

57.2.1. 78
57.2.1. 58.1.1.

STRUCTURED DESIGN:
Fundamentals
of a Discipline
of Computer Program
and Systems Design

PREFACE	xi
FOREWORD	xv
SECTION I CONCEPT	1
1 TOWARD PROGRAM ENGINEERING	3
1.1 What Is Structured Design?	4
1.2 Objectives of Structured Design	8
1.3 Design Constraints, Trade-Offs, and Decisions	13
1.4 Summary	15
References	15
2 BASIC CONCEPTS OF STRUCTURED DESIGN	17
2.1 How Do We Achieve Minimum-Cost Systems?	18
2.2 How Does Structured Design Lead to Minimum-Cost Systems?	21
2.3 The Concept of Black Boxes	22
2.4 Management Parallels with Structured Design	25
2.5 A Collection of Useful Terms	28
2.6 Summary	29

3	THE STRUCTURE OF COMPUTER PROGRAMS	30
3.1	Programs and Statements	30
3.2	The Statement Structure of Computer Programs	32
3.3	The Linguistics of Modularity	33
3.4	Normal and Pathological Connections	39
3.5	Data Flow Graphs	43
3.6	Summary	46
	Reference	47
4	STRUCTURE AND PROCEDURE	48
4.0	Introduction	48
4.1	Flowcharts and Structure Charts	50
4.2	Interactions of Procedure and Structure: An Example	58
4.3	Summary	64
	SECTION II FOUNDATION	65
5	HUMAN INFORMATION PROCESSING AND PROGRAM SIMPLICITY	67
5.1	The Economics of Systems Development	67
5.2	The Fundamental Theorem of Software Engineering	68
5.3	Complexity in Human Terms	73
5.4	Summary	82
	References	83
6	COUPLING	84
6.0	Introduction	84
6.1	Factors that Influence Coupling	86
6.2	Common-environment Coupling	98
6.3	Decoupling	99
6.4	An Application	101
6.5	Summary	104
7	COHESION	105
7.0	Introduction: Functional Relatedness	105
7.1	Levels of Cohesion	108
7.2	Comparison of Levels of Cohesion	130
7.3	Measurement of Cohesion	132
7.4	Implementation and Cohesion	137
7.5	Summary	140
	References	140
	SECTION III TECHNIQUE	143
8	THE MORPHOLOGY OF SIMPLE SYSTEMS	145
8.0	Introduction: Organization and Morphology	145

8.1	Organization of Modular Systems	146
8.2	Specific Models of Systems Organization	148
8.3	Factoring	150
8.4	Afferent, Efferent, Transform, and Coordinate Flow	151
8.5	Systems Morphology	155
8.6	Transform-centered Morphology	162
8.7	Summary	164
	References	164
9	DESIGN HEURISTICS	165
9.0	Introduction	165
9.1	Module Size	166
9.2	Span of Control	171
9.3	Fan-in	172
9.4	Scope of Effect/Scope of Control	175
9.5	Summary	185
	References	186
10	TRANSFORM ANALYSIS	187
10.0	Introduction	187
10.1	The First Step: Restate the Problem as a Data Flow Graph	188
10.2	The Second Step:	
	Identify the Afferent and the Efferent Data Elements	192
10.3	The Third Step: First-level Factoring	194
10.4	The Fourth Step:	
	Factoring of Afferent, Efferent, and Transform Branches	195
10.5	The Fifth Step: Departures	197
10.6	General Comments on Factoring	200
10.7	Termination	203
10.8	An Example: The FRANK System	204
10.9	Summary	222
11	TRANSACTION ANALYSIS	223
11.0	Introduction	223
11.1	Transaction Analysis Strategy	225
11.2	An Example of Transaction Analysis	229
11.3	Special Considerations in Transaction Processing	239
11.4	Summary	244
	Reference	244
12	ALTERNATIVE DESIGN STRATEGIES	245
12.0	Introduction	245
12.1	The Data-structure Design Method	246
12.2	The Parnas Decomposition Criteria	251
	References	255

SECTION IV	PRAGMATICS	257
13	COMMUNICATION IN MODULAR SYSTEMS	259
13.0	Introduction	259
13.1	An Overview of the Pathological Connection Problem	260
13.2	Types of Pathological Data Connections	266
13.3	Justification of Pathological Communication	269
13.4	Suggestions for Minimizing Coupling in Pathological Connections	273
13.5	Summary	274
	References	274
14	PACKAGING	276
14.0	Introduction	276
14.1	Procedural Analysis	277
14.2	Packaging in Practice	282
14.3	Summary	289
	Reference	289
15	OPTIMIZATION OF MODULAR SYSTEMS	290
15.0	Introduction	290
15.1	Philosophies of Optimization	291
15.2	An Approach to Optimization of Modules	295
15.3	Structural Changes for Efficiency	296
15.4	Summary	304
	References	304
SECTION V	EXTENSIONS	305
16	A TYPOLOGY OF SYSTEMS COMPONENTS	307
16.0	Introduction	307
16.1	Activation Characteristics	308
16.2	Common Types of Modules	311
16.3	Summary	316
	Reference	317
17	RECURSIVE STRUCTURES	318
17.0	Introduction	318
17.1	Functional Recursion	319
17.2	Recursion by Design	321
17.3	Recursion by Accident	325
17.4	Summary	330
	References	330

18	HOMOLOGOUS AND INCREMENTAL STRUCTURES	331
18.0	Introduction	331
18.1	Homologous Systems	332
18.2	Incremental Modules	332
18.3	Applications of Coroutines and Subcoroutines	338
18.4	Data-coupled Systems and Languages for Modular Systems	348
18.5	Summary	349
	References	350
 SECTION VI THE REAL WORLD		 351
19	STRUCTURE AND PROGRAM QUALITY	353
19.0	Introduction	353
19.1	Generality	353
19.2	Flexibility	356
19.3	Software Reliability	362
19.4	Software Redundancy	371
19.5	Structure of Fault-handling Processes	373
19.6	Summary	374
	References	374
20	IMPLEMENTATION OF MODULAR SYSTEMS	375
20.0	Introduction	375
20.1	Basic Approaches to Implementation	376
20.2	Advantages of Top-down Implementation	381
20.3	Bottom-up Development	389
20.4	Variations on the Top-down and Bottom-up Approaches	390
20.5	Summary	394
	References	394
21	THE MANAGEMENT MILIEU	395
21.0	Introduction	395
21.1	The Impact of Management Decisions on the Technical Aspects of a Project	396
21.2	Management Benefits of Prior Structural Design	402
21.3	Personnel Management for Implementing Modular Systems	404
21.4	Summary	406
	References	406

APPENDICES	409
A. STRUCTURE CHARTS: A GUIDE	409
I. Explanation of Symbols in Structure Charts	410
II. Relationships of Structure Charts to Other Program Models	422
Explanatory Notes	435
B. SUMMARY OF STANDARD GRAPHICS	
FOR PROGRAM STRUCTURE CHARTS	437
GLOSSARY	445
INDEX	485
