Prefac	e to the	e first edition	۱	xv
Prefac	e to the	e second edit	ion	xvii
Acknow	wledge	ements		xviii
List of	illustr	ations and ta	bles	xxi
Chapte	er 1	Introductio	n	1
Chapte	er 2	Requiremen	nts for spacecraft materials	
2.1	Gene	ral backgrou	nd	6
2.2	Meta	llurgical cons	siderations before launch of spacecraft	9
2.3	The e	effect of a spa	ce environment	19
2.4	Mate	rials for space	e launch vehicles	28
Chapte	er 3	The integra	tion of metallurgy into product assurance schemes	
3.1	Gene	ral product as	ssurance and the role of metallurgy	39
	3.1.1	Product a	ssurance management	39
	3.1.2	Quality a	ssurance	40
	3.1.3	Reliabilit	y and safety	41
	3.1.4	Materials	and processes	43
	3.1.5		ent part selection and procurement	45
	3.1.6	Control o	of ground-handling facilities	46
3.2	The 1	netallurgical	laboratory	49
	3.2.1	Major ob	jectives of laboratory	49
	3.2,2	Facilities	and instrumentation	50
		3.2.2.1	Macroscopic examination	50
		3.2.2.2	Microscopic examination	51
		3.2.2.3	Chemical analysis	55
		3.2.2.4	Hardness testing	56
		3.2.2.5	Mechanical testing	57
		3.2.2.6	Thermal cycling systems	58
		3.2.2.7	Corrosion testing	62
		3.2.2.8	Fracture mechanics testing	65

		3.2.2.9	Printed-circuit-board and component assembly	
			evaluations	70
		3.2.2.10	Conventional nondestructive testing (NDT)	72
	3.2.3		f new laboratory techniques for NDT	73
		3.2.3.1	Holographic interface tester	73
		3.2.3.2	Acoustic microscopy	73
		3.2.3.3	High-definition radiography	76
		3.2.3.4	Acoustic emission to monitor damage	
			accumulation in materials and welds	80
		3.2.3.5	Methods for determining residual stress	84
		3.2.3.6	Modern techniques for surface analysis	89
3.3	Preparat		allographic evidence	89
	3.3.1		llographer	89
	3.3.2		y records and reports	90
	3.3.3		of metallurgical data to spacecraft projects	91
	3.3.4		of materials laboratory staff	94
3.4			allurgical failure investigations	95
	3.4.1		r company	95
	3.4.2		ler company	96
	3.4.3	Product li	ability	96
3.5	'Greene	r' spacecra	lft	97
Chapter			bhy applied to spacecraft production	
4.1	Sources	of failure		103
4.2	Drawing	gs and wor	kmanship	104
	4.2.1	Design ar	d manufacturing drawings	104
	4.2.2		ship standards	105
4.3		-	e revealed by microstructure	110
4.4	Hydroge	en emb <del>r</del> ittl	ement	110
	4.4.1		n of metal with hydrogen	110
	4.4.2		embrittlement of spring steel	104
	4.4.3	-	of plated aluminium alloy	113
	4.4.4		ion for titanium hydride precipitates	115
	4.4.5		ment of copper	119
	4.4.6	Future de	velopments	120
4.5	General		problems	120
	4.5.1		c corrosion-related failures	120
	4.5.2	Corrosior	resistance of anodic and chemical conversion	
		coatings of	on Al 2219 alloy	127
		4.5.2.1	The alloy 2219	127
		4.5.2.2	Surface protection treatments	129
	4.5.3	Evaluatio	n of Alodine finishes on common spacecraft	
		aluminiu	n alloys	130
	4.5.4	Cleaning,	passivation, and plating of spacecraft steels	133
	4.5.5	Launch si	te corrosion	134
4.6	Stress-c	orrosion re	sistance of metals	134
	4.6.1	Stress-con	rrosion cracking	134
	4.6.2	SCC eval	uation	136
	4.6.3	The prope	erties of spring materials having a high resistance	
		to SCC		137

÷

4.7	Control	of printed circuit boards	144
	4.7.1	Chemical composition from microstructure	144
	4.7.2	Grainy solder coverage on PCBs and the effects of rework	153
	4.7.3	Evaluation of multilayer board internal connections	162
	4.7.4	Flexible circuits	170
	4.7.5	Hot-air-levelled circuit boards	173
4.8	Control	of composite materials	175
	4.8.1	Metal-matrix composites for space structures	175
	4.8.2	Composite contact devices	180
	4.8.3	Fibre-reinforced plastic composites	182
	4.8.4	Fibre-reinforced glass ceramics	187
	4.8.5	Carbon-carbon composites	188
4.9	Control	of capillary screens	188
4.10		ation of electroless nickel deposits	190
	4.10.1	Microcracked electroless nickel	190
	4.10.2	Electroless nickel plating of aluminium electronic housing	193
4.11		of electroforming processes	195
		zing of aluminium alloys	198
		rations for the assembly of subsystems by welding	
	4.13.1	General welding methods and controls	
	4.13.2	Electron beam welding	
	4.13.3	Laser beam welding	
	4.13.4	Explosive welding	
	4.13.5	Welding of aluminium–lithium alloys	
4.14		of power system weldments	
	4.14.1	General	
	4.14.2	Welded solar arrays.	
	4.14.3	Suitability of welded battery cells	
4 1 5		associated with residual stresses in weldments	
		nagnetic emission from TIG welding equipment	
4.17		n aluminides for high-temperature applications	
		nemory alloys for spacecraft devices	
		aluminium for damping purposes	
		astic forming and diffusion bonding of metals	
4.20	4.20.1	• •	
	4.20.2	Diffusion bonding	
	4.20.2	Superplastic forming and diffusion bonding in one operation	
4 21		g of mechanical parts	240
4.21	4.21.1	General background	240
	4.21.2	Metallic surfaces	244
	4.21.2	Cleaning of individual parts	244
	4.21.3	Cleaning of metallurgically joined assemblies	249
		Maintenance of cleanliness	
	4.21.5		256
Chapte	-5 M	letallography applied to spacecraft test failures	
5.1		tion of electron microscope	258
J.1	5.1.1	SEM examination of fracture surfaces	258
	5.1.2	TEM examination of metallic failures	258
5.2	J.1.2 Fastener		
5.2	5.2.1	Spacecraft fasteners	
	J.2.1	Spacestant tastemens	203

	5.2.2	Fastener failure due to forging defect	269
	5.2.3	Laps and surface irregularities in threads	271
	5.2.4	Hydrogen embrittlement of steel fasteners	271
	5.2.5	Embrittlement of titanium alloys	273
	5.2.6	Galvanic corrosion of fasteners	273
	5.2.7	Contamination from organic fastener lubrication systems	274
	5.2.8	Metallic particle generation	275
	5.2.9	Quality assurance controls for fasteners	278
5.3		history from microstructure	284
5.4		f inclusions within the microstructure of explosively deformed	
	material		265
5.5		tion of passive thermal control systems	289
0.0	5.5.1	General background	289
	5.5.2	Low-emissivity	291
	5.5.3	High-absorption surfaces	293
	5.5.4	Rigid optical solar reflectors	295
	5.5.5	Flexible second surface mirrors	295
5.6		tion of metals	297
5.0	5.6.1	General	297
	5.6.2	Sublimation of and condensation of cadmium and zinc	301
	5.6.3	Heater sublimation problem associated with thruster motor	303
	5.6.4	Sublimation of klystron cathode-heaters	309
	5.6.5	Sublimation of rhenium	309
5.7		m for spacecraft applications	314
5.1	5.7.1	General	
	5.7.2	Health and safety	314
	5.7.3	Integrity of machined beryllium	
	5.7.3 5.7.4	Thermal cycling on work-hardened beryllium	
	5.7.5	General etching solutions for beryllium	318
	5.7.6	Investigation of microcracked thin-foil detector windows	319
	5.7.7	Aluminium-beryllium alloys	325
5.8		ation of catalyst particles for hydrazine decomposition	325
5.0	5.8.1	Testing procedure	326
	5.8.2	Material investigation	
	5.8.2	Mechanism of particle deactivation	
5.9		e emitter degradation	
		ation of a failed spacecraft antenna	
	-	aron of a range spacecraft antenna	338 342
		÷	348
J.12	5.12.1	elding of mechanisms	348
	5.12.1		350
	5.12.2	Cold-welding due to cyclic impact loading	352
5 12		Cold-welding due to fretting	
5.13		inant particles—identification of their sources	353 356
		•	
5.15		contaminations	356 356
	5.15.1	General	
	5.15.2		363
	5.15.3	Contamination of Invar moulding tool	363
5 1 4	5.15.4	Removal of silicone polymers	365
3.10	wagnet	ic problems	366

5.17	Therma	l stress-induced dimensional changes	368
	5.17.1	General problems	368
	5.17.2	Stress-relaxation by thermal gradients	368
	5.17.3	Thermally induced vibrations	
5.18	Defects	in titanium piece-parts	375
	5.18.1	General	375
	5.18.2	Alpha-case embrittlement	375
	5.18.3	Titanium hydride embrittlement	376
5.19	Leaking	water tank on launcher	377
	-		
Chapter	:6 Fa	ailure analysis of electrical interconnections and	
	re	commended processes	
6.1	Materia	l problems	381
6.2	Welded	lead wire interconnections	382
6.3	'Purple	plague'	385
6.4	Mechan	ical electrical connections	391
	6.4.1	General	391
	6.4.2	Wire-wrapped connections	394
	6.4.3	Crimped joints	395
6.5		d interconnections	402
	6.5.1	Introduction to soldering	402
	6.5.2	Inspection of soldered joints	403
	6.5.3	Effect of thermal fatigue on solder-assembled leaded	
		components	404
	6.5.4	Effect of thermal fatigue on leadless components	416
	6.5.5	Effect of thermal fatigue on semi-rigid cable connections	421
6.6	Problem	as associated with coatings for soldering applications	421
	6.6.1	The need for coatings	421
	6.6.2	Surfaces that can be 'soldered to'	421
	6.6.3	Surfaces that can be 'soldered through'	425
6.7	The use	of indium solder alloys	431
6.8	Wires a	nd cables	436
	6.8.1	Selection of plated finish on copper conductors	436
	6.8.2	Effect of ageing on the solderability of tin-plated and	
		silver-plated wires	438
	6.8.3	'Red plague' corrosion of silver-plated copper	446
	6.8.4	Manganin wire	447
	6.8.5	High-voltage wires, cables, and connections	449
6.9	Problem	ns associated with soldering fluxes	450
	6.9.1	Purpose of a flux	450
	6.9.2	Heat-shrinkable sleeves containing solder preforms	450
	6.9.3	Stress corrosion of component lead material	451
	6.9.4	Flux-corrosion of silver-plated stranded wires	455
	6.9.5	Selection of a soldering flux or a solderable finish	457
	6.9.6	Control of galvanic corrosion	457
	6.9.7	Cleaning of flux-contaminated surfaces	462
	6.9.8	Flux ingress into PCB surfaces	464
	6.9.9	Potential health hazards in the electronic assembly area	467
6.10	Problen	ns associated with brazing	470
	6.10.1	Design considerations	470

!

	6.10.2	Brazeability of materials and braze alloy compositions	470
	6.10.3	Brazing fluxes and their removal	475
	6.10.4	Atmospheres for brazing	476
	6.10.5	Safety precautions	476
	6.10.6	Product assurance applied to brazing operations	478
	6.10.7	Inspection criteria for brazed aluminium alloy	
		waveguide-to-flange joints	479
6.11	Diffusio	on soldering/brazing	482
6.12	Effects	of rework and repair on soldered interconnections	483
	6.12.1	General	483
	6.12.2	Cosmetics of solder fillets	484
	6.12.3	Effect of rework on electronic components.	485
	6.12.4	Effect of rework on plated-through holes	486
	6.12.5	Effect of rework on composition of joint	486
	6.12.6	Recuperation of unsolderable PCBs and component leads	488
6.13		tive adhesives	488
6.14	Training	g and certification	492
	6.14.1	General	492
	6.14.2	Certification for electronic assembly techniques	492
	6.14.3	Understanding process-induced failures	493
6.15	Verifica	ation of surface-mount technology and prevalent failure	
	mechan	isms	494
	6.15.1	Verification testing	494
	6.15.2	Failure under mechanical overloading	497
	6.15.3	Failures due to board flatness problems	497
	6.15.4	Failure due to coplanarity problems	501
	6.15.5	Solder joint failure due to thermal mismatch between SMD	
		and substrate	501
	6.15.6	Conductor track failure due to thermal mismatch	505
	6.15.7	Failure of RF cables connected by SMT	505
	6.15.8	SMT solder joint failure due to conformal coatings	505
	6.15.9	SMT problems related to flux and its residues	513
Chapte	r7W	/hisker growths	
7.1		blem of whisker growth	515
7.2		s of failures due to whisker growth	516
	7.2.1	Molybdenum whiskers on metallized miniature circuits	516
	7.2.2	Tungsten whisker growth within travelling wave tubes	520
	7.2.3	Metal oxide whisker precipitation in glass seals	521
	7.2.4	Aluminium whisker growth on IC conductors	525
7.3	Tin whi	sker growths	517
	7.3.1	Tin whisker growth on a plated steel housing	517
	7.3.2	Tin whisker growth on PCBs	536
	7.3.3	Tin whisker growth on crimp termination devices	538
	7.3.4	The mechanism of growth and properties of tin whiskers	542
7.4	Precauti	ions to avoid whisker growths	547
Chara 4			
		ssessment of post-flight materials	449
8.1	General		449 449
	8.1.1	Hardware returned from space	449

	8.1.2	Raw materials from the Moon	550
••	8.1.3	Recent investigations using retrieved materials	551
8.2	-	nvironmental effects from vacuum and radiation	552
	8.2.1	Organic materials and lubricants	552
	8.2.2	Radiation effects	554
	8.2.3	Effects of vacuum on metals	555
8.3	-	ature cycling	558
8.4		eteoroids and debris	560
8.5			565
8.6		ators and heat shield materials	572
	8.6.1	General examples	572
	8.6.2	Beryllium as a heat shield	574
	8.6.3	Alternative heat shield materials	577
	8.6.4	High-temperature fasteners	580
8.7	Manned	compartments	583
Append	ices		592
