## CONTENTS

Preface List of Basic Symbols	vii xi
Introduction	1
<ol> <li>Mathematical Analysis in Economic Theory</li> <li>Scope of Mathematical Economic Theory</li> <li>Appeal to Convexity</li> <li>Orientation for Chapters</li> </ol>	1 2 3 4
Chapter 1. Mathematical Theorems on Convexity	6
<ol> <li>Euclidean Spaces</li> <li>Convex Sets in R<sup>n</sup></li> <li>Separation Theorems for Convex Sets</li> <li>Fixed-Point Theorems</li> <li>Homotopy and Extension Theorems</li> </ol>	6 15 26 53 74
Chapter 11. Simple Multisector Linear Systems	87
<ol> <li>Leontief's Input-Output Systems, Matrix Multipliers</li> <li>Frobenius-Perron's Theorem</li> <li>Imprimitivity and Oscillatory Behavior</li> <li>Other Linear Systems</li> </ol>	87 100 108 132
Chapter III. Balanced Growth in Nonlinear Systems	149
10. The Solow-Samuelson-Type Relative Stability Theorems 11. Income Propagation under Autonomous Spending	149 162

Chapter IV. Efficient Allocation and Growth	180
12. Production Technology Sets	180
13. Theorems on Self-Sustained Efficient Growth	194
14. A Consumption Turnpike Theorem	220
Chapter V. The Working of Walrasian Competitive Economies	234
15. Allocation in Decentralized Systems	234
16. Existence of a Competitive Equilibrium	249
17. Normative Implications of Competition	279
Chapter VI. Special Features of Competitive Economies: Gross	
Substitutability	297
18. Gross Substitutability and Extremization	<b>29</b> 7
19. Stability in Gross Substitutes Systems	335
Chapter VII. The Jacobian Matrix and Global Univalence	355
20. Conditions on the Jacobian Matrix for Global Univalence	355
21. Applications to Special Jacobian Matrices	385
BIBLIOGRAPHY	393
Author Index	399
Subject Index	401
