**The Historical Development
of
Quantum Theory**

VOLUME 1

Part 2

**The Quantum Theory of
Planck, Einstein, Bohr and Sommerfeld:
Its Foundation and the Rise of Its Difficulties
1900–1925**

Springer-Verlag

New York Heidelberg Berlin

Contents

Preface	ix
Acknowledgements	xlv
Prologue	3
Chapter I Quanta and Molecules: The Quantum Theory of Planck, Einstein and Nernst	23
I.1 The Law of Blackbody Radiation	24
I.2 The Significance of the Constants in Planck's Law	45
I.3 Fluctuations and Light-Quanta	59
I.4 Energy-Quanta and the Derivations from Classical Theories	83
I.5 The Search for Other Quantum Phenomena	99
I.6 Specific Heats, New Quantum Hypotheses and the First Solvay Conference	113
I.7 The Consolidation of Quantum Theory	136
Chapter II The Bohr–Sommerfeld Theory of Atomic Structure	155
II.1 The Spectra of Atoms and Molecules: The Empirical Foundations	156
II.2 Ideas Towards a Model of Atomic Structure	168
II.3 Niels Bohr and the Origin of the Quantum Theory of Line Spectra	181
II.4 Atoms as Conditionally Periodic Quantum Systems	200
II.5 Three Principles of Atomic Theory	230
Chapter III The Bohr Festival in Göttingen	259
III.1 The Göttingen Tradition of Mathematics and Physics	262
III.2 The Continuity of the Tradition: Richard Courant, Max Born and James Franck in Göttingen	287
III.3 Progress in Atomic Models from 1913 to 1921	313
III.4 Bohr's Wolfskehl Lectures and the Theory of the Periodic System of Elements	332
III.5 Immediate Impact and Triumph of Bohr's Theory of the Periodic System of Elements	358

Chapter IV The Mechanical and Spectroscopic Failures of Atomic Models	375
IV.1 Wolfgang Pauli's Background and Early Scientific Work	376
IV.2 The Helium Atom and Other Few-Body Problems	396
IV.3 The Magnetic Anomaly and the Stern–Gerlach Effect	422
IV.4 The Anomalous Zeeman Effect	445
IV.5 The Breakdown of the Bohr–Sommerfeld Theory: Anomalous Zeeman Effects and the Crossed-Field Problem	485
Chapter V The Problems of Radiation Theory	511
V.1 The Proof of the Light-Quantum Hypothesis	512
V.2 The Bohr–Kramers–Slater Theory of Radiation	532
V.3 Bose's Light-Quantum Statistics and Its Extension to Gas Theory	554
V.4 The Phase Waves Associated with Matter	578
V.5 The Status of the Radiation Problem in 1925	604
Chapter VI New Methods and Concepts in Atomic Theory	629
VI.1 The Dispersion-Theoretic Approach	630
VI.2 Atomic Structure and the Problem of Closed Electron Shells	652
VI.3 The Rule for Equivalent Electrons: Pauli's Exclusion Principle	671
VI.4 The Discovery of Electron Spin	684
Epilogue	711
References	727
Author Index	862
