Table of Contents

Chapter 1 - Introduction 1

Chapter 2 - Shell Analysis 3
2.1 Geometry of Shells 3
2.2 Internal Forces 4
2.3 General Remarks 7

Chapter 3 - The HP Shell Element 9
3.1 General 9
3.2 The HP Shell Element 10
3.3 Assembly of Elements 17
3.4 Sectional Forces 17

Chapter 4 - Large Deformations of Shells 19
4.1 General 19
4.1.1 Bifurcation of Equilibrium 19
4.1.2 Limitation of Equilibrium 20
4.2 The Initial Stability Problem 20
4.3 General non-linear Deformation Path 24

Chapter 5 - Applications to Reinforced Concrete 26
5.1 Introduction of relevant Material Parameters 26
5.1.1 Disk Behavior 26
5.1.2 Plate Behavior 27
5.2 Changes in the Solution Method 28
5.2.1 Linear Static Analysis 28
5.2.2 Geometrically non-linear Analyses 28

Chapter 6 - Numerical Examples 29
6.1 Linear Analysis of a Cylindrical Vault 29
6.2 Linear Analysis of a Liquid Retaining Cylindrical Shell 36
6.3 Stability Load of a Rectangular Disk 41
6.4 Stability Load of a Bridge Arch 42
6.5 Stability Load of an Axially Loaded Perfect Cylinder 44
6.6 Snap-through Problem 45
6.7 Stability Load of a Cylinder with Imperfections 47

Chapter 7 - Conclusion 51
