

Edited by
Jürgen Popp, Valery V. Tuchin, Arthur Chiou,
and Stefan H. Heinemann

Handbook of Biophotonics

Vol. 1: Basics and Techniques

**WILEY-
VCH**

WILEY-VCH Verlag GmbH & Co. KGaA

Contents

Preface XV

List of Contributors XVII

1	Introduction to Biophotonics	1
	<i>Marion Jürgens, Thomas Mayerhöfer, and Jürgen Popp</i>	
1.1	Definition of and General Introduction to Biophotonics	1
1.1.1	Definition	1
1.1.2	Visions Connected with Biophotonics Research	2
1.1.3	Why Photons?	4
1.1.4	Fields of Application and Technology	5
1.1.5	Societal Relevance of Biophotonics	9
1.1.5.1	Fighting Prevalent and Severe Diseases	9
1.1.5.2	Unmet Medical Needs in Third World Countries	13
1.1.6	Economic Impact of Biophotonics	14
1.2	Worldwide Research Activities in Biophotonics	15
1.2.1	Biophotonics – a Cross-Disciplinary Science	15
1.2.2	Scientific Landscape	17
1.2.2.1	International Conferences	17
1.2.2.2	Scientific and Trade Journals	18
1.2.2.3	Networks and Funding Programs	18
1.2.3	Current Research Trends and Future Goals	23
1.2.3.1	Photonic Methods for Biomedical Research	23
1.2.3.2	Photonic Methods for Point-of-Care Diagnostics	26
1.2.3.3	Photonic Methods for Clinical Imaging	28
1.2.3.4	Photonic Methods for Therapeutic Applications	31
1.2.3.5	Photonics in Pharmaceuticals, Bioanalysis, and Environmental Research	32
1.3	The Biophotonics4Life Worldwide Consortium	33
	<i>Gabriela Lee, Dennis L. Matthews, Jürgen Popp, and Brian C. Wilson</i>	
1.3.1	Mission and Purpose of the Biophotonics4Life Worldwide Consortium	33

1.3.2	History and Organization of the Consortium	33
1.3.3	Node Leaders for the Consortium	34
1.3.4	Current Activities of the BP4Life Consortium	35
1.3.5	Medical Fellows	36
1.3.6	Anticipated Role of Industry	37
1.3.7	Potential Future Activities of the Consortium	37
	References	38

2 Short Introduction to Atomic and Molecular Configuration 39

Dirk Bender, Leticia González, and Stefanie Gräfe

2.1	Introduction	39
2.2	Basics of Quantum Mechanics	40
2.2.1	Wavefunctions and Operators	41
2.2.2	Particle in a Box	47
2.2.3	Harmonic Oscillator – Vibrations	50
2.2.4	Particle on a Sphere, Rigid Rotor – Rotations	53
2.2.5	The Hydrogen Atom	55
2.3	Approximations	57
2.3.1	Variational Principle	57
2.3.2	Perturbation Theory	57
2.3.3	Born–Oppenheimer Approximation	58
2.3.4	Linear Combination of Atomic Orbitals	60
2.4	Solving the Electronic Schrödinger Equation	61
2.5	The Hartree–Fock Method	63
2.6	Basis Sets	64
2.6.1	Slater Versus Gaussian Functions	65
2.6.2	Number of Basis Functions	66
2.6.3	Contracted Basis Sets	68
2.7	Electron Correlation	70
2.7.1	Configuration Interaction	73
2.7.2	Coupled Cluster Method	75
2.7.3	Multi-Configurational Self-Consistent Field Theory	76
2.7.4	Møller–Plesset Perturbation Theory	77
2.8	Density Functional Theory	78
2.8.1	The Hohenberg–Kohn Theorems	79
2.8.2	The Kohn–Sham Approach	80
2.8.2.1	Advantages	81
2.8.2.2	Disadvantages	81
2.8.3	Time-Dependent Density Functional Theory	81
2.9	Semiempirical Methods	83

2.10	Force Field Methods	85
	References	86
3	Light–Matter Interaction	87
	<i>Michael Schmitt, Thomas Mayerhöfer, and Jürgen Popp</i>	
3.1	Electrical Properties of Matter	87
3.1.1	Polar Molecules	88
3.1.2	Induced Dipole moments by External Electrical Fields	89
3.2	Classical Dispersion Theory	92
3.3	Electromagnetic Waves in Matter	99
3.4	Absorption of Light	104
3.5	Reflection and Transmission	112
3.5.1	Diffuse Reflection	123
3.5.2	Layered Media	124
3.5.3	Anisotropic Media	124
3.5.4	Inhomogeneous Media	128
3.6	Nonlinear Optics	129
3.6.1	Nonlinear Polarization	129
3.6.2	$\chi^{(2)}$ Processes	133
3.6.3	$\chi^{(3)}$ Processes	140
3.6.3.1	Optical Kerr Effect	142
3.6.3.2	Two-Photon Absorption	144
3.6.3.3	Other $\chi^{(3)}$ Processes	146
3.7	Lasers	148
3.7.1	Mode Locking	153
3.8	Infrared Spectroscopy	157
3.9	UV–Vis Spectroscopy	167
3.9.1	Electronic Selection Rules	172
3.10	Polarimetry, Optical Rotatory Dispersion, Circular Dichroism	177
3.10.1	Polarimetry	178
3.10.2	Optical Rotatory Dispersion (ORD)	179
3.10.3	Circular Dichroism (CD)	181
3.11	Fluorescence	182
3.11.1	The Fate of Electronically Excited States	183
3.11.2	Basic Concepts of Fluorescence Spectroscopy	187
3.11.3	Nonradiative Energy Transfer	192
3.11.3.1	Förster Resonance Energy Transfer (FRET)	194
3.11.4	Photobleaching	198
3.11.5	Multi-Photon Excited Fluorescence	199
3.11.6	Fluorescence Nanoscopy	200
3.11.6.1	Stimulated Emission Depletion Microscopy (STED)	203
3.11.6.2	Photoactivated Localization Microscopy (PALM) and Stochastic Optical Reconstruction Microscopy (STORM)	205
3.12	Elastic Light Scattering	207

3.13	Inelastic Light Scattering (Raman Scattering)	210
3.13.1	Theoretical Description of Inelastic Light Scattering	211
3.13.2	Resonance Raman Scattering (RRS)	217
3.13.3	Surface-enhanced Raman Spectroscopy (SERS)	221
3.13.4	Hyper-Raman Effect	226
3.13.5	Coherent Raman Spectroscopy	227
3.13.5.1	Coherent Anti-Stokes Raman Spectroscopy (CARS)	228
3.13.5.2	Stimulated Stokes- and Anti-Stokes Raman Scattering	241
	References	246
	Appendix 3.A Fluorescence Labeling Strategies for Proteins	247
	<i>Inge Kleppe and Klaus Weisshart</i>	
3.A.1	Introduction	247
3.A.2	General Labeling Strategies for Organelles and Biomacromolecules	248
3.A.3	Protein Labeling Strategies	250
3.A.4	Direct Labeling Strategies for Fixed Cells and Solution	250
3.A.5	Indirect Labeling Strategies for Fixed Cells and Solution	253
3.A.6	Direct Labeling Strategies for <i>In Vivo</i> Studies with Autofluorescent Proteins	256
3.A.7	Indirect Labeling Strategies for <i>In Vivo</i> Studies Using Self-Labeling Protein Tags	259
3.A.8	Prospects	260
	Appendix References	260
4	Light Sources	263
	<i>Rainer Riesenberger and Andreas Wutting</i>	
4.1	Introduction	263
4.2	Brief Review of Light Properties	263
4.2.1	Spectrum	263
4.2.2	Radiometric Properties and Beam Parameter Product	265
4.2.2.1	Diffuse Sources	266
4.2.2.2	Nondiffuse Sources	267
4.2.3	Coherence	267
4.2.3.1	Temporal Coherence	268
4.2.3.2	Spatial Coherence	269
4.2.4	Polarization	271
4.3	Light Generation and Light Sources	273
4.3.1	Processes of Light Generation	273
4.3.1.1	General Emission Processes	273
4.3.1.2	Laser Emission	276
4.3.2	Thermal Sources	280
4.3.2.1	Tungsten Filament Lamps	280
4.3.2.2	Halogen Lamps	281
4.3.3	Low-Pressure Gas Discharge Lamps	281
4.3.3.1	Cold Cathode Fluorescent Lamps and Spectral Lamps	282

- 4.3.3.2 Energy-Saving Lamps 283
- 4.3.3.3 Hollow-Cathode Lamps 283
- 4.3.3.4 Hydrogen and Deuterium Lamps 284
- 4.3.4 High-Pressure Gas Discharge Lamps 284
- 4.3.4.1 Short Arc Lamps/High-Intensity Discharge (HID) Lamps 284
- 4.3.4.2 Other High-Pressure Gas Discharge Lamps 285
- 4.3.4.3 Gas Lasers 287
- 4.3.5 Light-Emitting Diodes (LEDs) 288
- 4.3.5.1 Laser Diodes 290
- 4.3.5.2 Optically Pumped Semiconductor Lasers 293
- 4.3.5.3 Other Sources 293
- References 294

- 5 Optical Detectors 297**
Rainer Riesenberg and Andreas Wuttig
- 5.1 Introduction 297
- 5.2 Devices for Light Detection 297
- 5.2.1 Sensitivity and Detectivity of Light Detectors 297
- 5.2.1.1 Responsivity 297
- 5.2.1.2 Noise, Sensitivity, and Detectivity 298
- 5.2.2 Light Detection Through Thermal Effects/Thermal Detectors 299
- 5.2.3 Light Detection Using the Photoelectric Effect 299
- 5.2.3.1 Phototube 299
- 5.2.3.2 Photomultiplier 299
- 5.2.4 Light Detection Using Internal Photoelectric Effects 300
- 5.2.4.1 Photoconductor 300
- 5.2.4.2 Photodiode 302
- 5.2.4.3 PIN Photodiode 305
- 5.2.4.4 Pinned Photodiode 307
- 5.2.4.5 Avalanche Photodiode 309
- 5.2.4.6 Metal-Semiconductor-Metal (MSM) Photodetectors 310
- 5.2.4.7 Phototransistor 311
- 5.2.4.8 Remarks on the Sensitivity of Semiconducting Light Detectors With and Without Internal Gain Mechanisms 311
- 5.2.5 Noise of Semiconducting Photodetectors 312
- 5.2.5.1 Dark Current Noise 312
- 5.2.5.2 Nyquist-Johnson Noise 313
- 5.2.5.3 Flicker Noise and $1/f$ Noise 313
- 5.2.5.4 Excess Noise 314
- 5.2.5.5 Read Noise 314
- 5.3 Image Detectors 315
- 5.3.1 Pixel-Based Image Detectors 315
- 5.3.1.1 Pixel Number, Pixel Pitch and Nyquist Frequency 315
- 5.3.1.2 Pixel Geometry and Spatial Pixel Response 316
- 5.3.1.3 Image Acquisition Timing 317

5.3.2	Charge-Coupled Devices (CCDs)	322
5.3.2.1	General Principle of CCD Operation	322
5.3.2.2	Full Well Capacity and Blooming	324
5.3.2.3	Charge Transfer and Electronic Shutter Capabilities	325
5.3.2.4	Charge Readout	327
5.3.2.5	Binning and Windowing	328
5.3.2.6	Charge-Transfer Efficiency (CTE) and Buried Channel CCD	329
5.3.2.7	Multi-Pinned Phase (MPP)	330
5.3.2.8	Back Side Thinning and Back Illumination	331
5.3.2.9	Etaloning at Long Wavelengths and Deep Depletion CCDs	333
5.3.3	Photodiode Arrays (PDAs), Active Pixel Sensors (APsSs/CMOS), and IR Focal Plane Arrays (FPAs)	334
5.3.3.1	Plain Photodiode Arrays and Focal Plane Arrays	335
5.3.3.2	CMOS Image Detectors/Active Pixel Sensors	336
5.3.3.3	Double Sampling and Correlated Double Sampling (CDS) in APS Imagers	338
5.3.3.4	Exposure Integration Schemes	339
5.3.3.5	Electronic Shutter Modes	341
5.3.3.6	Back-Side Thinning of CMOS Image Detectors	342
	References	342
6	Instruments in Biotechnology and Medicine	345
	<i>Andreas Voss, Karl-Heinz Feller, and Dieter Beckmann</i>	
6.1	Photonic Instruments in Medicine	345
6.1.1	Introduction	345
6.1.1.1	Optical Window of Cells and Tissues	345
6.1.1.2	Laser Light–Matter Interaction as a Function of Intensity	346
6.1.1.3	Photochemical Treatment of Tissues	346
6.1.1.4	Thermal Processes in Light–Matter Interaction	348
6.1.1.5	Nonlinear Processes in Light–Matter Interaction (Not to Be Confused with Nonlinear Optics)	350
6.1.2	Minimally Invasive Diagnostics – Endoscopy	351
6.1.2.1	History	351
6.1.2.2	Types and Components of Endoscopes	352
6.1.2.3	Advantages and Disadvantages of Endoscopy	362
6.1.2.4	Application Fields	363
6.1.2.5	Combination of Standard White Light Endoscopic with Other Diagnostic Methods	363
6.1.2.6	Some Trends in Endoscopy	369
6.1.3	Noninvasive Diagnostics – Photoplethysmography	372
6.1.3.1	Introduction	372
6.1.3.2	Characterization of the PPG Signal	372
6.1.3.3	Signal Acquisition	373
6.1.3.4	Clinical Applications	374
6.1.3.5	Summary	381

- 6.1.4 Noninvasive Diagnostics – Ophthalmology 381
 - 6.1.4.1 Introduction 381
 - 6.1.4.2 Corneal Topography 383
 - 6.1.4.3 Perimetry 385
 - 6.1.4.4 Optical Biometry 389
 - 6.1.4.5 Retinal Imaging and Glaucoma Diagnostics 391
 - 6.1.4.6 Fluorescein Angiography 399
 - 6.1.4.7 Wavefront Analysis 402
- 6.1.5 *In Vitro* Diagnostics – Microscopy 404
 - 6.1.5.1 Light Microscope 406
 - 6.1.5.2 Fluorescence Microscope 406
 - 6.1.5.3 New Fluorescence Microscope Techniques 408
 - 6.1.5.4 Confocal Microscopy 411
 - 6.1.5.5 Raman Microscopy 414
- 6.1.6 *In Vitro* Diagnostics – Digital Slides and Virtual Microscopy 416
- 6.1.7 *In Vitro* Diagnostics – Optical Methods in Clinical Analysis System 417
 - 6.1.7.1 Optical Spectroscopy of Blood and Urine Components 417
 - 6.1.7.2 Optical Spectroscopy of Tissues and Vessels 417
 - 6.1.7.3 Optical Spectroscopy of Agglutination and Precipitation – Nephelometry, Turbidimetry 423
- 6.1.8 *In Vitro* Diagnostics – Blood Gas Pressure Measurements 427
 - 6.1.8.1 Optical Detection of pO_2 in Blood 427
 - 6.1.8.2 Optical Detection of pCO_2 in Blood 429
 - 6.1.8.3 Optical Detection of Further Monitoring Parameters in Intensive Care (Temperature, pH) 429
- 6.1.9 *In Vitro* Diagnostics – Photoacoustic Spectroscopy 430
- 6.1.10 Therapy 431
 - 6.1.10.1 Introduction 431
 - 6.1.10.2 Laser Therapy in Ophthalmology – LASIK (Refraction Correction by Cornea Treatment) 432
- 6.2 Photonic Instruments in Biotechnology 433
 - 6.2.1 Introduction 433
 - 6.2.2 Selected Analytical Methods 437
 - 6.2.2.1 Introduction 437
 - 6.2.2.2 Reflectometric Interference Spectroscopy (RIFS) 438
 - 6.2.2.3 Surface Plasmon Resonance (SPR) 439
 - 6.2.2.4 Fluorescence Methods 440
 - 6.2.2.5 Advanced Microscopic Techniques (Selection) 444
 - 6.2.2.6 Enzyme-Linked Immunosorbent Assay (ELISA) 450
 - 6.2.2.7 Optical Biosensors, Biochips, Miniaturized Analytical Systems 451
 - 6.2.2.8 High-Throughput Screening (HTS) 458
 - 6.2.3 Sample Preparation: Flow Injection Analysis 458
 - 6.2.4 Fermentation as a Central Process of Biotechnology 460
 - 6.2.4.1 General Aspects 460
 - 6.2.4.2 Fermentation Control 463

6.2.4.3	Photobioreactors	464
6.2.5	Optical Trap/Optical Tweezers	465
6.2.5.1	Basic Scheme of Laser Tweezers and Micromanipulation	466
6.2.5.2	Applications of Optical Tweezers	467
	References	470

7 **Biology** 489

Stefan H. Heinemann, Roland Schönherr, and Toshinori Hoshi

7.1	Biomolecules: Building Blocks of Living Matter	491
7.1.1	Nucleic Acids: Storage of Genetic Information	492
7.1.1.1	Structure	496
7.1.1.2	Enzymes for DNA and RNA processing	498
7.1.1.3	Mutations, Damage and Repair of DNA	501
7.1.1.4	UV Absorption and Fluorescent Nucleic Acids	502
7.1.2	Proteins: Scaffolds and Molecular Machines	503
7.1.2.1	Amino Acids	503
7.1.2.2	Protein Translation – the Standard Genetic Code	506
7.1.2.3	Peptide Bonds, Polymerization, and Secondary Structure	508
7.1.2.4	Tertiary and Quaternary Protein Structure	511
7.1.2.5	Post-translational Modifications: Dynamics of Protein Structure and Function	514
7.1.2.6	Noncovalent Structural Regulation	517
7.1.2.7	UV Absorption and Fluorescence of Proteins	517
7.1.3	Carbohydrates: Energy Storage and Structural Elements	518
7.1.3.1	Sugars, Monosaccharides, and Polysaccharides	519
7.1.3.2	Glycosylation of Proteins and Lipids	522
7.1.4	Lipids and Membranes	523
7.1.4.1	Lipids: Fatty Acids and Head Groups	523
7.1.4.2	Formation of Membranes and Vesicles	525
7.1.4.3	Lipids as Signaling Molecules	527
7.1.4.4	Interaction of Lipids with Light	527
7.1.5	Special-Purpose Proteins: Cofactors and Prosthetic Groups	527
7.1.5.1	Opsins Exemplified by Rhodopsin	528
7.1.5.2	Porphyrin Proteins	529
7.1.5.3	Living Colors: Fluorescent and Phosphorescent Proteins	530
7.1.6	Low Molecular Weight Molecules	532
7.1.6.1	Adenosine Phosphates	532
7.1.6.2	Nicotinamide Adenine Dinucleotide	532
7.1.6.3	Glutathione	533
7.2	Cells	533
7.2.1	Compartments of a Human Cell	533
7.2.1.1	The Plasma Membrane and Its Transport Proteins	535
7.2.1.2	The Nucleus	539
7.2.1.3	Endoplasmic Reticulum (ER)	542
7.2.1.4	The Golgi Complex	546

7.2.1.5	Mitochondria are the “Power Plants” of the Cell	548
7.2.1.6	Peroxisomes	551
7.2.1.7	Lysosomes	552
7.2.1.8	The Cytoskeleton	554
7.2.1.9	Transport Vesicles, Exocytosis and Endocytosis	558
7.2.2	The Differentiated Cell	561
7.2.2.1	Cell Lineage and Tissue Types	561
7.2.2.2	Blood Cells	563
7.2.2.3	Cell Contacts and Extracellular Matrix	566
7.2.2.4	Epithelial Cells	571
7.2.2.5	Nerve Cells and Glial Cells	574
7.2.2.6	Muscle Cells	577
7.2.3	The Biological Diversity of Cells	579
7.2.3.1	Biological Diversity and Taxonomy	579
7.2.3.2	Plant Cells	582
7.2.3.3	Bacterial Cells	585
7.3	Cell Signaling	589
7.3.1	Electrical and Rapid Chemical Signaling	590
7.3.1.1	Ions and Membrane Potential	590
7.3.1.2	Action Potentials – Coding of Information	592
7.3.1.3	Ion Channels, Transporters and Pumps	595
7.3.1.4	Synapses and Chemical Signaling	598
7.3.2	Ligands, Receptors and Second Messengers	602
7.3.2.1	Second Messengers	603
7.3.2.2	G Protein-Coupled Receptors	608
7.3.3	Receptor Kinases, Hormones, and Transcription Regulation	610
7.3.3.1	Receptor Tyrosine Kinases	611
7.3.3.2	Small G Proteins – Intracellular Bimodal Switches	612
7.3.3.3	Mitogen-Activated Protein Kinase	613
7.3.3.4	Nuclear Receptors	614
7.3.3.5	Gene Regulation	615
7.3.4	Signaling Pathways	616
7.4	Some Examples of Diseases	618
7.4.1	Cancer – Loss of Proliferation Control	618
7.4.1.1	Cell Division	618
7.4.1.2	Cell Death	621
7.4.1.3	Cancer – Diagnosis and Therapy	623
7.4.2	Cardiovascular Disease	628
7.4.3	Malfunction of the Immune System	631
7.4.3.1	Immune Cells and Their Functions	632
7.4.3.2	Adaptive Immune Response	633
7.4.3.3	Failure of the Immune System	635
7.4.4	Infectious Diseases	638
7.4.4.1	Bacterial Infection	639
7.4.4.2	Viral Infection	641

7.4.5	Degenerative Diseases Exemplified by Neurodegenerative Diseases	642
7.4.6	Diabetes: Malfunction of Blood Sugar Regulation	645
7.4.7	Personalized Medicine and Outlook	647
