

Complementarity and Fixed Point Problems

Edited by M.L. BALINSKI and R.W. COTTLE

R.W. Cottle

B.C. Eaves

I. Kaneko

M. Kojima

C.E. Lemke

O.L. Mangasarian

N. Megiddo

S.R. Mohan

K.G. Murty

J.-S. Pang

R.W.H. Sargent

M.J. Todd

J.A. Tomlin

1978

CONTENTS

Preface	v
Contents	viii
(1) Computing stationary points, <i>B.C. Eaves</i>	1
(2) Some pivot schemes for the linear complementarity problem, <i>C.E. Lemke</i>	15
(3) An efficient implementation of the Lemke algorithm and its extension to deal with upper and lower bounds, <i>R.W.H. Sargent</i>	36
(4) Robust implementation of Lemke's method for the linear complementarity problem, <i>J.A. Tomlin</i>	55
(5) Computational complexity of complementary pivot methods, <i>K.G. Murty</i>	61
(6) Characterization of linear complementarity problems as linear programs, <i>O.L. Mangasarian</i>	74
(7) On solving linear complementarity problems as linear programs, <i>R.W. Cottle and J.-S. Pang</i>	88
(8) Existence of solution rays for linear complementarity problems with <i>Z</i> -matrices, <i>S.R. Mohan</i>	108
(9) The linear complementarity problem with an n by $2n$ <i>P</i> -matrix, <i>I. Kaneko</i>	120
(10) On the parametric nonlinear complementarity problem, <i>N. Megiddo</i>	142
(11) Improving the convergence of fixed-point algorithms, <i>M.J. Todd</i>	151
(12) On the homotopic approach to systems of equations with separable mappings, <i>M. Kojima</i>	170
