F' Centers in Alkali Halides

Springer-Verlag

Berlin Heidelberg New York London Paris Tokyo

CONTENTS

2. Historical Background	1
3. The F' Band	4
4. F-F' Conversion via the Conduction Band	7
4.1. F' Thermal Stability Range	10
4.2. Range of F' Thermal Instability	24
4.3. Band Theory Approach to the Thermal Ionization Rates	38
5. F' Luminescence?	39
5.1. Intracenter Quenching	45
5.2. F' Bound Excited Singlet?	47
5.3. Bound Polaron?	49
6. Pair Interactions between Color Center Species	51
6.1. F*- α Interactions	51
6.2. F*-F Interactions	58
6.2.1. Tunnel Produced F' Centers	62
6.2.1.1. Triplet F' Center?	76
6.2.2. Loose F Aggregates	78
6.3. F'- α Interactions	85
6.4. F*-F* Interactions	91
6.5. F*-F' Interactions	95
6.6. Pair Interactions near Room Temperature	96
6.6.1. Which Species are Mobile?	104
6.7. F'-M and Like Interactions	106
6.8. α -M and Like Interactions	108
6.9. F'-F Interchange	109
6.10. F'-V Interactions	110
6.11. F'-Exciton Interactions	113
7. Electron Spin Resonance	115
8. Production of F' Centers by X-Rays	115
9. F' Formation by Pulsed Radiolysis	118
10. F' Production by Photolysis	123
11. Thermally Stimulated Phenomena	123
12. F' Exoelectrons	134
13. Photomechanical Effects	137
14. Positron Annihilation at F' Centers	143
15. F' Muonics	148
16. F' Centers in the Presence of F Aggregate and Colloid Centers	149

17. F' Centers in Impure Alkali Halides	151
17.1. F' Centers in Crystals Doped with A-Type Univalent Cations	151
17.1.1. F _A ' Centers	151
17.1.2. Intermediate Perturbation	161
17.2. F' Centers in Crystals Containing Divalent Cationic Impurities	162
17.2.1. Intermediate Perturbation	162
17.2.2. Strong Perturbation	164
17.3. Quenching of the F-F' Conversion in Crystals Doped With Anionic Impurities	165
17.3.1. OH ⁻ Doping	165
18. Practical Applications of the F-F' Conversions	167
18.1. Calibration of Light Sources	167
18.2. Optical Information Storage	167
19. Theory	171
19.1. F-F' Conversion Quantum Efficiency	171
19.1.1. F* Thermal Ionization Rate	175
19.1.2. F* Radiationless Deexcitation Rate	181
19.1.3. F* Radiative Deexcitation Rate	183
19.2. Electron Trapping Rate by a Halide Vacancy	186
19.3. The F' Band	187
19.3.1. Continuum Approach	189
19.3.2. Semicontinuum Models	196
19.3.3. Point-Ion Models	205
19.3.4. Semi-Empirical Models	219
19.4. F' Thermal Ionization Rate	221
19.5. Bound-Polaron Theory of the F-F' Conversion	225
19.5.1. Nature of the Polaron State	226
19.5.2. F-F' Conversion in Dilute Systems	230
19.5.3. Electron-Exchange Matrix Element	234
19.5.4. F-F' Conversion in Densely Colored Crystals	242
19.5.5. Bound-Polaron Versus Conduction-Band F' Center Formation	246
20. F' Related Nonlinearities	247
20.1. Pekar's Trapping Coefficients	247
20.2. F' Yields	251
20.3. Speculative Nature of Nonlinearity	255
21. Prospects	257
Table I: F' Band Optical Energies	261
Table II: F' Thermal Lifetime	263
