

Gesellschaft für Anlagen-
und Reaktorsicherheit
(GRS) mbH

Thermo-Hydro-
Mechanical and
Geochemical
Behaviour of the
Callovo-Oxfordian
Argillite and the
Opalinus Clay

Final Report

Chun-Liang Zhang
Tilmann Rothfuchs
Helge Moog
Jürgen Dittrich
Jürgen Müller

June 2004

Remark:

This report was prepared under contract No. 02 E 9541 with the Bundesministerium für Wirtschaft und Arbeit (BMWA).

The work was conducted by the Gesellschaft für Anlagen- und Reaktorsicherheit (GRS) mbH.

The authors are responsible for the content of this report.

Table of Contents

1	Introduction	1
1.1	Research Programme of the Bure Underground Laboratory	1
1.2	GRS Proposal for Contribution to the Bure Programme	2
1.3	Pre-Project for Participation in the Bure Programme	4
1.3.1	Objectives	4
1.3.2	Experimental Programme	4
1.3.3	Modelling Programme	5
2	Geotechnical Experiments	7
2.1	Sample Characterisation	7
2.1.1	Samples	7
2.1.2	Measurements of Petrophysical Properties.....	9
2.2	Long-Term Creep Experiments	14
2.2.1	Testing Method	14
2.2.2	Results	18
2.2.3	Conclusions and Remarks	24
2.3	Swelling Experiments	27
2.3.1	Theoretical Considerations	27
2.3.2	Swelling Pressure in Volume-Constraint Conditions	30
2.3.3	Uniaxial Swelling Pressure	32
2.3.4	Uniaxial Swelling, Shrinkage and Creep	35
2.4	Thermo-Hydro-Mechanical Experiments	37
2.4.1	Testing Devices	37
2.4.1.1	Oedometer	37
2.4.1.2	Triaxial Apparatus	39
2.4.2	Testing Procedure	41
2.4.3	Results of Hydro-Mechanical Tests	42
2.4.4	Results of Thermo-Hydro-Mechanical Tests	49
2.4.5	Discussions and Conclusions	55

3	Geochemical Experiments	57
3.1	Diffusion of Cs ⁺ , I ⁻ , and SeO ₄ ²⁻ in the Callovo-Oxfordian Argillite	57
3.1.1	Introduction	57
3.1.2	Materials and Methods	58
3.1.3	Data Processing	60
3.1.4	Results	61
3.2	Leaching of the Callovo-Oxfordian Argillite	62
3.2.1	Introduction	62
3.2.2	Materials and Methods	63
3.2.3	Results	64
4	Numerical Modelling	69
4.1	Theoretical Framework	69
4.1.1	Balance Equations	69
4.1.2	Equilibrium Restrictions	71
4.1.3	Constitutive Equations	71
4.1.3.1	Thermal Equations	71
4.1.3.2	Hydraulic Equations	72
4.1.3.3	Mechanical Equations	74
4.2	Material Parameters	78
4.2.1	Thermal Parameters	79
4.2.2	Hydraulic Parameters	79
4.2.3	Mechanical Parameters	83
4.3	Modelling of Normal Laboratory Experiments	87
4.3.1	Swelling Behaviour of Bentonite	87
4.3.1.1	Swelling Pressure	88
4.3.1.2	Swelling Strain	90
4.3.2	Consolidation and Collapse of Bentonite	91
4.3.3	Resaturation of Bentonite	94
4.3.4	Desaturation of Opalinus Clay	96
4.3.5	Response of Bentonite to Heating	97
4.3.5.1	Response of Unsaturated Bentonite to Heating	98

4.3.5.2	Response of Saturated Bentonite to Heating	100
4.4	Predictions of Large-Scale Laboratory Experiments	103
4.4.1	Ventilation of a Borehole in Clay	103
4.4.2	Response of Rock-Buffer-System to Heating	108
4.5	Calculations of Perturbations induced by Drift Excavation and Ventilation <i>in situ</i>	118
5	Summary	129
5.1	Laboratory Experiments	129
5.2	Numerical Modelling	132
5.3	Future Investigations	133
6	Acknowledgements	135
7	References	137
8	List of Figures	143
9	List of Tables	149
