## Using Cointegration Analysis in Econometric Modelling

R. I. D. HARRIS University of Portsmouth

## PRENTICE HALL

LONDON • NEW YORK • TORONTO • SYDNEY • TOKYO • SINGAPORE MADRID • MEXICO CITY • MUNICH

## Contents

	Preface	ix
1	Introduction and overview	1
	Some initial concepts	2
	Data generating processes	2
	Role of the error term $u_t$ and statistical inference	5
	Outline of the book	5
2	Short- and long-run models	13
	Long-run models	13
	Stationary and non-stationary time series	14
	Spurious regressions	19
	Cointegration	22
	Short-run models	23
	Conclusion	25
3	Testing for unit roots	27
	The Dickey–Fuller test	28
	Augmented Dickey–Fuller test	32
	Power and level of unit root tests	39
	Structural breaks and unit root tests	40
	Seasonal unit roots	42
	Conclusion on unit root tests	47
4	Cointegration in single equations	52
	The Engle-Granger (EG) approach	52
	Alternative approaches	57

	Dynamic models	60
	Fully modified estimators	62
	Problems with the single equation approach	62
	Estimating the short-run dynamic model	66
	Seasonal cointegration	69
	Conclusions	72
5	Cointegration in multivariate systems	76
	The Johansen approach	77
	Testing the order of integration of the variables	. 79
	Formulation of the dynamic model	81
	Testing for reduced rank	86
	Deterministic components in the multivariate model	95
	Testing for weak exogeneity	98
	Testing for linear hypotheses on cointegration relations	104
	Testing for unique cointegration vectors	110
	Joint tests of restrictions of $\alpha$ and $\beta$	116
	Conclusions	117
6	Modelling the short-run and other extensions	125
	Introduction	125
	Estimating the long-run cointegration relationships	126
	Parsimonious VECM	133
	Conditional PVECM	134
	Structural modelling	136
	Some current issues and developments	139
AP	PENDIX Cointegration analysis using the Johansen technique: A	1/5
Ct.	practitioners guide to the software	145
Sialistical appenaix		133
nejerences Index		100
