# Contents

<b>Statistical Tables</b>	<b>xxix</b>
<b>Chapter 1 Introduction</b>	<b>1</b>
1.1 The Nature of Econometrics	1
1.2 The Search for Quantitative Economic Knowledge	2
1.2.1 Postulation	2
1.2.2 Experimentation	3
1.3 The Nonexperimental Model Building Restriction	4
1.4 Objectives of the Chapters Ahead	5
1.5 Organization of the Book	6
<b>Part 1 Foundations: Statistical Model Specification, Estimation, and Inference</b>	<b>9</b>
<b>Chapter 2 Analysis of a Sample of Data</b>	<b>11</b>
2.1 Introduction	11
2.2 Sampling, the Sample Space, and Random Variables	11
2.2.1 Random Variables and Probability Density Function	12
2.2.2 Mean and Variance	15
2.3 The Linear Statistical Model for Estimating the Mean and Variance of a Random Variable	17
2.4 Estimator for the Mean of a Random Variable	24
2.5 The Sampling Theory Approach to Inference	26
2.6 Estimator for the Variance of a Random Variable	30
2.7 Monte Carlo Experiments For the Linear Statistical Model For the Mean	32
2.8 Large Sample Properties of the Least Squares Estimator of the Mean	34
2.9 Summary	35
2.10 Exercises	35
2.10.1 Individual Exercises	36
2.10.2 Group Class Exercises	36
2.11 References	37

<b>Chapter 3</b>	<b>Analysis of a Sample from a Normal Population</b>	<b>38</b>
3.1	The Normal Linear Statistical Model	38
3.2	The Maximum Likelihood Approach to Estimation	40
3.3	The Sampling Distribution of the Estimator of $\beta$	43
3.3.1	Theoretical	43
3.3.2	Empirical	43
3.4	The Sampling Distribution of the Estimator of $\sigma^2$	45
3.4.1	Theoretical	45
3.4.2	Empirical	46
3.5	The Cramér–Rao Lower Bound	47
3.6	Summary	50
3.7	Exercises	51
3.7.1	Individual Exercises	51
3.7.2	Group or Class Exercises	51
3.7.3	Algebraic Exercises	52
3.8	References	53
<b>Chapter 4</b>	<b>Interval Estimation and Hypothesis Testing in the Normal Linear Model</b>	<b>54</b>
4.1	Introduction	54
4.2	Interval Estimation of the Mean	54
4.2.1	Interval Estimation of $\beta$ when $\sigma^2$ is Known	54
4.2.2	Interval Estimation of $\beta$ when $\sigma^2$ is Not Known	56
4.3	An Interval Estimator for $\sigma^2$	59
4.4	Hypothesis Tests about the Unknown Mean of a Population	60
4.4.1	Likelihood Ratio Tests	60
4.4.2	The Likelihood Ratio Test for the Mean of a Normal Population when $\sigma^2$ is Not Known	65
4.5	The Likelihood Ratio Test for the Variance of a Normal Population	67
4.6	Summary	68
4.7	Exercises	69
4.7.1	Individual Exercises	69
4.7.2	Group Class Exercises	70
4.7.3	Algebraic Exercises	70
4.8	References	70

<b>Chapter 5</b>	<b>The Bayesian Approach to Estimating the Mean and Variance of a Normal Population</b>	<b>72</b>
5.1	Bayesian Inference and Bayes' Theorem	72
5.2	Prior Distributions for the Mean and Variance	74
5.2.1	A Noninformative Prior	74
5.2.2	An Informative Prior	76
5.2.2a	The Gamma Function	78
5.2.2b	Sufficient Statistics	79
5.2.3	An Example of an Informative Prior Density	79
5.3	Posterior Distributions	82
5.3.1	Joint Posterior Density from a Noninformative Prior	83
5.3.2	Joint Posterior Density from an Informative Prior	84
5.4	Marginal Distributions for the Mean and Variance	84
5.4.1	The Example Continued	88
5.5	Loss Functions and Bayesian Point Estimates	90
5.5.1	The Bayesian Point Estimator for a Quadratic Loss Function	90
5.5.2	The Bayesian Point Estimator for a Linear Loss Function	91
5.5.3	A Relationship Between Bayesian and Sampling Theory Estimators	92
5.6	Hypothesis Testing and Interval Estimation	95
5.6.1	Interval Estimation	95
5.6.2	Hypothesis Testing	98
5.7	Summary	102
5.8	Exercises	103
5.8.1	General Exercises	103
5.8.2	Exercises Using Monte Carlo Data	103
5.9	References	105
<b>Part 2</b>	<b>The General Linear Statistical Model</b>	<b>107</b>
<b>Chapter 6</b>	<b>The General Linear Statistical Model</b>	<b>109</b>
6.1	Specification of the Statistical Model	110
6.1.1	The Error Vector	112
6.1.2	The Sampling Process	112
6.1.3	The Statistical Model	113

6.1.4	An Example	115
6.1.5	A Critique of the Model	116
<b>6.2</b>	<b>Point Estimation</b>	<b>118</b>
6.2.1	Estimating the $\beta$ Vector	120
6.2.2	The Least Squares Criterion	120
6.2.3	Minimizing the Quadratic Form	122
6.2.4	On Solving a System of Linear Equations	124
6.2.5	The Least Squares Rule	127
6.2.6	An Example	127
<b>6.3</b>	<b>Sampling Properties of the Least Squares Rule</b>	<b>133</b>
6.3.1	The Mean of the Least Squares Estimator	133
6.3.2	The Covariance Matrix	134
<b>6.4</b>	<b>Sampling Performance—The Gauss–Markov Result</b>	<b>136</b>
<b>6.5</b>	<b>Estimating the Scalar <math>\sigma^2</math></b>	<b>139</b>
6.5.1	Estimating the Covariance Matrix for $\mathbf{b}$	142
<b>6.6</b>	<b>Prediction and Degree of Explanation</b>	<b>143</b>
6.6.1	Prediction	143
6.6.2	An Example	145
6.6.3	Degree of Explanation	145
<b>6.7</b>	<b>A Monte Carlo Experiment to Demonstrate the Sampling Performance of the Least Squares Estimator</b>	<b>148</b>
6.7.1	The Sampling Experiment	148
6.7.2	The Sampling Results	150
<b>6.8</b>	<b>Some Concluding Remarks</b>	<b>153</b>
<b>6.9</b>	<b>Exercises</b>	<b>154</b>
6.9.1	Individual Exercises	155
6.9.2	Group or Class Exercises	155
6.9.3	Other Exercises	155
<b>6.10</b>	<b>References</b>	<b>157</b>

**Chapter 7 The Normal General Linear Statistical Model 159**

<b>7.1</b>	<b>Maximum Likelihood Estimator</b>	<b>159</b>
7.1.1	Analytical Representation of the Sample Information	159
7.1.2	The Criterion	160
7.1.3	The Maximum Likelihood Estimator	161
7.1.3a	Maximum Likelihood Estimator for $\beta$	161

	7.1.3b	Maximum Likelihood Estimator for $\sigma^2$	163
	7.1.3c	Distribution of the Quadratic Form $\mathbf{e}'(I_T - X(X'X)^{-1}X')\mathbf{e}$	164
	7.1.4	Sampling Performance of $\hat{\boldsymbol{\beta}}$ and $\hat{\sigma}^2$	168
	7.1.5	Summary Statement	169
	7.1.6	A Sampling Experiment	170
	7.1.6a	The Sampling Results	171
<b>7.2</b>		Interval Estimation	174
	7.2.1	The Coefficient Vector for the Orthonormal Case	174
	7.2.1a	Single Coefficient	175
	7.2.1b	Two or More Coefficients Jointly	177
	7.2.2	General Case	180
	7.2.2a	Single Linear Combination of the $\boldsymbol{\beta}$ Vector	180
	7.2.2b	Two or More Linear Combinations of the $\boldsymbol{\beta}$ Vector Considered Jointly	182
	7.2.2c	An Example of Joint Confidence Intervals	184
	7.2.3	Interval Estimation of $\sigma^2$	185
	7.2.4	Prediction Interval Estimates	187
<b>7.3</b>		Hypothesis Testing	189
	7.3.1	The Likelihood Ratio Test	190
	7.3.1a	Distribution of the Ratio of Quadratic Forms	192
	7.3.2	General Linear Hypotheses	195
	7.3.2a	The Restricted Maximum Likelihood Estimator	196
	7.3.3	Single Hypothesis	199
	7.3.4	Testing a Hypothesis about $\sigma^2$	202
<b>7.4</b>		Summary Statement	203
<b>7.5</b>		Exercises	204
	7.5.1	Individual Exercises	204
	7.5.2	Group or Class Exercises	206
<b>7.6</b>		References	206
<b>7.A</b>		Appendix—Some Matrix and Distribution Theorems	207
	7.A.1	Matrix and Vector Differentiation	207
	7.A.2	Matrix Algebra Relevant to Normal Theory	207
	7.A.3	Normal Distributions	209

7.A.4	Chi-square, $t$ , and $F$ Distributions	210
7.A.5	Kronecker Products, Partitioned Inverse and Lag Operators	212
<b>Chapter 8</b>	<b>Bayesian Estimation and Inference for the Normal Linear Statistical Model</b>	<b>214</b>
8.1	The Bayesian Approach	214
8.2	Analysis with a Noninformative Prior	215
8.2.1	Specification of the Noninformative Prior	215
8.2.2	The Joint Posterior Density Function Derived From a Noninformative Prior	217
8.2.3	Marginal Posterior Density Functions from a Noninformative Prior	218
8.2.3a	A Digression on the Multivariate- $t$ Distribution	219
8.2.3b	Marginal Posterior Density for a Single Element of $\beta$	220
8.3	Analysis with an Informative Prior	221
8.3.1	Specification of a Natural Conjugate Prior	221
8.3.2	An Example of a Natural Conjugate Prior	223
8.3.3	Assessment of Informative Priors	227
8.3.4	Posterior Density Functions Derived from an Informative Prior	228
8.3.5	The Example Continued	230
8.4	Point and Interval Estimation	232
8.4.1	Point Estimation	232
8.4.2	Interval Estimation	234
8.5	Hypothesis Testing	236
8.6	Concluding Remarks	242
8.7	Exercises	243
8.7.1	General Exercises	243
8.7.2	Exercises Using Monte Carlo Data	244
8.8	References	245
<b>Part 3</b>	<b>The Generalized Linear Statistical Model</b>	<b>247</b>
<b>Chapter 9</b>	<b>Linear Stochastic Regressor Models and Asymptotic Theory</b>	<b>249</b>
9.1	Independent Stochastic Regressor Model	250
9.1.1	Estimation Procedures	250

9.1.2	Sampling Properties of the Least Squares Estimator	258
9.2	The Problem with a Partially Independent Stochastic Regressor Model	260
9.3	Asymptotic Theory	263
9.3.1	Consistency and Probability Limits	263
9.3.1a	The Probability Limit	265
9.3.1b	Probability Limits of Vectors and Matrices	267
9.3.1c	Least Squares Consistency	268
9.3.2	Asymptotic Distributions	269
9.3.2a	Asymptotic Distribution of a Sample Mean and Least Squares Estimation	271
9.3.2b	The Asymptotic Properties of Maximum Likelihood Estimators	274
9.4	Asymptotic Properties of the Least Squares Estimator for the Partially Independent Stochastic Regressor Model	275
9.5	The Problem With General Linear Stochastic Regressor Models	276
9.6	Instrumental Variable Estimation	279
9.7	Summary	281
9.8	Exercises	282
9.8.1	Algebraic Exercises	282
9.8.2	Individual Numerical Exercises	282
9.8.3	Group Class Exercises	284
9.9	References	284
9.A	Appendix—Multivariate Normal Regressor Model	285

<b>Chapter 10</b>	<b>General Linear Statistical Model with Non Scalar-Identity Covariance Matrix</b>	<b>289</b>
10.1	The Statistical Model	290
10.1.1	The Least Squares Estimator of $\beta$	290
10.1.2	The Generalized Least Squares Estimator	291
10.1.3	An Unbiased Estimator for $\sigma^2$	295
10.1.4	Summary	296
10.2	The Normal Linear Statistical Model	296
10.3	Sampling Distributions of $\tilde{\beta}$ and $\hat{\sigma}_g^2$	298
10.4	Interval Estimators	298

<b>10.5</b>	Hypothesis Testing	300
<b>10.6</b>	The Consequences of Using Least Squares Procedures	300
<b>10.7</b>	Sampling Experiment	302
<b>10.8</b>	Estimation and Hypothesis Testing when $\Psi$ is Unknown	308
	10.8.1 Maximum Likelihood Estimation	310
<b>10.9</b>	Summary	310
<b>10.10</b>	Exercises	311
	10.10.1 Algebraic Exercises	311
	10.10.2 Individual Numerical Exercises	312
	10.10.3 Group Exercises	314
<b>10.11</b>	References	314

**Chapter 11 Disturbance-Related Sets of Regression Equations 315**

<b>11.1</b>	Sets of Equations with Contemporaneously Correlated Disturbances	315
	11.1.1 The Kronecker Product	317
	11.1.2 Estimation with Known Covariance Matrix	319
	11.1.3 Estimation if the Covariance Matrix is Unknown	321
	11.1.3a An Example	322
	11.1.3b A Monte Carlo Experiment	323
	11.1.3c Alternative Estimators of the Covariance Matrix	324
	11.1.3d An Iterative Estimation Procedure	324
	11.1.4 Hypothesis Testing	326
<b>11.2</b>	Sets of Equations with Unequal Numbers of Observations	328
	11.2.1 Theoretical Consequences	328
	11.2.2 An Example	328
<b>11.3</b>	Some Remarks	331
<b>11.4</b>	Exercises	331
	11.4.1 Numerical Exercises	332
	11.4.2 Kronecker Product	332
