CONTENTS

PREFACE	vii
CHAPTER 1. NONARCHIMEDEAN FIELDS	
1. Many-sorted structures	1
2. Nonarchimedean groups.	5
3. Nonarchimedean fields	8
4. Fields with valuation.	14
5. Development of metric	18
6. Hardy fields	28
7. The field \mathcal{L}	31
CHAPTER 2. NONSTANDARD ANALYSIS	
1. The method of mathematical logic	35
2. The languages of \mathcal{R} and ${}^*\mathcal{R}$	40
3. Filters	43
4. The ultrapower construction	47
5. Proof of Łoś's Lemma	50
6. ${}^*\mathcal{R}$ is sequentially comprehensive	53
7. Principles of permanence	56
8. Continuity in \mathcal{R}	61
9. Internal functions.	65
10. Continuity in ${}^*\mathcal{R}$	68
CHAPTER 3. THE FIELD ${}^\rho\mathcal{R}$	
1. Maximal ideals	76
2. The field ${}^\rho\mathcal{R}$	77
3. Valuation	79
4. Convergence	84
5. Series	87
6. ρ -series	90
7. Iotas and megas	94

CHAPTER 4. FUNCTIONS IN ${}^{\rho}\mathcal{R}$	
1. The function concept	100
2. More functions.	104
3. Continuity	107
4. S-continuity	110
5. Functions ${}^{\rho}f$ and continuity	113
6. Differentiation	117
CHAPTER 5. EULER–MACLAURIN EXPANSIONS.	118
1. Introduction	118
2. The Euler–Maclaurin Formula	121
3. Some examples.	130
CHAPTER 6. ASYMPTOTIC EXPANSIONS – THE FORMAL CONCEPT	
1. Asymptotic sequences; asymptotic expansions	137
2. Asymptotic power series	144
3. Nonstandard criterion for asymptotic expansions	153
4. Watson’s Lemma	161
5. Other scales	165
6. A generalized criterion for asymptotic expansions	168
CHAPTER 7. POPKEN SPACE	
1. Asymptotically finite functions	172
2. Convergence.	175
3. Norm	179
4. Algebraic properties of the norm	185
5. Popken’s description of the norm	187
6. More properties of \mathcal{P}	190
7. Asymptotic expansions in \mathcal{P}	195
8. More about norms	198
BIBLIOGRAPHY.	199
INDEX	201
