

TRAFFIC FLOW AND TRANSPORTATION

PROCEEDINGS OF THE
FIFTH INTERNATIONAL SYMPOSIUM
ON THE THEORY OF
TRAFFIC FLOW AND TRANSPORTATION

Held at Berkeley, California, June 16-18, 1971

Edited by GORDON F. NEWELL

Professor of Transportation Engineering
University of California, Berkeley, California

AMERICAN ELSEVIER
PUBLISHING COMPANY, INC.

New York London Amsterdam

Contents

Preface	xiii
Robert Herman, Tenny Lam, and Richard Rothery	
The Starting Characteristics of Automobile Platoons	1
C. C. Wright	
Some Properties of the Fundamental Relations of Traffic Flow	19
James G. Bender, and Robert E. Fenton	
On Vehicle Longitudinal Dynamics	33
John N. Darroch and Richard Rothery	
Car Following and Spectral Analysis	47
Velibor Vidakovic	
A Study of Individual Journey Series: An Integrated Interpretation of the Transportation Process	57
C. G. B. Mitchell and J. M. Clark	
Modal Choice in Urban Areas	71
John W. Dickey	
Minimizing Economic Segregation Through Transit System Changes: A Goal Programming Approach	87
Martin J. Beckmann and Thomas F. Golob	
A Critique of Entropy and Gravity in Travel Forecasting	109
Tsuna Sasaki	
Estimation of Person Trip Patterns Through Markov Chains	119
I. Jeevanantham	
A New Look at the Traffic Assignment Problem	131
Maurice Netter	
Equilibrium and Marginal Cost Pricing on a Road Network with Several Traffic Flow Types	155
Sam Yagar	
A Study of the Travel Patterns in a Corridor with Reference to the Assign- ment Principles of Wardrop	165
Heinz Beilner and Friedrich Jacobs	
Probabilistic Aspects of Traffic Assignment	183
Tetsuzo Hoshino	
Theory of Traffic Assignment to a Road Network	195
Alan J. Miller	
Nine Estimators of Gap-Acceptance Parameters	215
Allan Marcus	
Theoretical Analysis of Expressway Ramp Merge Controls as Single-Server and Tandem Queues	237
Richard E. Allsop	
Sensitivity of Delay at a Fixed Time Traffic Signal to Small Errors in the Observations Used for Calculating the Signal Settings	253

Masaki Koshi	
On-Line Feedback Control of Offsets for Area Control of Traffic	269
Nathan Gartner	
Optimal Synchronization of Traffic Signal Networks by Dynamic Programming	281
Iwao Okutani	
Synchronization of Traffic Signals in a Network for Loss Minimizing Offsets	297
K. J. Noble and R. B. Potts	
Network Flow Model of the Australia-Europe Container Service	313
F. V. Webster and R. H. Oldfield	
A Theoretical Study of Bus and Car Travel in Central London	329
Bernard F. Byrne and Vukan R. Vuchic	
Public Transportation Line Positions and Headways for Minimum Cost . . .	347
P. H. Fargier and M. Cohen	
Study of a Collective Taxi System	361
M. W. Siddiquee	
Investigation of Sorting and Train Formation Schemes for a Railroad Hump Yard	377
J. C. Tanner	
A Strategic Model for Urban Transport Planning	389
Rodney J. Vaughan	
Decentralization: A Mathematical Explanation	405
Ezra Hauer	
Optimal Form of a Class of Collection-Distribution Networks	413
John G. Wardrop	
Minimum Cost Paths When the Cost Per Unit Length Depends on Location and Direction	429
C. Pearce, Pippa Simpson, and W. Venables	
Urban Density Models	439
