Contents

Preface xiii

PART I

INTRODUCTION 1

Chapter 1 The Econometric Approach 2

1.1 What is econometrics? *2*
1.2 The nature of the econometric approach *2*
1.3 The purposes of econometrics *5*
1.4 An example—
the demand curve and the price elasticity of demand *6*
1.5 A second example—the consumption function *8*
1.6 A third example—the growth of science *9*
Bibliography *11*

PART II

MODELS AND DATA 13

Chapter 2 Models and Econometric Models 14

2.1 What is a model? *14*
2.2 Types of models;
verbal/logical and physical models *16*
2.3 Geometric models *17*
2.4 Algebraic models *20*
2.5 Econometric models *22*
2.6 The prototype micro model *28*
2.7 The prototype macro model *34*
2.8 The general econometric model:
Structural form and reduced form *39*
2.9 The final form *45*
2.10 Identification of the general econometric model *47*
Problems *51*
Bibliography *55*

Chapter 3 Data and Refined Data 57

3.1 What are data? *57*
3.2 Quantitative vs. qualitative data; dummy variables *58*
3.3 Time-series vs. cross-section data; pooling microdata *62*
3.4 Nonexperimental vs. experimental data *65*
3.5 Problems with the data *66*
3.6 "Massaging" the data *67*
3.7 Accuracy of economic data *70*
3.8 Sources of economic data *71*
Problems *74*
Bibliography *75*

PART III

SINGLE-EQUATION ESTIMATION 77

Chapter 4 The Basic Linear Regression Model 78

4.1 The linear regression model *78*
4.2 Data for the basic linear regression model *80*
4.3 The nature of regression analysis *82*
4.4 Least squares: The case of simple linear regression *84*
4.5 Maximum likelihood:
The case of simple linear regression *88*
4.6 Least squares: The case of multiple linear regression *91*
4.7 Maximum likelihood:
The case of multiple linear regression *98*
4.8 Properties of estimators *101*
4.9 The Gauss-Markov theorem and
the least-squares consistency theorem *106*
4.10 Prediction *109*
Problems *112*
Bibliography *118*

Chapter 5 Extensions and Illustrations of the Basic Linear Regression Model 120

5.1 A geometrical interpretation of least squares *120*
5.2 Multiple correlation coefficient and
coefficient of determination *124*
5.3 Analysis of variance for a regression *128*
5.4 Significance of coefficients and confidence intervals *128*
5.5 An example of simple linear regression *134*
5.6 An example of multiple linear regression *138*
5.7 Bayesian estimation of the linear regression model *141*
Problems *144*
Bibliography *149*

Chapter 6 Problems in the Basic Linear Regression Model 150

6.1 Problems–their diagnosis and their treatment *150*
6.2 Multicollinearity *151*
6.3 Heteroskedasticity *156*
6.4 Serial correlation *159*
6.5 Generalized least-squares estimators: "seemingly unrelated equations" *165*
6.6 Qualitative dependent variable; logit analysis *173*
6.7 Lagged variables and distributed lags *176*
6.8 Specification error *187*
6.9 Errors in the variables *190*
6.10 Structural break *193*
Problems *195*
Bibliography *200*

PART IV

APPLICATIONS OF SINGLE-EQUATION ESTIMATION 205

Chapter 7 Applications to Households; Demand Analysis 206

7.1 Introduction *206*
7.2 The theory of the household *207*
7.3 Single demand equations vs. systems of demand equations *216*
7.4 Single demand equations *217*
7.5 Systems of demand equations *225*
7.6 Identification *230*
7.7 Aggregation *233*
7.8 Dynamic demand analysis *235*
Problems *242*
Bibliography *248*

Chapter 8 Applications to Firms; Production Functions and Cost Functions 251

8.1 Introduction *251*
8.2 The theory of the firm *251*
8.3 Estimation of production functions *262*
8.4 Estimation of cost curves and cost functions *281*
8.5 Estimation of factor demand equations *285*
8.6 Technical change *288*
Problems *292*
Bibliography *298*

Chapter 9 Other Applications of Single-Equation Estimation 303

9.1 Introduction *303*
9.2 The demand for money *303*

9.3 Industrial organization *309*
9.4 Labor economics *313*
9.5 Health economics *316*
9.6 Economic history; cliometrics *320*
Problems *322*
Bibliography *325*

PART V

SIMULTANEOUS EQUATIONS 335

Chapter 10 The Simultaneous-Equations System and Its Identification 336

10.1 The simultaneous-equations system *336*
10.2 The problem of identification *342*
10.3 Identification by zero restrictions in the nonstochastic case *346*
10.4 Identification by general linear restrictions *352*
10.5 Recursive systems *358*
Problems *361*
Bibliography *367*

Chapter 11 Estimation of Simultaneous-Equations Systems 368

11.1 Introduction *368*
11.2 Naive, limited-information, and full-information approaches *373*
11.3 Ordinary least squares and least-squares bias *375*
11.4 Indirect least squares *379*
11.5 Two-stage least squares and *k*-class estimators *384*
11.6 Instrumental variables *394*
11.7 Three-stage least squares *402*
11.8 Full-information maximum likelihood *412*
11.9 Monte Carlo studies of small-sample properties of estimators *416*
Problems *421*
Bibliography *424*

PART VI

APPLICATIONS OF SIMULTANEOUS-EQUATIONS ESTIMATION 429

Chapter 12 Applications to Macroeconometric Models 430

12.1 The nature of macroeconometric models *430*
12.2 The Klein interwar model *432*
12.3 The Morishima-Saito model *436*
12.4 The Klein-Goldberger model *440*
12.5 The Wharton model *441*
12.6 The Brookings model *444*
12.7 The MPS model *448*

12.8 The DRI model *449*
12.9 A survey of macroeconometric models of the U.S. economy *451*
12.10 Trends in macroeconometric model construction *458*
Problems *460*
Bibliography *463*

Chapter 13 Other Applications of Simultaneous-Equations Estimation 469

13.1 Introduction *469*
13.2 Simultaneous-equations models of money demand and supply *469*
13.3 A simultaneous-equations model of industrial-organization relationships *475*
13.4 A simultaneous-equations model in labor economics *480*
13.5 Simultaneous-equations models of the health system *481*
Problems *484*
Bibliography *485*

PART VII

THE USES OF ECONOMETRICS 489

Chapter 14 Structural Analysis 490

14.1 The uses of econometrics *490*
14.2 The nature of structural analysis *491*
14.3 Comparative statics *492*
14.4 Elasticities *496*
14.5 Multipliers: Impact, interim, and long-run *499*
14.6 An example of multiplier analysis: The Suits study *501*
14.7 A second example of multiplier analysis: The Goldberger study *503*
14.8 A third example of multiplier analysis: The Morishima-Saito study *505*
Problems *506*
Bibliography *507*

Chapter 15 Forecasting 509

15.1 The nature of forecasting *509*
15.2 Alternative approaches to forecasting *511*
15.3 The econometric approach to forecasting; short-term forecasts *515*
15.4 Long-term forecasts *519*
15.5 Forecast accuracy *520*
15.6 Forecasting experience with macroeconometric models *525*
Problems *530*
Bibliography *535*

Chapter 16 Policy Evaluation 538

16.1 The nature of policy evaluation *538*
16.2 Alternative approaches to policy evaluation *539*
16.3 Policy evaluation using an econometric model *541*
16.4 The instruments-targets approach *543*
16.5 The social-welfare-function approach; optimal control *544*
16.6 The simulation approach *549*
16.7 The econometric approach to policy evaluation *553*
Problems *556*
Bibliography *557*

APPENDICES 561

Appendix A An Econometric Project 562

A.1 The nature of the econometric project *562*
A.2 The model *562*
A.3 The data *564*
A.4 Estimation of the model *566*
A.5 What to include in the write-up *567*
Bibliography *568*

Appendix B Matrices 569

B.1 Basic definitions and examples *569*
B.2 Some special matrices *570*
B.3 Matrix relations and operations *573*
B.4 Scalar-valued functions defined on matrices *579*
B.5 Inverse and generalized inverse matrices *582*
B.6 Systems of linear equations; solutions and least-squares fits *584*
B.7 Linear transformations and characteristic roots and vectors *588*
B.8 Quadratic forms *591*
B.9 Matrix derivatives *592*
B.10 Mathematical programming *595*
Bibliography *598*

Appendix C Probability and Statistics 599

C.1 Probability *599*
C.2 Random variables; distribution and density functions *602*
C.3 Mean, variance, covariance, and other moments; sample measures *607*
C.4 Some specific distributions *612*
Bibliography *617*
Tables *619*

Index 631
