

COMPREHENSIVE BIOCHEMISTRY

ALBERT NEUBERGER

(Volume Editor)

*Chairman of Governing Body, The Lister Institute
of Preventive Medicine, University of London,
London (Great Britain)*

LAURENS L.M. VAN DEENEN

*Professor of Biochemistry, Biochemical Laboratory,
Utrecht (The Netherlands)*

VOLUME 19A

AMINO ACID METABOLISM AND SULPHUR METABOLISM

ELSEVIER SCIENTIFIC PUBLISHING COMPANY

AMSTERDAM . OXFORD . NEW YORK

1981

CONTENTS

VOLUME 19A

AMINO ACID METABOLISM AND SULPHUR METABOLISM

General Preface	ix
Preface to Volume 19A	x

Chapter 1. Regulation of Amino Acid Metabolism
by H.E. UMBARGER

1. Introduction	1
2. Patterns of regulation of amino acid biosynthesis	2
2.1. Regulation of enzyme activity	3
2.1.1. Endproduct inhibition	4
2.1.2. Compensatory modulation of enzyme activity by ligand binding	14
2.1.3. Modification of enzymes as a control mechanism . . .	17
2.1.4. Regulation of metabolite flow by protein—protein interactions	21
2.1.5. General metabolic regulation of enzyme activity . . .	23
2.2. Regulation of enzyme amount	24
2.2.1. Regulation of enzyme synthesis	24
3. Patterns of regulation of amino acid breakdown	33
3.1. Factors affecting carbon flow in amino acid catabolic path- ways	34
3.2. Regulation of enzyme amount in amino acid catabolic path- ways	35
References	43

Chapter 2. Special Problems of Nitrogen Metabolism in Plants
by H. REINBOTHE, J. MIERSCH and K. MOTHE

1. Preface	51
1.1. Biological nitrogen fixation	52
1.2. Nitrate and nitrite assimilation	56

2. Ammonia and cyanide assimilation	58
2.1. Glutamine and glutamate synthesis	58
2.2. Carbamoylphosphate synthesis	61
2.3. Nitrogen assimilation in nitrogen-fixing angiosperms	63
2.4. Cyanide assimilation	69
3. Nitrogen transfer reactions in plants	73
3.1. Aminotransferases in amino acid biosynthesis	73
3.2. Amidotransferases and the central role of L-glutamine in nitrogen metabolism	75
3.3. Amidinotransferase and the major role of L-arginine in the biosynthesis of guanidino compounds	76
3.4. Biosynthesis of diamines and polyamines	78
3.4.1. Biosynthesis of putrescine and closely related simple compounds	78
3.4.2. The biosynthesis of spermidine and spermine	79
3.5. Biosynthesis of γ -glutamyl compounds in plants	86
4. Biosynthesis of "uncommon" amino acids in plants	93
4.1. <i>N</i> -Heterocyclic β -substituted alanines	95
4.2. Sulfate assimilation and the formation of sulfur amino acids	99
4.2.1. Assimilatory sulfate reduction by autotrophic plants and algae	100
4.2.2. Formation of sulfur-containing amino acids other than L-cysteine	104
4.3. Compounds with N—N bonds in plants and fungi	107
4.4. Isoxazolinone derivatives and other compounds with C—O—N bonds	110
5. Metabolism of guanidines in plants	112
5.1. Arginine catabolism in fungi	125
5.2. Urea assimilation in green algae and in yeasts	127
6. The physiological importance and pharmacological activity of "uncommon" amino acids from plants	135
7. Possible ecological significance of "uncommon" amino acids	140
References	143

Chapter 3. Metabolism of Simple Sulphur Compounds

by P.A. TRUDINGER and R.E. LOUGHLIN

1. Introduction	165
2. Uptake of sulphate	170
3. Activation of sulphate	173
4. Assimilatory sulphate reduction	177
4.1. PAPS-sulphotransferase	178
4.2. APS-sulphotransferase	180
4.3. Thiosulphonate reductase	181
4.4. Reduction of sulphite	183
5. Formation of carbon-bonded sulphur	187

6. Genetics of cysteine biosynthesis	192
7. Dissimilatory reduction of inorganic sulphur compounds	199
7.1. Sulphate reduction	200
7.1.1. Assimilation of sulphur by dissimilatory sulphate-reducing bacteria	205
7.2. Miscellaneous dissimilatory reductions of inorganic sulphur compounds	207
8. Degradation of organic sulphur	209
8.1. Cysteine	209
8.1.1. Sulphite oxidation	212
8.2. Methionine	215
9. Lithotrophic oxidation of inorganic sulphur compounds	216
9.1. Sulphide oxidation	217
9.2. Oxidation of elemental sulphur	220
9.3. Oxidation of sulphite	223
9.4. Oxidation of thiosulphate	227
9.5. Metabolism of polythionates	230
10. Assimilation of sulphur by lithotrophic sulphur bacteria	231
11. Concluding remarks	234
12. Acknowledgements	235
References	236

Chapter 4. The Metabolism of Glycine and Serine

by A. NEUBERGER

1. Glycine in proteins	258
2. Glycine in the mammalian organism	259
3. Overall metabolism of glycine in animals	260
4. Biosynthesis of glycine	261
4.1. Glycine formation associated with photosynthesis	261
4.2. Glycine formation through the operation of the glyoxylate cycle	264
4.3. Glycine and serine formation from 3-phosphoglycerate or glycerate	264
4.4. The conversion of L-serine to glycine	265
4.5. Glycine formation from L-threonine	268
4.6. The formation of glycine by the bacterial fermentation of purines	269
5. The glycine cleavage complex	270
6. The metabolism of glycine and serine in animals	273
7. Catabolism of serine and glycine in green plants	275
8. (a) Special features of glycine and serine metabolism in bacteria	277
(b) Glycine and serine in the microbial biochemistry of methane	277
9. Glycine and serine as precursors of "one-carbon" compounds	279
10. Biological carriers of "one-carbon" compounds	283
11. Purine formation	285

12. Serine as precursor of nitrogen-containing lipids	288
12.1. Synthesis of phosphatides in bacteria	288
12.2. Synthesis of phosphatides in animals	289
12.3. Serine as precursor of sphingosines	290
13. Conversion of serine to cysteine	293
14. Formation of glutathione	296
15. Glycine as precursor of haem and chlorophyll	298
16. Synthesis of acylglycines	299
17. Synthesis of creatine and creatinine	301
References	303

Chapter 5. Inheritable Abnormalities of Amino Acid Metabolism
by WILLIAM L. NYHAN

1. Introduction	305
1.1. Polymorphism — enzymic heterogeneity	310
1.2. Genetic counseling and prevention	311
1.3. Methods of study	312
2. Phenylketonuria (PKU)	313
2.1. Clinical features	314
2.2. Metabolism of phenylalanine	315
2.3. Biochemical findings	317
2.4. Molecular defect	318
2.5. Diagnosis	319
2.6. Treatment	320
2.7. Other disorders of phenylalanine metabolism	323
2.7.1. Hyperphenylalaninemia	323
2.7.2. Defects in dihydropteridine reductase and biopterin synthesis	323
2.8. Genetics	325
3. Tyrosinemia	326
3.1. Clinical features	327
3.1.1. Hereditary tyrosinemia	327
3.1.2. Hypertyrosinemia with cytosolic tyrosine trans- aminase deficiency	328
3.2. Metabolism of tyrosine	329
3.3. Biochemical features	330
3.4. Molecular defect	331
3.5. Diagnosis	332
3.6. Genetics	333
3.7. Treatment	333
4. Alkaptonuria	334
4.1. Clinical features	334
4.2. Metabolism of homogentisic acid	336
4.3. Biochemical features	336
4.4. Molecular defect	337

4.5. Genetics	337
4.6. Treatment	338
5. Albinism	338
5.1. Clinical features	338
5.2. Metabolism of tyrosine in the synthesis of melanin	341
5.3. Biochemical features — molecular defect	341
5.4. Genetics	342
5.5. Treatment	342
6. Histidinemia	342
6.1. Clinical features	343
6.2. Metabolism of histidine	344
6.3. Biochemical features of histidinemia	345
6.4. Molecular defect	347
6.5. Diagnosis	348
6.6. Genetics	348
6.7. Treatment	349
7. Abnormalities in the catabolism of lysine hyperlysinemia	349
7.1. Clinical features	350
7.2. Metabolism of lysine	351
7.3. Biochemical features	353
7.4. Molecular defect	354
7.5. Diagnosis	355
7.6. Genetics	356
7.7. Treatment	357
8. Glutaric aciduria	357
8.1. Clinical features	357
8.2. Metabolism of glutaric acid	359
8.3. Biochemical features	359
8.4. Molecular defect	362
8.5. Genetics	363
8.6. Treatment	363
9. Maple syrup urine disease (branched-chain ketoaciduria)	364
9.1. Clinical features	364
9.2. Metabolism of the branched-chain amino acids	366
9.3. Biochemical features	368
9.4. Molecular defect	369
9.5. Diagnosis	370
9.6. Genetics	370
9.7. Treatment	371
10. Isovaleric acidemia	372
10.1. Clinical features	372
10.2. Metabolism of isovaleric acid	373
10.3. Biochemical features	373
10.4. Molecular defect	373
10.5. Diagnosis	374
10.6. Treatment	374
10.7. Genetics	375
11. Propionic acidemia	375

11.1. Clinical features	375
11.2. Metabolism of propionic acid	376
11.3. Biochemical features	378
11.4. Molecular defect	380
11.5. Diagnosis	381
11.6. Genetics	381
11.7. Treatment	382
12. Methylmalonic acidemia	382
12.1. Clinical features	383
12.2. Metabolism of methylmalonic acid	384
12.3. Biochemical features	386
12.4. Molecular defect	387
12.5. Genetics	388
12.6. Treatment	388
12.7. Thiolase deficiency	389
13. β -Methylcrotonylglycinuria — multiple carboxylase deficiency	390
13.1. Clinical features	390
13.2. Metabolism of β -methylcrotonyl CoA	391
13.3. Biochemical features	392
13.4. Molecular defect	393
13.5. Genetics	394
13.6. Treatment	394
14. Disorders of the metabolism of sulfur-containing amino acids — homocystinuria	394
14.1. Clinical features	394
14.2. Metabolism of methionine and homocysteine	396
14.3. Biochemical features	397
14.4. Molecular defect	398
14.5. Genetics	399
14.6. Treatment	399
14.7. Differential diagnosis	400
15. Cystathioninuria	401
15.1. Clinical features	401
15.2. Metabolism of cystathionine	402
15.3. Biochemical findings	403
15.4. Molecular defect	403
15.5. Genetics	404
15.6. Treatment	404
16. Disorders of imino acid metabolism — hyperprolinemia; hydroxy- prolinemia	404
16.1. Clinical features	405
16.2. Metabolism of proline and hydroxyproline	406
16.3. Biochemical features	407
16.4. Molecular defect	408
16.5. Genetics	409
16.6. Treatment	409
17. Disorders of the urea cycle	409
17.1. Clinical features	409

17.2. Metabolism of the urea cycle	412
17.3. Biochemical features	414
17.4. Molecular defects	415
17.5. Diagnosis	416
17.6. Genetics	417
18. Pyroglutamic aciduria and related disorders	418
18.1. Clinical features	418
18.2. Metabolism of pyroglutamic acid	419
18.3. Biochemical features	421
18.4. Molecular defect	422
18.5. Genetics	423
18.6. Treatment	423
19. Other disorders of the γ -glutamyl cycle	423
19.1. Glutathione synthetase deficiency without pyroglutamic aciduria	423
19.2. γ -Glutamylcysteine synthetase deficiency	423
19.3. Glutathioninuria- γ -glutamyl transpeptidase deficiency	424
20. Sarcosinemia	424
20.1. Clinical features	424
20.2. Metabolism of sarcosine	425
20.3. Metabolic features	425
20.4. Molecular defect	426
20.5. Genetics	426
20.6. Treatment	426
21. Nonketonic hyperglycinemia	426
21.1. Clinical features	427
21.2. Metabolism of glycine	429
21.3. Biochemical features	432
21.4. Molecular defect	434
21.5. Diagnosis	436
21.6. Genetics	437
21.7. Treatment	437
