SPACE ADMINISTRATION

Contents

	PAGE
Introduction to STP 463—W. F. BROWN, JR.	1
Progress in Fracture Testing of Metallic Materials—J. G. KAUFMAN.	3
Theory.	4
Initial Recommendations.	4
Thickness as a Problem.	7
Fatigue Cracking.	8
Emphasis on Thick Sections.	9
Evolution of Notched Bend Specimens.	12
Compact K_{IC} Specimen.	15
Screening Tests.	15
Thin-Section Problem.	18
Medium-Strength Materials.	18
Cautionary Notes.	18
Summary.	20
Evaluation of a Method of Test for Plane Strain Fracture Toughness Testing Using a Bend Specimen—R. H. HEYER AND D. E. MC CABE	22
Pilot Program.	23
Interlaboratory Tests.	23
Fatigue Cracking.	24
Bend Testing.	30
Analysis of K_{IC} Data.	33
Conclusions.	40
British Experience with Plane Strain Fracture Toughness (K_{IC}) Testing— M. J. MAY	42
Collaborative Test Program.	43
First Stage.	43
Second Stage.	44
Standardization of K_{IC} Testing.	47
Influence of Fatigue Precracking Conditions.	47
Crack Length-Specimen Thickness Requirements.	51
Draft British Standard.	61
Summary.	61
Discussion.	62
The Influence of Crack Length and Thickness in Plane Strain Fracture Tough- ness Tests—M. H. JONES AND W. F. BROWN, JR.	63
Material and Specimen Preparation.	66
Test Procedure.	67
Analysis of Data.	68
Bend Specimens.	68
Smooth Specimens.	71
Results for Effects of Thickness and Crack Length.	72
Screening Tests for K_{IC}	77
Correlation of K_{IC} with Tensile Properties.	84
Practical Significance of Results.	85
Appendixes.	88
Discussion.	92

	PAGE
Crack Toughness Testing of High-Strength Steels—E. A. STEIGERWALD	102
Notch Bend Tests	107
K_{IC} Data for High-Strength Steels	113
Summary and Conclusions	115
Discussion	121
Slow Bend K_{IC} Testing of Medium-Strength High-Toughness Steels—S. T. ROLFE AND S. R. NOVAK	124
Materials and Procedure	125
Specimen Geometry and Analysis	128
Results and Discussion	131
K_{IC} Values	131
Pop-in Criteria	133
Specimen Size Requirements	139
Effects of Stress Level During Fatigue Cracking	144
Effect of Face Notching	145
Correlation Between K_{IC} and CVN Values	145
Summary and Conclusions	147
Application of Fracture Mechanics Technology to Medium-Strength Steels—W. G. CLARK, JR., AND E. T. WESSEL	160
Information Required in Fracture Mechanics Technology	161
Material Properties	162
Discussion of Materials Properties	172
Example Problem	177
General Stress Analysis	180
Calculation of Critical Flaw Sizes	180
Calculation of Cyclic Life	182
Material Selection	184
Development of Inspection Criteria and Safety Factors	185
Summary	186
Discussion	188
Fractographic Analysis of the Low Energy Fracture of an Aluminum Alloy—J. P. TANAKA, C. A. PAMPILLO, AND J. R. LOW, JR.	191
Material	192
Fractographic Study	193
Failure of Large Inclusions	196
Transmission Electron Microscopy	200
Identification of Void-Nucleating Particles	204
Discussion	207
Fractographic Observation of Boundary Between Fatigue Crack and Dimpled Rupture	210
Conclusions	214
Appendix	214
Commentary on Present Practice—W. F. BROWN, JR., AND J. E. SRAWLEY	216
Specimen Size Requirements	217
Fundamental Concepts	219
Effects of Plastic Deformation in K_{IC} Tests	221
Face Grooving	226
Specimen Preparation and Test Procedure	227
Crack Starter Configuration and Displacement Gage Length	227

	PAGE
Fatigue Cracking	228
Nonuniformities in Fatigue Cracks	228
Fatigue Crack Sharpness Requirement	229
Testing of Brittle Material	231
Comparison of Plane Strain Fracture Toughness of Various Alloys	232
Correlation of K_{IC} with Other Properties	238
Correlation with Tensile Properties	238
Tensile Ductility in Material Specifications	240
Correlation with Impact Properties	241
Fracture Tests with Subsize Specimens (Screening Tests)	243
Material Selection for Particular Applications	244
Acceptance Tests	244
Alloy Development Tests	246
Tentative Method of Test for Plane Strain Fracture Toughness of Metallic Materials (ASTM Designation: E 399-70 T)	249
