Pressure Control	275
10.1.4	Pressure Set Point from Simple Torque Model	275
10.1.5	Set Points from Full Torque Model	276
10.1.6	Pressure Control	277
10.2	Throttle Servo	279
10.2.1	Throttle Control Based on Exact Linearization	280
10.3	Fuel Management and λ Control	282
10.3.1	Feedforward and Feedback λ Control Structure	283
10.3.2	Feedforward λ Control with Basic Fuel Metering	283
10.3.3	Feedback λ Control	284
10.3.4	Fuel Dynamics and Injector Compensation	289
10.3.5	Observer Based λ Control and Adaption	290
10.3.6	Dual and Triple Sensor λ Control	293
10.4	Other Factors that Influence λ Control	294
10.4.1	Full Load Enrichment	295
10.4.2	Engine Overspeed and Overrun	296
10.4.3	Support Systems that Influence Air and Fuel Calculation	296
10.4.4	Cold Start Enrichment	298
10.4.5	Individual Cylinder λ -control	298
10.5	Ignition Control	299
10.5.1	Knock Control – Feedback Control	301
10.5.2	Ignition Energy – Dwell Time Control	304
10.5.3	Long-term Torque, Short-term Torque, and Torque Reserve	305
10.6	Idle Speed Control	306
10.7	Torque Management and Idle Speed Control	307
10.8	Turbo Control	308
10.8.1	Compressor Anti-surge Control	308
10.8.2	Boost Pressure Control	309
10.8.3	Boost Pressure Control with Gain Scheduling	312
10.8.4	Turbo and Knock Control	314
10.9	Dependability and Graceful Degradation	315
11	Basic Control of Diesel Engines	317
11.1	Overview of Diesel Engine Operation and Control	317
11.1.1	Diesel Engine Emission Trade-Off	318
11.1.2	Diesel Engine Configuration and Basics	319
11.2	Basic Torque Control	320
11.2.1	Feedforward Fuel Control	322
11.3	Additional Torque Controllers	322
11.4	Fuel Control	323
11.4.1	Control signal – Multiple Fuel Injections	324
11.4.2	Control Strategies for Fuel Injection	326
11.5	Control of Gas Flows	327

	11.5.1	Exh
	11.5.2	EG
11.6	Case Study:	
	11.6.1	Co
	11.6.2	Sys
	11.6.3	Co
	11.6.4	PI
	11.6.5	Ey
	11.6.6	Su
11.7	Diesel After	
12	Engine-So	
12.1	Variable Val	
	12.1.1	Va
	12.1.2	Eff
	12.1.3	Of
	12.1.4	VV
	12.1.5	A
12.2	Variable Co	
	12.2.1	Ex
	12.2.2	Ac
12.3	Signal Inter	
	12.3.1	Io
	12.3.2	Es
	12.3.3	C
Part IV DRIVE		
13	Driveline	
13.1	Driveline	
13.2	Motivation	
	13.2.1	P
	13.2.2	D
	13.2.3	P
	13.2.4	A
13.3	Behavior v	
	13.3.1	V
	13.3.2	T
	13.3.3	C
13.4	Approach	
	13.4.1	T
	13.4.2	M
14	Driveline	
14.1	General M	
	14.1.1	C
	14.1.2	C

	11.5.1 Exhaust Gas Recirculation (EGR)	328
	11.5.2 EGR and Variable Geometry Turbine (VGT)	329
11.6	Case Study: EGR and VGT Control and Tuning	332
	11.6.1 Control Objectives	333
	11.6.2 System Properties that Guide the Control Design	334
	11.6.3 Control Structure	336
	11.6.4 PID Parameterization, Implementation, and Tuning	340
	11.6.5 Evaluation on European Transient Cycle	343
	11.6.6 Summing up the EGR VGT Case Study	346
11.7	Diesel After Treatment Control	346
12	Engine—Some Advanced Concepts	349
12.1	Variable Valve Actuation	349
	12.1.1 Valve Profiles	351
	12.1.2 Effects of Variable Valve Actuation	352
	12.1.3 Other Valve Enabled Functions	354
	12.1.4 VVA and Its Implications for Model Based Control	355
	12.1.5 A Remark on Air and Fuel Control Strategies	355
12.2	Variable Compression	356
	12.2.1 Example – The SAAB Variable Compression Engine	357
	12.2.2 Additional Controls	358
12.3	Signal Interpretation and Feedback Control	361
	12.3.1 Ion-sense	361
	12.3.2 Example – Ion-sense Ignition Feedback Control	365
	12.3.3 Concluding Remarks and Examples of Signal Processing	369
Part IV DRIVELINE – MODELING AND CONTROL		
13	Driveline Introduction	373
13.1	Driveline	373
13.2	Motivations for Driveline Modeling and Control	373
	13.2.1 Principal Objectives and Variables	374
	13.2.2 Driveline Control vs. Longitudinal Vehicle Propulsion Control	375
	13.2.3 Physical Background	375
	13.2.4 Application-driven Background	375
13.3	Behavior without Appropriate Control	376
	13.3.1 Vehicle Shuffle, Vehicle Surge	376
	13.3.2 Traversing Backlash—shunt and Shuffle	377
	13.3.3 Oscillations After Gear Disengagement	377
13.4	Approach	380
	13.4.1 Timescales	380
	13.4.2 Modeling and Control	380
14	Driveline Modeling	381
14.1	General Modeling Methodology	381
	14.1.1 Graphical Scheme of a Driveline	382
	14.1.2 General Driveline Equations	382

14.2	A Basic Complete Model – A Rigid Driveline	384
14.2.1	Combining the Equations	385
14.2.2	Reflected Mass and Inertias	386
14.3	Driveline Surge	386
14.3.1	Experiments for Driveline Modeling	386
14.3.2	Model with Driveshaft Flexibility	387
14.4	Additional Driveline Dynamics	391
14.4.1	Influence on Parameter Estimation	391
14.4.2	Character of Deviation in Validation Data	392
14.4.3	Influence from Propeller-shaft Flexibility	393
14.4.4	Parameter Estimation with Springs in Series	394
14.4.5	Sensor Dynamics	395
14.5	Clutch Influence and Backlash in General	396
14.5.1	Model with Flexible Clutch and Driveshaft	396
14.5.2	Nonlinear Clutch and Driveshaft Flexibility	400
14.5.3	Backlash in General	403
14.6	Modeling of Neutral Gear and Open Clutch	404
14.6.1	Experiments	404
14.6.2	A Decoupled Model	405
14.7	Clutch Modeling	406
14.7.1	Clutch Modes	409
14.8	Torque Converter	409
14.9	Concluding Remarks on Modeling	411
14.9.1	A Set of Models	411
14.9.2	Model Support	411
14.9.3	Control Design and Validating Simulations	412
15	Driveline Control	413
15.1	Characteristics of Driveline Control	414
15.1.1	Inclusion in Torque-Based Powertrain Control	414
15.1.2	Consequence of Sensor Locations	415
15.1.3	Torque Actuation	415
15.1.4	Transmissions	416
15.1.5	Engine as Torque Actuator	417
15.1.6	Control Approaches	418
15.2	Basics of Driveline Control	419
15.2.1	State-Space Formulation of the Driveshaft Model	419
15.2.2	Disturbance Description	420
15.2.3	Measurement Description	420
15.2.4	Performance Output	420
15.2.5	Control Objective	421
15.2.6	Controller Structures	421
15.2.7	Notation for Transfer Functions	422
15.2.8	Some Characteristic Feedback Properties	422
15.2.9	Insight from Simplified Transfer Functions	425
15.3	Driveline Speed Control	427
15.3.1	RQV control	427

Preface

This book provides and drivelines. Mod and there are approx and there are approx of mechanics and fi neering and control of overall design of industry has given a when developing an

We have three ma component models, been important for and treatment of dif eling considerations shows how models timeless; but as a se and important, cont to illustrate control between conflicting course never used in systems integration vehicle models in lo consumption analys

As mentioned abe ticing engineers ben Electrical and Mech iversity since 1998. tailored courses for Green Car program IFP School in Paris Besides these audie work within the aut models here are an i nization and betwe

The text is writte general engineering matic control or sig
