

P. Schattschneider

*Fundamentals
of Inelastic
Electron
Scattering*

Springer-Verlag Wien New York

Contents

1.	Classical Scattering Theory	1
1.1	Elastic Cross Sections	1
1.2	The Deflection Function	4
1.3	Scattering on a Hard Sphere	5
1.4	The General Case	6
1.5	Rutherford Scattering	9
1.6	Singularities	9
1.7	Inelastic Cross Sections	10
1.8	The Ramsauer-Townsend Effect	12
1.9	On the Validity of the Classical Description	13
2.	Quantum Mechanical Scattering Theory	15
2.1	Absorption Edges	15
2.2	The Differential Cross Section	16
2.3	The Dynamic Form Factor	18
2.4	The Generalized Oscillator Strength	22
2.5	Rutherford Scattering	23
2.6	The Bethe Differential Cross Section	23
2.7	The Hydrogenic Approach	26
2.8	The Bethe Approximation	29
2.9	Zonal Harmonics Expansion	30
2.10	Qualitative Interpretation	32
2.11	The Total Elastic Cross Section	34
2.12	The Ramsauer-Townsend Effect	38
3.	Practical Aspects of Absorption Edge Spectroscopy	41
3.1	A Survey of Applications	41
3.2	Microanalysis	43
3.3	Electron Compton Scattering	47
3.4	Site-specific Excitations	50
3.5	Extended Energy Loss Fine Structure (EXELFS)	52

4.	Electrodynamics in Homogeneous, Isotropic Media	55
4.1	Fourier Transform	58
4.2	Linear Response of a Medium	60
4.3	The Maxwell Equations	62
4.4	The Dielectric Function	67
4.5	The Drude Model	68
4.6	Charge Oscillations in a Metal	71
5.	Some Details on Charge Oscillations	75
5.1	Screening	75
5.2	Plasmons	78
5.3	Plasmon Dispersion	80
5.4	Boundaries	82
5.5	Surface Oscillations	85
5.6	The ATR-Method	86
5.7	On the Restricted Validity of the Fresnel Equations	89
5.8	The Differential Cross Section	92
5.9	Energy Loss Function	95
6.	Quantum Mechanical Preliminaries	98
6.1	Summary of Important Facts	99
6.2	The Lippman-Schwinger Equation	101
6.3	The Green Operator	103
6.4	The Dyson Equation	105
6.5	Green Operators in the Time Domain	106
6.6	Relation of G_0 to the Time Evolution Operator	108
6.7	Second Quantization	109
6.8	Operators in Second Quantization	111
6.9	The Perturbation Series in Graphical Representation	114
6.10	An Example	116
6.11	The Coulomb Interaction	119

7. Quantum Mechanical Description of the Electron Gas	123
7.1 The Jellium Hamiltonian	123
7.2 Sommerfeld Non-interacting e^- -Gas	125
7.3 Hartree Approximation (HA)	127
7.4 Hartree-Fock Approximation (HFA)	130
7.5 Why Higher Order Perturbation Theory Does not Work	132
7.6 The Random Phase Approximation (RPA)	135
7.7 Electron Scattering	141
7.8 Polarization Diagrams	142
8. Beyond Simple Models	144
8.1 Solid State Effects	144
8.2 Ion-Electron Interactions	149
8.3 Multiple Scattering	152
