STOCHASTIC POINT PROCESSES

AND THEIR APPLICATIONS

S. K. SRINIVASAN, M.Sc., Ph.D.
Professor of Applied Mathematics
Indian Institute of Technology
Madras

Monograph No. 34
Series Editor:
ALAN STUART

GRIFFIN LONDON

CONTENTS

Chapter

1 INTRODUCTION 1

1.1 Role of the theory of point processes 1
1.2 Stochastic processes 3
1.3 The Poisson process 7
1.4 The Yule–Furry process 9

2 GENERAL THEORY OF POINT PROCESSES 11

2.1 Introduction 11
2.2 Point processes: preliminary ideas and definitions 11
2.3 Counting measures and product densities 13
2.4 Generating functionals 17
2.5 Point processes on the real line: product densities and their extensions 21
2.6 Some examples 24
Problems 29

3 RENEWAL PROCESSES 31

3.1 Renewal theory 31
3.2 Renewal processes 33
3.3 The renewal equation and its ramifications 35
3.4 The counting process and processes derived from it 38
3.5 Censors: application to the theory of counters 43
3.6 Regenerative processes 45
3.7 Alternating renewal processes 47
3.8 Markov renewal processes 48
Problems 52

4 STATIONARY POINT PROCESSES 55

4.1 General definitions 55
4.2 Distribution functions and general identities 58
4.3 Dependence and correlation: generalized renewal and product densities 60

Chapter

4.4 Moment formulae 66
4.5 Some special point processes 70
Problems 76

5 DOUBLY STOCHASTIC POISSON PROCESSES 79
5.1 Introduction 79
5.2 Models with a purely discontinuous intensity 80
5.3 A model with continuous stochastic intensity 83
5.4 Self-exciting point processes 87
Problems 92
Appendix 95

6 MULTIVARIATE POINT PROCESSES 99
6.1 Introduction 99
6.2 General properties of bivariate processes 100
6.3 Intensity functions and generalized product densities 104
6.4 Interacting renewal processes 109
6.5 Examples 117
6.5.1 Theory of queues (single server system) 117
6.5.2 Theory of dams with infinite capacity 117
6.5.3 A reliability model 119
Problems 120

7 STATISTICAL PHYSICS 122
7.1 Introduction 122
7.2 Statistical physics of matter in equilibrium 123
7.3 Non-equilibrium statistical physics 126
7.4 Quantum statistics 129
7.4.1 Maxwell–Boltzmann statistics 130
7.4.2 Fermi–Dirac and Bose–Einstein statistics 131
7.4.3 Intermediate statistics 132

8 MANAGEMENT SCIENCE 134
8.1 Introduction 134
8.2 Single server queuing theory 134
8.3 Theory of inventories 141
8.4 Theory of dams 145
8.5 Reliability theory 147
Problems 151
Appendix 153

Chapter

9 POINT PROCESSES IN BIOLOGY 155

9.1 Introduction 155

9.2 Burst-time distribution of a cell 155

9.3 Age-dependent models for phage reproduction 159

9.4 Neurophysiology 163

References 169
