Preface

THE BACKGROUND TO DECISION

- 1 *Introduction* 1
- 2 *Motivation for selection* 8
 - 2.1 A new product 8
 - 2.2 Product development 13
 - 2.3 Problem situations 14
 - 2.4 Constraints to choice 15
- 3 *Cost basis for selection* 17
 - 3.1 Cost-effectiveness and value analysis 18
 - 3.2 Analysis of cost 19
- 4 *Establishment of service requirements and failure analysis* 30
 - 4.1 Selection and design in relation to anticipated service 30
 - 4.2 The causes of failure in service 31
 - 4.3 The mechanisms of failure 32
 - 4.4 Corrosion 35
- 5 *Specifications and quality control* 37
 - 5.1 The role of standard specifications 37
 - 5.2 Inspection and quality control 41

SELECTION FOR MECHANICAL PROPERTIES

- 6 *Static strength* 45
 - 6.1 The strength of metals 45
 - 6.2 The strength of thermoplastics 56
 - 6.3 The strength of fibre-reinforced composites 59
 - 6.4 Cement and concrete 63
 - 6.5 The strength of wood 68
 - 6.6 Materials selection criteria for static strength 70

vi Contents

- 7 *Toughness* 73
 - 7.1 The meaning of toughness 74
 - 7.2 The assessment of toughness 76
 - 7.3 Fracture mechanics 78
 - 7.4 General yielding fracture mechanics 83
 - 7.5 Toughness in polymers and adhesives 83
 - 7.6 Materials selection for toughness 84
- 8 *Stiffness* 90
 - 8.1 The importance of stiffness 90
 - 8.2 The stiffness of materials 93
 - 8.3 The stiffness of sections 95
 - 8.4 Materials selection criteria for stiffness 100
 - 8.5 Comparison of materials selection criteria 102
- 9 *Fatigue* 103
 - 9.1 Micromechanisms of fatigue in metals 104
 - 9.2 The assessment of fatigue resistance 106
 - 9.3 Factors influencing fatigue of metals 114
 - 9.4 Fatigue of non-metallic materials 118
 - 9.5 Materials selection for fatigue resistance 122
- 10 *Creep and temperature resistance* 125
 - 10.1 The evaluation of creep 125
 - 10.2 The nature of creep 132
 - 10.3 The development of creep-resisting alloys 135
 - 10.4 The service temperatures of engineering materials 140
 - 10.5 The selection of materials for creep resistance 148
 - 10.6 Deformation mechanism diagrams 149

SELECTION FOR SURFACE DURABILITY

- 11 *Selection for corrosion resistance* 153
 - 11.1 The nature of the corrosion process 153
 - 11.2 The selection of materials for resistance to atmospheric corrosion 163
 - 11.3 The selection of materials for resistance to oxidation at elevated temperatures 165
 - 11.4 The selection of materials for resistance to corrosion in the soil 166
 - 11.5 The selection of materials for resistance to corrosion in water 169
 - 11.6 The selection of materials for chemical plant 173
 - 11.7 The degradation of polymeric materials 181
- 12 *Selection of materials for resistance to wear* 184
 - 12.1 The mechanisms of wear 184
 - 12.2 The effect of environment on wear 186
 - 12.3 Surface treatment to reduce wear 186
 - 12.4 Erosive wear 188
 - 12.5 Selection of materials for resistance to erosive wear 189

- 13 *The relationship between materials selection and materials processing* 191
 - 13.1 The purpose of material processing 192
 - 13.2 The background to process selection 195
 - 13.3 The casting of metals and alloys 200
 - 13.4 Wrought products 203
 - 13.5 The processing of polymers 204
 - 13.6 Fabrication from powder 206
 - 13.7 Fastening and joining 209

14 *The formalization of selection procedures* 222

CASE STUDIES IN MATERIALS SELECTION

- 15 *Materials for airframes* 233
 - 15.1 Principal characteristics of aircraft structures 236
 - 15.2 Property requirements of aircraft structures 237
 - 15.3 Requirements for high-speed flight 246
 - 15.4 Candidate materials for aircraft structures 247
- 16 *Materials for ship structures* 264
 - 16.1 The ship girder 265
 - 16.2 Factors influencing materials selection for ship hulls 267
 - 16.3 Materials of construction 272
- 17 *Materials for engines and power generation* 277
 - 17.1 Internal combustion 279
 - 17.2 External combustion 291
- 18 *Materials for automobile structures* 298
 - 18.1 The use of steel 298
 - 18.2 The introduction of polymer composites 299
 - 18.3 Aluminium and its alloys 303
 - 18.4 Corrosion damage to automobiles 304
 - 18.5 Surface treatment of steel for car bodies 304
 - 18.6 Future trends in body construction and materials 305
 - 18.7 Exhaust systems 306
- 19 *Materials for bearings* 309
 - 19.1 Rolling bearings 309
 - 19.2 Plain bearings 310
- 20 *Investigative case studies* 314
 - 20.1 Electric chain saw (Black & Decker Ltd.) 314
 - 20.2 The Sturmey Archer gear (Derby International Corporation.) 319
 - 20.3 High-power gridded tube (English Electric Valve Co. Ltd.) 325
